I have some interest in the filters. You wanna work a trade with a
136B-2 noise blanker (complete and) a 302C-3 with a brand new still
sealed in the box spare meter movement AND directional coupler?

Yes, I am trying to get rid of some spare equipment.

2401. Re: Help in IDing Military TX/RX Mobile Radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-21 00:00:00 UTC
From: "Samuel S. Yates" <ab4n@erols.com>
Message-ID: <34252EBD.4F92@erols.com>
Source record: 116096

This outfit sounds like the TCS Transmitter and Receiver system. They are AM and CW rigs, using a pair of 1625s (12 volt filament 807s) for final amplifiers (about 100 watts) and also using the same tubes as modulators for AM.

These are very popular rigs, extremely sturdy. While I was in the navy, we used them extensively, and I have only seen one or two failures in all that time.

Good luck with your new toys,

Sam Yates, AB4N

I am looking for a good HF rig to begin with in this hobby.
I have experience fixing radios (Navy ET for 10 years).
I want to spend between (500-1000).
I am interested in rtty and CW modes.
I thought it would be easy, but egad there are many radios in them thar hills.
I don't have access to an elmer due to screwy work hours.

I would appreciate any input from someone who has been in this hobby for
awhile.
I admit it I am totally ignorant of what makes a good civilian radio.
Wish I could get RF-130 or urt-23d.

Thankyou in advance.

Humbly yours.

Hi Derick -- Rod here ex AT1 USN.

Well you will get as many recommendations as there are rigs I suspect.
Here is my 2 dB worth. If you are going to run rtty -- get a rig that
has a heavy heat sink on the back and a fan. I have a Kenwood TS-850SAT
and it has these attributes. It will run all day long keyed down. The
finals are rated at 250 Watts -- but Kenwood throttles it back to 100
Watts. Have seen them used for $1000 or less. Lots of other goodies as
well. Keyer, memories, scanning SW coverage, tuners in the SAT model,
speech processor, superb audio, etc.

My friend had a fairly new small transceiver and after 5 minutes or so
of rtty -- it would reduce power drastically.

Many other rigs qualify I'm sure -- but take a look -- has that
quasi-military look and the RF Gain & Audio Gain are on the right side
of the rig for us right-handers. The other guys think we are all
left-handed Yankees, I guess.

Even more Humbly Yours
Rod in San Diego

2410. Big Mod Xfmr Info?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-21 00:00:00 UTC
From: Brian Sherrod <kj5ag@alltel.net>
Message-ID: <34258C41.F7AF3DE4@alltel.net>
Source record: 116105

I aquired a large modulation transformer about four years ago and would like to see if anyone might know anything about it. I believe it was built by the Canadian Marconi Company. The numbers shown on it are C.M.C. 130-256.

This xfmr is liquid filled, I assume for cooling purposes. The case is sealed and is about 13" x 10" x 8" and weighs about 90 lbs or so. It is equiped with a handle on the top.

I would like to find the turns ratio and/or primary and secondary impedance.
Is C.M.C. still in business? If so, do they have a web site?

Thanks Much!

2415. Re: Johnson Viking Valiant info please

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-21 00:00:00 UTC
From: rstevens@voicenet.com
Message-ID: <604ao8$e37$1@news3.voicenet.com>
Source record: 116110

While the "fix the stock culprits first" approach is a good one, my favorite mod addresses BOTH the VFO drift and the audio constipation problems that seem to plague most Valiant owners. In the VFO, as in all Johnson VFO's, the screen dropping resistor is undersized at 2 watts (18K, I believe). Change it to 5 watts and move it underneath the chassis. Also, if you DO elect to trash the clipper/filter, you can still leave the filter inductor in place if you ever want to reinstate it, but freeing up the 7-pin 6AL5 socket next to the VFO gave me a logical place to relocate the VR tube in the VFO (also a major heat generator). Now my Valiant drifts little, compared to my Viking 500, which just seems to keep creeping down the band, regardless of time-on-air. Got to do something there. Anyway, just thought I'd open up your options a bit. Of course, a lot has to do with your choice of microphone, and if you go the D-104 route, the value of the grid resistor in the first stage--3.3 Meg is OK, 10 Meg is better, although some claim to use the preamp that comes with today's D-104's effectively (I can't stand it).

Interestingly, the Greek root of the word opinion is opinios, meaning the stoppage of thought. Hmmm--I think I have a new quote for my signature.

I've never known of any 120 (110) volt Variac or similar unit that could work on 240 also. If you did that, you would have a nice fire ball. Actually, the taps on a 0-120 volt Variac or Superior Powerstat are to alter the range from 0-120 volt in to 0-120 variable out or set it up for 120 volt in and 0-140 volt out. A unit rated at 240 volt could of course be used at 110-20 volt service, but not the other way without dire consequences (the unit will burn up).

Central Lab Model 20 A
Multiphase Exciter
10 - 160 Meters

Circa 1954.
SSB, AM, PM, CW, and VOX operation.

Weight: 32 POUNDS - Unboxed

Manual with schematic, includes operating, alignment,
Block Diagrams and Sample Waveforms.

Tubes: 6AL5, 6U8, 6BA7, 12BH7, 5U4GA
12AT7 - (qty 3), 6AG7 - (Qty 2)
6E5 - RF Indicator

Rear Panel VFO - 8 pin Octal, SO239 Coax Antenna
Connectors Screw-terminals for ANT & GND
VOX sensitivity control pot.
Ten point Terminal Strip
Fuse Holder and Audio 1/4" Jack

Front Panel Carrier Level, Indicator Level (pots)
Controls Indicator Fnction - Set Max Level/Carrier Null
Mixer Tuning Band Amplifier Tuning
(1.8-29 10-160 1.8-29)
Speech Level, Carrier Null {A&B}(pots)
Modulation-SB1, SB2, AM, PM, CW (switch)
Carrier Level - Min to Max - Graduated Pot
VFO-XTAL Switch and XTAL Socket (FT-243)
Operation-VOX, STBY, CAL, STBY, MAN (switch)
Power Switch, RF Indicator (6E5 "Tuning Eye")
AF Input. Key, Phones - (1/4" Jack)
Mic - Amphenol Microphone Connector)

Overall Good to very Good - Paint has chipping on top of
Cosmetic front panel. Front Panel very good, all labels
Condition visable with little signs of wear. Scribe marks
on Mixer and Amplifier Tuning Scales, as well as
around "SB1" label on Modulation Label.

Thruline Wattmeter, Model 4314 by Bird Electronic Corp.

Factory production model, not a type 43 with an aftermarket kit. 26 page manual (reprint) with sections for intro, prep, operating, maint., trouble shooting, calibration, repair and replacement parts listing.

The unit is the same size and shape as a model 43, and has 2 additional controls near the bottom of the front under the element cavity; one is for battery test, and the other is for peak reading, which allows use of the meter as an average power reading instrument also. Pain color is light gray, ID plate on top of unit with model and serial #, spare element storage holes on both sides, fuse holder and AC input, N connections input and output. Rubber feet on both bottom and back, 110/220 input selector switch on back.

Shows definite sign of use. Has paint chips on front, and one side has paint sanded away on small area for an inventory control number to be engraved, which is still visable.

$ 250.00, with the manual and charging cable for charging internal battery from AC.

------ OR -----------

Will consider trades. Looking for good EPROM programmer, 2006 scanner, tube tester, R-417 receiver, Basic Stamp development system, other test equipment, VHF/UHF gear or items related to computer assisted monitoring of equal value.

The following was taken from :

http://www.mnsinc.com/bry/mega/boatanch.htm

courtesy of AF4K.

Massachusetts Surplus

1. Electronics Plus
Littleton, MA
They seem to have a nice selection of chassis, some Jim-Pak,
and some current and obsolete Radio Shack stock. I picked up a
50 uA meter there. Some prices were OK, some not.

2. Electronic Super Store
16 Normac Road
Woburn, MA
(617) 932-6800
You can see their big sign from 128 south from 93 and 128
junction. It is the first exit, Washington street.

3. Eli Heffron & Sons
Cambridge
Maybe it's now:
ELI Incorporated
139 Hampshire Street
Cambridge, MA
(617) 547-4005

4. Linear Electronics
109 Hammond Street
Waltham, MA
(617) 894-7300
Had some 1L6s awhile back.

5. Young Engineering
Shetland Industrial Park (near Pickering Wharf)
Salem, MA
They are located in a HUGE warehouse, and though they don't
stock any true BA's they have a MASSIVE collections of OLD and
NEW test gear, scopes, generators, meters, PARTS galore, wire,
and all kinds of strange devices that are certainly VERY HEAVY.
It's a great place to look around and ogle the old stuff that
they buy off companies that go out of business. Some useful
stuff too.

My town bought four Japanese-made Drake Marker Luxury rigs for
Civil Defense radio work in the 1970s. The selectivity was wide
and the radios were somewhat prone to intermod.

If I recall, the final amp uses a vacuum tube.

Source record: 115994

I acquired an old SENCORE Tube Tester that works great, but some of the tube sockets appear to be worn out. They are riveted to the chassis, so I will drill them out and replace them if I can find something to replace them with.

What I need are three each, 7-pin and 9-pin miniature, such as 6GK6, 6AL5, 12BA6, etc. This tester has multiple sockets for the same base, to account for filament pin assignments (I presume).

If you can assist me, please let me know how much $$ I need to send you to ship them to Northern Virginia, zip code 22701.

Thanks for your help,

Sam Yates, AB4N
Culpeper, VA 22701

2441. Heath HW101 sidetone - too loud!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-22 00:00:00 UTC
From: jwg6@cornell.edu
Message-ID: <jwg6-2209972033520001@cu-dialup-0108.cit.cornell.edu>
Source record: 116000

Can anybody advise me as how best to reduce the sidetone volume on an HW101?

The rig was not designed with provision for adjusting this (AFAIK), and it is way too loud.

There is a 1-megohm resistor from the sidetone-oscillator feeding the AF amp for cw monitoring purposes. I doubled this to 2 megohms and the volume drops somewhat, but adding further resistance in there makes no more difference.

Have a 1-megohm pot that I was thinking of putting in there with some series resistance, to replace the 1-megohm fixed resistor. Dunno if this will work. Any suggestions??

Please reply directly, and thanks very much...

73,

Joel N1AEP

2446. What is a"BOATANCHOR" ??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-23 00:00:00 UTC
From: bry@REMOVE.mnsinc.com
Message-ID: <34271a9f.5124612@news.mnsinc.com>
Source record: 116005
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.misc,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,uk.radio.amateur,rec.radio.swap,rec.radio.shortwave

What is a"BOATANCHOR" ??

Note the spelling. It is NOT Boat Anchor!!

Older radio equipment. Military transmitters and receivers
particularly seem to weigh a TON!
Older amateur radio equipment is qiote often described as a "B.A." or
a boatanchor. Heaby, no one wants it! It may need repair. So the
average appliance operator will not mess with it. That UNUSUAL guy
among unusual hobbyists is the "BA OP" who loves to shine the front
panel of a GLOBE KING or a an R-390A!! There are thousands of them out
there! They lurk at hamfests and in basements!

The BAs themselves are old, dusty, and they GLOW IN THE DARK!!
Because they use tubes and heavy iron. They get the job done in a
noble way! They sound "FB on AM, OM!!" They simply SING on CW!

The people who love and collect these old beasts have a number of
haunts on the web! Among them a FREE Reflector at TEMPE jsut called
Boatanchors, or informally known to some as "Free Boatanchors."

No they don't always have FREE RADIOS, but it is a FREE list as
opposed to being a PAY list like the other one!

So, IF you would like to try the FREE LIST, here is how to subscribe:

Simply send a message to:
LISTSERV@LISTSERV.TEMPE.GOV

with NO SUBJECT, and the text:

subscribe boatanchors <your full name>

Well, you don't have to subscribe to the rec.radio.amateur.boatanchors news group. You just use it.

You're probably thinking of the boatanchors (at theporch) mail reflector. The reflector is well worth the annual subscription price, which I think has risen to $20. You subscribe (on a trial basis to see if you like it or not) by sending mail to

listproc@theporch.com

with no subject and a line of text:

subscribe boatanchors your-name

with your name in the obvious spot.

This reflector has an unusually low noise level (i.e. not much garbage), is relatively flame free, and is populated by people who are willing to share a wealth of knowledge about vintage gear.

Hello everyone..

I would like to purchase a Johnson Ranger in MINT or NEAR MINT condition both cosmetically and electrically. I will pay a premium price for a "collector quality" unit. Should be original (no substantial mods). If you have this radio AND are willing to part with it, please call me collect if you wish at 207-767-5143 and lets do a deal.

Thanks

I have a pair of 25 watt McIntosh monoblock amps that are surplus to my needs.

I am asking $1500.00 OBO for the pair.

They are in excellent condition inside and out.

Description follows.

KS-19602 L1 Tube. Mono. Made for Western Electric Co. ELECTRICAL: 25w.
Response 20-20kHz
(+0.5 -1.0dB). Distortion 0.5%. Noise & hum -44dBm. Output impedance 1, 4,
8, 16, 150, 200 and
600 ohms. 70.7V may be obtained from the 200 ohm output. Damping factor
10. Input impedance:
150 or 600 ohms balanced or unbalanced. 10k ohms bridging. Gain 66dB for
150 0r 600 ohm
inputs. MECHANICAL: Octal output socket for all output impedances. Input
attenuators: 10 steps
in 5dB/step and 0.5dB/step. Light gray. Output tubes 7591. Size 19" rack
mounting. 5-1/4"H, and
10"D. Weight 33 lb. Sold about 1963-1967.

Thanks,

Neil

: Ed N4ZUM

A fine unit. The Drake ML-2 (Marker Luxury) was a hybrid radio that had a tube final and an internal vibrator supply. What was nice about the radio was it as an AC/DC unit so when you left the car you could carry it in an plug it in to 110 VAC and keep on working. I seem to remeber that they were not made by Drake but were marketed by them only.

I havn't had mine since sometime in the 1970's. Congratulations on the find.

Joe N9JR

I appreciate all the good positive postings regarding my buying and selling of ham gear. Its just in my blood, most of you know theres no way you are going to make any real money at this. But its fun (mostly) and I enjoy cleaning up, restoring, repairing (what I can) and selling the rigs. It gives me a chance to see and hear them all. As a late starter (54 yrs old, ham 3 yrs) I have to catch up on the rigs. Anyway, thanks to all you positive persons!! It has been a little expensive to keep my reputation clean (Ive paid for several hams mistakes and several of UPS's mistakes.), but I will continue to try!! IF YOU NEED A GOOD USED AMP, HF RIG, OR ACCESSORY, give me a try. Thanks Murray Neece Odessa, Texas KC5MDM 7.245 most afternoons after 2pm central.

Somewhere back in the late 70s, I saw a QST or 73 article that described how to fix this (I had one back then). Sorry I can't nail it down any closer than that but...

The idea was that the HW-101 used the same circuit board as the SB-101. The SB-101 had a sidetone volume pot mounted on the board. If you look at the top of the board, sure enough there is a silkscreen of a miniature pot with holes drilled and everything. I believe a fixed resistor is also required, but that's it. Find somebody with an SB-101 manual to copy the circuit diagram for you and you'll have the componant values you need.

Source record: 116019

Hi,

I want to build a boatanchor CW transmitter. Medium power (25 - 150 watts) maybe an oscillator and a 6DQ6 or a 6146 or a pair of 6L6s or 807s, crystal control, pi-network output, and doesn't need coil forms that I can't get. Nothing too fancy. I've got the power supply iron.

I'm sure there have been plans for many such transmitters but can someone point me to a URL for a good one? Or point me to a book that is still available or to an old QST/73/CQ article?

Thanks in advance!!

No, they are NOW charging $20.00 a year.
It was $12 about 2 years ago, then he went up to $15 and now $20 with
talk of going to $25 according to one person who wrote to me.

NOW, with 600+ people sending him $20 each he is not doing too badly
at all!

Every other LIST is FREE!

To subscribe to the FREE BOATANCHORS list at TEMPE, send a message to:

Hello group, I am looking for a wire-wound resistor.

Information follows:

Clarostat
RW21G351
RFS 350 22w
NOM
140....(not readable)

This is a 3" wire wound with a metal bracket and two standoffs on either
side.
Looks like this:

o=[||||||||||]=o

Used in the T-368 Transmitter.

Would like to try to obtain the original type rather than sub if
possible.
Thank you!

Take a look at the BONEYARD BLUE BOOK prices list on my web page at:

http://www.mnsinc.com/bry/hamlynx/hamboata.htm

Do you think they have gone up much since JAN 1995?

Post replies to this newsgroup please!

Bry, AF4K / G3XLQ

From: K0PYB
1. My father W0QXT recently became a "Silent Key".
2. I have the following equipment that I must sacrifice:

R-390A+field maintenance manual (excellent condition)
Viking Ranger I (good condition)
Kenwood TS530+Manual (one owner)
Tektronix 531 O'scope, one extra module (fair - good)
National NCX-3 w/pwr sup/spkr (good)
National NCX-3 (fair)
Military RF Wattmeter (good)
BC-348, internal ac pwr sup (so so)
BC-221 freq meter, homebrew pwr sup (good)
Homebrew linear (pair 811s/572bs)
Homebrew linear (designed to use 8877)
Millen 90807 RF deck (nearly cherry)
Vibroplex, chrome base (excellent condition)
Odds and ends of a Basement Junk box
Hy-Gain, Tribander..... TH4 (possibly one dead trap, you
must take down.... otherwise it is free)

3. I am not looking to make a killing. I am trying to help my Mom
out.
Please contact me if interested.

The list is nearly three years old. A bit stale. Like suggesting a computer price list from July 1995 would still be a valid representation of value.

I agree with the earlier post, suggesting that what one sees in the "really cheap price range" is the junk that's left over. I don't think an expectation of a 30% drop in the price of a mint Globe King, KWS-1, etc. is on the right side of zero, frankly.

Disappointment is only an offer away .... :-)

>Thank you-
>KQ6JG

Hi Michael,

The subscription price has gone up a little. Please send me $150 for a six month subscription to each group, and get all your friends to do the same. I see you are interested in four groups, so that's $600. I know it seems like a lot of money, but look at all the great posts your current trial membership is bringing you. You wouldn't want to get cut off and lose all that, would you? So send the $600 today, in $10 and $20 bills. I'll credit your next six month subscription $5 for every friend you get to sign up!

Thanks,

Elmer

2486. FS: SX115/HT32B Station

Needs the I.F. coils replaced and or repaired. Front panel is collector quality. Over all condx is a 9.5. A worthwhile investment if you have the time to fix. I have the W7FG manual (very thick, high quality), and a large roll out master scat. I picked this up because it looks extremely nice but i have too many other projects.

$125.00. You pay shipping from san diego zip 92139. Weighs ~ 105 pounds boxed up.

Despite what anyone says about the technology, these old rigs represent the utimate in quality. Back in the days when you could call up the manufacturer and actually talk to the engineer- in contrast to today then you get some marketing guy who has to be threatened before he will even send a schematic. And passes the buck to some guy in Japan at the slightest hint of criticism.

Rob.

Hello everyone:

Well after much very profound thought, I have decided to go back to my roots and go AM exclusivey. I would like to purchase a Johnson Valiant AND Ranger in MINT or VERY NEAR MINT condition. Radios should be completely operational, fully tested, all original (except for minor documented mod enhancements) and have original manuals. I would also like to find a MINT Johnson SSB adaptor that matches the Valiant (OK..OK..for rare occasions) as well as a MINT Hammarlund HQ-170AC or HQ-180AC with matching S-200 speaker also in MINT condition.

What I have to trade: I have a NEAR MINT Hammarlund HQ-110C with matching S-100 speaker (speaker is a 7.5...radio and speaker work great!) Also, I have a MINT ICOM 738 with matching SP-21 speaker and ICOM SM-8 mic; a Yaesu FT-2500M in excellent condition with mounting bracket complete with matching outboard SP-7 speaker in like new condition. Finially, I have a Heathkit HM-2102 Power and SWR meter in excellent condition. All have manuals.

If you have any of this equipment and are willing to SELL it to me or TRADE for something I have, please call me at 207-767-5143. Thanks for the bandwidth.

I don't think the prices of the really desirable items are going to drop.
Larry's "Boneyard Bluebook" is still only an indication of asking prices
from over two years ago. Certain items will always command top dollar
especially if they are in immaculate condition. There simply are not
enough KWM-1s and SX-88s to go around.

Message-ID: <MPG.e9426e775ec9969989682@news.detroit.mi.ameritech.net>
Source record: 115924

Hi!
I wonder if any of you folks would have any info/pointers on a cool BA
that I recently acquired. The front plate says:
US Army Signal Corps
RT-260 / GLQ-2
Barker and Williamson

The unit is in pretty fair shape and I would like to repair it if
possible. In fact I'm not even sure if it needs to be repaired. I am
not going to power it up until I acquire a Variac and can do it right.
The previous owner says that it was part of a US army set up called
"Angry 46". I have already looked at several Web lists of old US army
equip and find no mention of this unit.

Any help at all appreciated. I can be reached via email at:
rajs@pureatria.com.

Thanks,
-raj

I wouldn't exactly call the old rigs the ultimate in quality, though some of the gear intended for the military did use top quality parts. Most of the stuff intended for the amateur market, however, suffered from serious corner cutting. And the circuit designs, sigh, they were so limited by the number of active devices they could include that the designs were always seriously compromised (and that includes prestige makes like Collins).

You can still call up the manufacturer and talk to the designer(s). But it may be an international call, and it helps if you speak Japanese. (Don't bother calling the US reps with technical questions, they're just sales droids.). I've had occasion to consult the Japanese manufacturers about various equipments, both professional and amateur equipment. I've found them to be uniformly friendly and helpful if you can overcome the language barrier. I have an in there. One of our staff speaks fluent Japanese, and can act as translator. I've even had them return my calls, on their nickel. Like design engineers anywhere, they just love to talk shop.

>4. Using the above unsoldered wire, identified in step 2, re-route it
>to the NEG - side of the diode string.
... ^^^^^^

>5. Run a new wire from the POS + side of the diode string to the relay
>contact previously vacated.
^^^^^^

"NEG" and "POS" are often misleading ways to describe diode
ends. The "more positive" end during conduction
is the anode, but the "positive output" end
is the cathode. So which end has the better claim to be called "positive"?
This issue hasnt ever been resolved to anybody's satisfaction.

If these diodes are going to the cathode or filament of the tube, then you
want the diode's anode end to go to the tube cathode or filament.
it might also be a very good idea to put a 0.01uf capacitor across the diode
string to kill any RF rectification that might tend to occur.

One problem with vacuum tube HF ham receivers was the noise figure mania. Hams thought that if an HF receiver didn't have a 5 dB noise figure it was not very good and would not buy it. As a result, strong signal performance suffered because of vac tube limitations. Special tubes like the 7360 beam deflection tube (Squires-Sanders SS-1) showed up just as the transistor age began to take over, but by then it was too late.

Hello,

If anyone is interested, I have some very old tube radios. They are my father's! He just turned 81 yesterday and it is time to unload some of the various radios he has aquired.

If Atwater-Kents and Crosby radios interest you, then please email me. If you are looking for something in particular like variable capicitance tubes, (I believe these are circa 1930) let me know. He has quite a bit of old stuff. I would have to say they range from the 20's to the 50's. If you are interested in WWII radio's, he has those as well. Also have a Halicrafters SX-28 with the big wooden speaker with the cutout "h" in the center. Just ask and I will see if he has one, or two or...
Thanx,
Louie

Source record: 115937
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I was recently presented with an opportunity to purchase the above named piece of equipment with a speaker/phone patch unit.

The addition of 160 and WARC bands to my station is very attractive; my Tempo 1 is only 80-10, no WARC.

My questions for you are as follows:

1. Does this qualify as a Vintage Solid State (VSS) piece (I understand it uses 6146's in the final)? In other words, can I troubleshoot and repair it in my home
shop, no weird chips/other parts that I can't replace, other elements of a
VSS piece?.I have to be able to fix the thing when/if it dies.

2. General reliability of the unit. Does it die easily? Common failure modes?

3. Quality of the receiver. How does it perform on CW (my primary mode)? I understand Fox-Tango offered upgrade filters for the unit, are these necessary for a decent CW receiver?

4. And finally, range of values for units in good to excellent condition?

Thanks for your input!

73, Dennis

Predatory? Don't want it, don't buy it, you won't be prey.

The nice thing about capitalism is someone else is still free
to sell you theirs for $100.

Sellers motives/morals? Why assume the negative? Perhaps he's just
'swap-savvy challanged' and we'll see it for $100 next week :-)

Yaesu FT 101 EX 10-160 meter transceiver for sale. Mint condition, still has plastic wrap on face. Recently tuned and aligned by Yaesu factory. Tech commented on it's great performance and cosmetic condition. Comes with matching YC-601 digital display, still has "inspected by" tag on it. Also cooling fan, all crystals (most were optional) including 11 meters in the Aux position, manual all papers and Astatic D 104 desk mic. $500 plus shipping from Los Angeles area.
Also have MFJ 949E combination tuner/watt/dummy load/swr meter. I month old, in box with manual and warranty. $100 plus shipping.

Hewlett-Packard 122AR rackmount all vacuum tube oscilliscope,
with operating and service manual. 0-200kc bandwidth (yes,
you read that correctly). Was operational at some point in the
past, but didn't work the last time I plugged it in. The manual
is dated 1959. $10.

Will make a nice companion to all that other tube gear.

I'm in Mountain View, CA (near Palo Alto) and no, I'm
not going to ship this baby.

650-943-1852 (work, calls OK)
650-967-1530 (home)

Thanks,

Walter Underwood

:You can still call up the manufacturer and talk to the designer(s). But
:it may be an international call, and it helps if you speak Japanese.
:(Don't bother calling the US reps with technical questions, they're just
:sales droids.). I've had occasion to consult the Japanese manufacturers
:about various equipments, both professional and amateur equipment.
:I've found them to be uniformly friendly and helpful if you can overcome
:the language barrier. I have an in there. One of our staff speaks fluent
:Japanese, and can act as translator. I've even had them return my
:calls, on their nickel. Like design engineers anywhere, they just love
:to talk shop.
:
:Gary

Gary, your experience has been much different than mine.

(repeated from another NG)

I was seriously thinking of buying an ICOM 775. I asked the sales person if I could look at the schematic. I've never seen a schematic that looked like that. It was obvious that they were trying to keep the consumer from figuring out how the rig worked. Obviously, the designers were embarrassed with the design. Any designer worth his salt will go to great lengths to make it readable, so that the design inovations were more apparent. Not in this rig. Garbage, pure and simple.

Now, even though the US manufacturers cut corners, etc in those old rigs, the new Japanese rigs still pale in comparison. After all, there is no rec.radio.amateur.japanese newsgroup, now is there??

Hi All,

I am thinking of acquiring my first "boatanchor", a Navy RBL-4 Receiver,
and I would like to find out something about this potential accusation.
My questions are as follows.

1. Does the RBL-4 Receiver use a TRF or superhetrodyne circuit?

2. What types of modulation, and bandwidths, is it designed for?

3. Is a schematic and/or service information available for this receiver?

4. What is a Navy RBL-4 Receiver worth?

5. Any other comments on the RBL-4, Pro or Con?

Regards,

John Byrns

Hello everyone,

I will be calling CQ on 50.400 AM all this weekend.

Fri 9/26/97 16:00-22:00(PDT 23:00Z-05:00Z
Sat 9/27/97 07:00-22:00(PDT) 14:00Z-05:00Z
Sun 9/28/97 07:00-20:00(PDT) 14:00Z-03:00Z

I'll be calling CQ on the top and bottom of the hour.

Lets all get out on 50.400 AM and have some fun.
Solar conditions are favorable!

Equipment being used will be:

Gonset G-50 25w into ARX-6
Swan 250 40w into G5rv
Icom IC-726 into Marage A1015 150W into ARX6

If you have not seen my 50.400 AM page please check it out and let me
know what you think.

http://www.geocities.com/Hollywood/5860/50am.html

I think this will be a FUN weekend!!!!!
Everyone let me know how you all did and what equipment you used.

Thanks for your participation!

2541. National NC-100 series research project...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-26 00:00:00 UTC
From: lrware@no.spam
Message-ID: <60gr3l$lcj@camel15.mindspring.com>
Source record: 115865

Hello folks, in a private e-mail recently I was asked about the
Navy contract numbers on old National RAO type radios.
Readers of "boatanchors@theporch.com" already know I'm writing an
article on the history and the many variations of the National NC-100
line. For rec.radio.amatuer.boatachors a little explaination is in
order...

Unlike the National HRO line, it seems no one has ever properly
documented the NC-100 and all its many flavors... :-)
These range from the "entry level" NC-80, to over 14 mil. versions,
to at least 7 C.A.A. specials made as "Airways Ground Receivers."

The gentleman raised a great point: What were the contract numbers?

Since the data will be handy for my research anyway, I have a request
for everyone with a mil or CAA variant National catacomb radio:

Which one do you have?
And what contract codes are on it?

If you would be kind enough to drop me a line with the following
in it. you would be helping my research enormously.

Model number: ie. NC-100, RAO-X, RCP, RCL, etc.
Built and/or modified by:
Contract code numbers:
Contract date:
S/N

Anything else you would like to tell me about it.....

The owners name and e-mail address will be removed from the summary
data before it is sent anywhere, so no one will bother
you with requests to sell it. (Except perhaps me... :-)

Models of interest would include: (manual wanted)
AN/GRR-3 X
BC-903-A X
NC-100
NC-100A
NC-100ASC, ASD, etc. X (ASC version only)
NC-100LF X
NC-120 X
NC-127, 127D X
NC-156 X
NC-200 X
NC-2-40,B,C,D X

R-115 X
RAO-1 to -9 X (1-6,8,9) I have 7
RBH X
RCE X
RCF X
RCK X
RCL X
RCP
RCQ X
RZH X

The second column refers to radios I would like to purchase
manuals for still. (photocopies are fine!)
(This is of course a blatant pitch for help with my National
research project!)
And If you have a National catacomb type radio not in the above list
which is clearly a mil variation, ie. Navy contract data plate, or
CAA data plate, etc. I would *REALLY* like to hear all about it!

Thanks folks,

Hi Win,

I used to have a Globe King 500c in the sixties. It was of marginal quality at best. I don't believe the manufacturer (World Radio Labs) had a very good reputation for quality. The laminations in the modulation transformer were so loose, I could hear my voice inside the cabinet. It also liked to arc and smoke once in a while. I can't remember what it had for a final or finals. It was about 3.5 ft high and was fairly heavy. I think there were 3 separate units mounted in a "Bud" type cabinet, so it could be dismantled to move. This baby is a boatanchor in the truest sense of the word. Oh, and as an extra added feature, it generated some of the damndest rfi/tvi I've ever seen.

Caveat emptor and 73,

Paul K0PW

2550. Finding gassy tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-26 00:00:00 UTC
From: XmooX@XmidtownX.XnetX
Message-ID: <XmooX-2609971753190001@sl2.midtown.net>
Source record: 115874

I've been told that the problems I'm having with my Hallicrafters S40 (stations fade out after about 10 min) is due to a gassy tube. Since the only tube tester I know of (at Marvacs) tests only good or bad, I'd like to know if there is a way to test for gassy tubes. If anybody in the Sacramento, CA area has a tester and can help me with this it would be greatly appreciated. I don't have the money to replace all the tubes, and would like to find the bad tube and just replace it. Thanks.

If you look at price for Hammarlund 180s they have remained around the
$350-400 mark for mintcondition, in the $250-300 range for one grade
below. Certain receivers, like this one, have retained their value.

Heathkit ⊠Mohawk⊠ Model RX-1 Amateur Communications Receiver, double conversion superhetrodyne, 15 tubes, 160 - 10 meters, original manual, still a great receiver!
AND
Heathkit ⊠Apache⊠ Model TX-1 Transmitter, 180 watts AM/CW
AND Model SB-10 SSB Adapter, original manual, connecting cables, works.
AND
Heathkit ⊠Marauder⊠ Model HX-10 Transmitter, 175 wattts SSB/CW/AM, 10⊠ slide-rule dial, c. 1963, original manual, good front panel - looks good!, h.b. outboard pwr. supply, needs work. Matches Mohawk and Apache. $350 for all. No shipping, pick up in Seattle - Vancouver (BC) area (meet half way?)

Knight T-150 Transmitter, 150 watts, AM/CW, 80-6 meters, c. 1963, good physical shape; parallel 6146⊠s in output stage. $90.

National NC 109 Communications Receiver, single conversion superhetrodyne, 11 tubes, .54 mHz - 40 mHz, AM/CW/SSB, original manual, c. 1957-1960, rack mounted (no cabinet) $95.

Zenith Trans-Oceanic Royal 1000-D transistor short wave radio (c. 1958-1962); -chassis 9CT40Z2 (9CT41Z2); -9 bands includes long wave band; very good condition, works great. Selling because I have another Trans-Oceanic. $150.
Brian, VE7BCU, sells@planeteer.com, phone 604-240-6513.

From: Chuck_Rippel@nospams.com
Message-ID: <342b381b.882040@news-3.exis.net>
Source record: 115951

I have a spare 1967 Contract EAC R390A which have restored. It makes supurb specs at .15uv for 10db S/N + N and has been restored by me including a re-done front panel.

I would entertain trading it for an equally pristine 51J4 with all filters.

Drop me an E-Mail, please.

>late.

I've seen the 7360 used in SSB balanced modulators, but hadn't considered
the possibility of using it in a receiver front end. I can see how it would be
a good first mixer.

But the real problem with the old designs is the limited number of active
devices which could practically be used. Because of the bulk and filament
power consumption, the number of vacuum tubes you could practically
squeeze into a radio was sharply limited. That meant that every circuit
was severely compromised because it had to met many, often conflicting,
criteria. With the ability to throw many more devices at the problem, each
can serve an optimized purpose. The total system is still a compromise,
but you can make better tradeoffs for the total system because you aren't
as sharply constrained by the characteristics of any individual device.

A modern radio often has millions of active devices in it. That allows you
to produce functions which were simply impractical in the tube days. Yet
the radio can be much smaller, and consume much less power. If we tried
to do that with tubes, the reliability would be so poor that it would never
work, and it would take a dedicated generating station to power it.

I don't agree with that at all. Some excellent receivers were designed using a limited number of tubes. You don't make a receiver better by throwing more tubes into it. You make a better receiver by choosing the tube types carefully and then using them in an optimal manner in a carefully designed block diagram. This was a highly developed technology.

With vacuum tubes, more is not better. With RF integrated circuits the exact same thing is true.

Message-ID: <N.092697.095338.13@wan72.fs.cei.net>
Source record: 115961

One of my clients who knows I am a radio buff has suggested that I look at a Globe King 500 at a garage sale tomorrow morning. It's said to be "clean" (whatever that means). As far as big AM iron goes, are these things any good? I have a 75A-4 I could match it with, or is that sacrilege? Anyone have any comments with regard to same? Would it bust the axle in my Explorer if I decide to get it?

I'm probably not going to be particularly interested, but, if I am, what's a fair price for same? It's from the estate of a silent key and I'm not interested in taking advantage of his widow. Thought someone here might have some knowledge of these rigs.

Other comments to the contrary, a Globe King in really nice shape is a fine almost-legal-limit AM rig, and generally highly prized by AM operators. Prices are all over the map, depending on condition. You could expect to pay upwards of $800-1000 or more for one that has been fully restored and well cared for. Less, obviously, if you can -- especially if the rig needs work.

The Globe King 500B/C is a 4-400A modulated by a pair of 811A's. I own and use one. No trouble with any form of unwanted RFI/TVI, no significant "talk back" from the modulation transformer, no smoke. Just 300 watts or so of good sounding AM out the antenna end -- with a few simple mods in the audio chain to open up the frequency response a little bit.

Its a nice match for a 75A4 (although there ARE better AM receivers around from the same era).

2574. FS: SP-600JX Dial Overlays

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-27 00:00:00 UTC
From: Chuck_Rippel@nospams.com
Message-ID: <342cf2d3.1746450@news-3.exis.net>
Source record: 115882

Your SP-600JX dials yellowed and/or chipped?

Restore you SP-600JX xx and replace the yellow or chipped dials. I have had some SP-600JX dial overlays made. These were made by a photographic process complete with the raised lettering on glossy, white stock and are absolutely top quality.

Best of all, your dials can be re-done with out defacing the original dial face. Simply turn the dials around and install the new overlays. Nothing can be easier.

There are two styles:

One is a very fine lettering font which is found on the JX-1 etc.

The second is a more bold font which I have seen on the JX-17, 21 and 26.

Cost is approximately $50 for both the dial and logging scale.

2579. R390A Parts FS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-27 00:00:00 UTC
From: Chuck_Rippel@nospams.com
Message-ID: <342cf55b.2394455@news-3.exis.net>
Source record: 115887

FS: Rebuilds on R390A filter Caps and R390A new stainless steel front panel hardware kits.

The single biggest failure in the R390A is becoming the 2 electrolytic capacitors on the power supply. The 2 section 45mfd and 3 section 30mfd units fail and cause low voltage, power supply strain and static/noise in the radio.

I can rebuild yours with quality US made, new (not New Old Stock) Mallory components for $70/pr. Remember, electrolytic caps fail from age, not use. NOS caps are usually bad caps.

As most R390A filter caps are now leaking, I have found the results to be immediate with cleaner audio and a reduction of noise.

The technique is somewhat difficult and is one I was compelled to develop after Frontier Capacitor found they were difficult and declined to do mine. Your caps are returned looking original and plug right back in the radio. An individualized specification sheet for your capacitors is included.

Stainless Steel R390A front panel hardware kits

With the treatment given R390A's by the military, most of the front panel hardware on the radios can stand replacement. Front panel screws have oxidized and their slots rounded from use.

I have complete kits of all R390A front panel hardware available with a keyed placement pictorial. These parts are all brand new stainless steel and are as original. The kit even even includes the special meter screws and 5 conical lock washers for the center front panel screws.

$25 each set

2580. WTB: Junker DX-40

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-27 00:00:00 UTC
From: Karl Heimbach <heimbach@concentric.net>
Message-ID: <342D164B.2DB1@concentric.net>
Source record: 115888

In need of an "Operations" switch to complete restoration of a DX-40.
Would like to buy a junker with this switch intact or alternately, just
the switch.

Thanks,

Karl - W5QJ

2585. FTdx-560 Hum Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-27 00:00:00 UTC
From: Bob from SC <bobbach@cetlink.net>
Message-ID: <01bccb6a$ba6b5720$7a3836d1@CetLink.net.cetlink.net>
Source record: 115893
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Yaesu experts....

I have recently acquired FTdx-560 in very good condition.

The only problem is LOUD hum on speaker or headphones. Signal overrides hum when antenna is connected but hum is loud and occurs even when af gain is nearly at minimum.

Suspect electrolytics C268 or C270 in cathodes of audio amp (6BM8). Haven't replaced the tube yet, but anyone have any experience with this problem?

Thanks for the help. Bob Bacharach, WA2EMF, bobbach@cetlink.net

2589. Seeking hams in Minneapolis, MN area

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-27 00:00:00 UTC
From: kr4wm!@sccoast!.net!
Message-ID: <MPG.e96e6dee1d141cb989685@news.infoave.net>
Source record: 115897

Looking for information about a W9ZKJ (could be W9ZKT or W9ZKF). There's a sign in the photo I have with his callsign, but it's in Olde English font, and not easy to read. This fellow became silent key in early 1980's. I recently purchased his complete home brew station, and am seeking information as to it's history. I can send you a .JPG of the station as it was situated before being dismantled. Any operating information, hints, etc. appreciated. History of the builder would be appreciated as well (name?). Sure would be nice to find someone who actually operated this equipment with him!

I enjoy putting "silent key" radios back on the air, and knowing the history behind these fascinating radios adds tremendously to the enjoyment of operating them.

If you know of a silent key radio that needs to be put back on the air, please let me know- I always honor the original owner by letting others know who it belonged to.

Thanks to all who e-mailed me with information concerning the Globe King 500. It was very informative and helpful to me in evaluating this rig.

It turned out to be a Globe King 500-B and presently I am negotiating with the estate for it. At present, we are pretty far apart in terms of our estimation of the rig's value, so to those who expressed an interest in purchasing the rig, if I do not purchase it, I will certainly post the information here so that other potential purchasers can get in touch with the people handling the estate.

Hum can be introduced via a filament-cathode short on any tube in the
signal chain. This introduces 60 hz ac onto the signal.

Hi gang,

This is a long shot, but here goes: am looking for a mint or near mint
Hallicrafters sx-140 receiver and ht-40 transmitter combo.

Best regards,
Jack W7QQQ (ole coot)

Interesting logic. But I doubt that the schematic has been drawn to
intentionally obfuscate.

If you were to obtain the service manual for this rig, and if is done as
well as the IC-781 manual is for instance, you would find a clear
exposition which covers many "sectionalized" schematics which may take
some time to understand, but not because somebody is trying to pull the
wool over your eyes. Its quite too complicated for one small schematic
to give you a clear picture.

No "ideal" ??

Well could you give us at least a FEW examples? Are they TV tubes?
Radio tubes? Transmitting? or only receiving tubes?

Give us some "ideal" of what you have there! :-)

And, geez, where do we find 7360's nowadays?
Those were tough enough 10 years ago!!!

"William E. Sabin" <sabinw@crpl.cedar-rapids.lib.ia.us> wrote:

> You don't make a receiver better by
>throwing more tubes into it.

Bingo. The more tubes, the more noise,the tougher
it is to align. The idea is to get the max gain
and lowest noise out of the fewest stages.
One of the nicest things about tubes is that they
tend to force people to choose the simplest designs.

>With vacuum tubes, more is not better. With RF integrated circuits the
>exact same thing is true.

I am a tube salesperson, so I cannot comment knowledgebly
re RF IC's.
I will say that the *good* ham & SW gear that was made
back in the old days involved a considerable handwiring
(uggh, check out some Hallicrafters' bandswitches, yikes!),
and could not be duplicated these days for less than
6X to 10X the price. Them ol' National HRO's sold
for $359 new in 1951!

BTW, we have a good deal on Russian 807's
if anyone's interested. Check out:

I have a Kenwood TS-530, which includes WARC bands, for sale. It comes with the original box and operating manual. The radio is excellent physically. It does have an intermittent electrical problem as it occasionally jumps .1 or so Mhz either up or down. Not sure what it will take to debug this, so I'd like to sell the radio as is. I'd like $310 plus shipping. This rig looks really nice and once the minor electrical problem is fixed would be a very nice rig.

2658. Hammerlund Roberts HiQ receiver questions?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-29 00:00:00 UTC
From: Jim McKinnon <radiola@ihatespam.com>
Message-ID: <60oatf$sv8@winter.news.erols.com>
Source record: 115730
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

I just picked up a Hammerland Roberts receiver. It uses 5 - 01a's. It looks like a kit but has a nice engraved panel. It is also in a cabinet with a gold decal that reads that the cabinet was built to Hammerland Roberts specs. I have an AC Super wasp in the same cabinet. Does this set use plug in coils? The only coils in it are the ones on the tuning caps. Is the set a boat anchor or does it have a little value as the Superwasps and SW3's do? Sorry about my questions, but I collect mostly early 20's broadcast receivers.

Thanks,

Unfortunately, there was an unplanned change of
IP numbers for the systems and the DNS entries
take time to propagate. You can get in to some
degree using the IP number as shown below.

Everything will be back to normal (except new IP
address) as soon as things get updated around the
world...

QSL/QTH.Net are up and healthy, just not as easy
to access as desired.

MAGNETIC SURVEY INSTRUMENTATION

Prices include shipping in Lower 48.

MEDA uMAG-02WB Handheld, battery-operated digital
fluxgate magnetometer. Sensitivity: +/- 0 - 20.00 - 200.0 -
2000 milliGauss F/S, DC-400 Hz (-3dB @ 400 Hz ref to DC).
Analog output +/- 2.000 V F/S. Linearity .02% or better.
Absolute accuracy +/- 0.5% or better, traceable to NIST.
With 10 meter cable and transverse probe, 6 spare batteries
in storage case, multiple-battery harness for up to 8
batteries (approximately 12 days continuous operation),
analog output cable w/BNC (to oscilloscope input), manual,
calibration certificate, transit case. In new condition.
Current price from manufacturer is $900. Sell at $450.
Three available: all three, $1300 including 3-channel
chart recorder (see below).

LEEDS & NORTHRUP SERVO RECORDER 136-304-304-304-00-00-00-
L0088-L0088-L0088-6-BV-000. Three-channel servo recorder,
modified for potential inputs. Can be internally adjusted
from +/- 1 millivolt F/S to +/- 2V F/S. Set at +/- 1V F/S.
Chart speed @ 60 Hz 2cm/hr or 2 cm/minute (at 50 Hz = 1.67
cm/min or 1.67 cm/hr). Internal line voltage selection for
100/120 V, 220 V or 240 V. Power burden: 27 VA. Power input;
3-wire IEC connector. (Uses standard IEC cords). With 2 sets
spare pens, 2 boxes charts, NEMA line cord, a few spare parts,
carrying case; Used, good condition; $100.

Clean Atwater Kent model 35 (circa 1924) project for sale.
This is a very restorable project for someone.
Partially disassembled but not hacked-on.
Nomenclature plates clean and original color.
Mayflower plate on top in good shape.
Transformers not rusty and still have good crinkle paint,
though not checked. No tubes. Nichrome resistors
present, though a couple seem to have been repaired.
Grid leak and grid cap present. Tuning knob and Vol.
knob present and in good shape. Needs new pullys.
Replacement phospher-bronze strap from AES included.
Battery cable present and long with good cotton cover,
although someone has used shrink-tubing on the
lead ends (2 inches or so).
..jpg photographs emailed on request.

I'm never going to get the time for this and
someone else should have a shot at it.

$30 plus 16 lbs shipping from 78728.
If multiple replies, my daughter will draw a name
as always.

IMHO, your problem is much more likely to be a paper/wax capacitor that
gets electrically leakey after warm-up or an internal short in a tube
that only appears after warm-up. If a tube is gassy, its gassy hot or
cold.

Good luck,
Steve Robertson

>The ultimate boatanchor receiver...

I believe I may have *seen* one, but I've never attempted
to *lift* one. The only National I've owned was the NC-190
drift-O-matic. That thing was a horror. I replaced it with a
Drake 1A, and later with a Drake 2B. Now that was a neat
little receiver (though Drake wouldn't have recognized it
after I got done modifying it).

I heard that MTBF was very poor on the monster you're
talking about, something on the order of 150 hours as I recall.
I think it drew nearly half a kW too, maybe more, that was a
long time ago. That's quite a contrast to a modern HF receiver
(or even transceiver). Receive draw is on the order of 12 to 25
watts, and MTBF is on the order of 20,000 hours (after infant
mortality). Some are even more thrifty.

I suppose those old monsters have a certain charm, like an
old steam locomotive, but I'm just as glad we have things
that work better now. I will admit to still owning a B&W 6100
though. That was the first amateur synthesized (crystalplexed)
SSB transmitter, and the first store-bought radio I ever had..

I used it on RTTY up until about 15 years ago when I got talked
out of the 2B by a neophyte wanting a receiver for code practice
and broke up the station. (I had upgraded to a used pair of Drake
Twins for my voice rig, but they couldn't handle the guff of the long
keydown times of RTTY, sissy sweep tube finals.) I tried to give away

the Mod 15, but no one would take it, so it wound up as landfill.

The B&W needs new filter capacitors now, and I might get around
to putting some in someday. It is rather impressive, in an early 60s sort
of way, but I doubt I'll ever put it back on the air. My now almost ancient
IC-735 does yeoman duty for my HF digital operations today. That thing
is a rock, it just won't quit.

Terry:
I have had very good results using good ols WD-40. You need to soak the glue for several ours, if it's old and very hard. Prop the equipment to prevent runoff (or wicking into undesired areas). Cover the glue with a tissue or similar to keep the WD-40 on the glue. When the process is complete, the glue wipes off. Clean any WD-40 residue with isopropyl alcohol and a tissue. It's clean and harmless. Just use common sense when applied it. This isn;t a "fire hose" technique.

This is a sweet rig - made from say 1951-1955 - Ostermann's great book says it's worth around 70-140 bills and common.

There was a nice upgrade article in November 1954 QST on it - basically, but a larger bandspread knob on, put in an antenna trimming cap, and do a few audio changes.

The S-76 and its near-twin (S-76U AC/DC) can readily be run off batteries (of course, these are the old-fashioned "B" batteries wired externally)

The S-76 and U are noted for having seriously-calibrated LARGE (4" s meters)

One problem sometimes noted is that the dial-string breaks - it can be re-strung after some practice!

With its 50 khz and 1650 khz IFS, the S-76 is very much an anchor in the Hallicrafters low-priced general coverage line, which ran at least to the SX-122a in 1970.

Both Ostermann and Dachlis have terrific books on old receivers.

Audio is the S-76 is perhaps better than the transistorized rigs of more recent times - a five-position LC bandwidth network. Can also use it as a 4-watt PA or guitar amp!

The S-76 does not have a product detector - SSB reception is fine but one has to tune the BFO pitch knob CAREFULLY - also maybe reduce RF gain.

2676. Tube substitution in Swan finals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-29 00:00:00 UTC
From: kmccoy@stetson.edu
Message-ID: <60mur3$l68$1@beret.stetson.edu>
Source record: 115809
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Pardon the cross-posting. I am having some trouble while transmitting on my vintage Swan 400 (all tube). It seems to arc once the tubes in transmit circuit heat up; the lack of visual evidence around sockets and solid state components leads me to believe it is in a tube somewhere. I have tested and replaced all tubes except the finals, since the setting instructions are confusing to me, calling for an external ampmeter to further adjust the bias to 55 ma (even though the adjustment knob only goes to 50 ma)...

Anyway, the real reason for my post is that the tubes currently in the final amplifier stage are 6146. The schematics and manual call for 6HF5. The compatibility of these separate types is unknown to me; the settings on my Heathkit TT1 tube tester differ greatly.

Does anyone know whether these tube types are compatible, or should I consider trying to acquire the original tube type called for in the manual? I don't *think* there has been any modification to the circuitry.

Please reply here or email me directly at kmccoy@stetson.edu

Thanks much,

Ken KF4BQF

Source record: 115738

I have a Collins KWM-1. The knobs on the two roller inductors look like the muli-turn Oscilloscope knobs that Tek used, with a counter number in a little window and black numbers on a silver background. I have seen pictures of KWM-1's with a more military looking knob, that is black with white numbers.

Does anyone know if there is any significance to the different knobs? I have seen ads in old QST's with both styles.

Any information would be appreciated

Thanks,

Sparky KI5GY

After some head-scratching, and the revelation from a friend here on the list that the odd reverse-pitch-on-half roller coil I snagged this weekend is for the plate circuit of a phasing type SSB exciter, I've decided to go a different route to get on 160 and am therefore offering this coil for sale, best offer over $20. Total inductance supposedly 33 uH. It has two windings that meet in the middle, one LH thread, one RH thread, and separate roller contacts for each winding.

Source record: 115741

Hi all
Am in need of some parts to get some equipment going. First, I recently acquired a Hewlett Packard 5245L frequency counter without the power cord. If anyone out there has one, or the three prong connector or knows where I can get one, any information would be appreciated.

I also have a SWAN NB-500 noise blanker that is in mint condition, and a lot of folks have told me how well it works. Unfortunately, I need the small I.F. circuit board (5.5 Mhz) that fits into the SWAN500C to make it work. Anyone have one in their junk box (or in their 500C and who no longer uses the NB-500) they would be willing to sell me? Please email me. BTW...I have checked with John Bruchi and he doesn't have any of the I.F. cans. left.

Thanks for reading and responding.

Circuits Galore

Hi all, I'm back!!

Two weeks abstenance has meant little work on my homepages. I have replaced the counter to another that works. During the last two weeks the pages have had '0' visitors although 130 of those have sent me E-mail. Strange!!

PMS OTA
Just before the holiday, my old PC-jurassic blew itself to bits so my packet PMS, with all the radio, circuits is off the air but Ron, G0TLA, is still holding strong.

VALVE (tube) RX
The 'valve receiver' has seen a little more work done to it and the tracking across the lower MW band is much improved. With the new coil winding data the LO/RF tracking is almost perfect. Far better than expected.

OSCILLOSCOPE
Loads of comments about the basic oscilloscope information. The general opinion so-far is that it is not so basic, what do you think? Have I forgotten anything?

SYNTHESIZED RECEIVER
The ORIGINAL circuit diagram for the 'Synthesized Receiver' project was 100% accurate. The VCO and Phase Detector chips are NOT CMOS. Thanks to E-mail, I have now been spared the laborious task of taking my own synthesizer to bits to get the information for the homepage. I will now be updating the project hopefuly before Friday. Many thanks to the kind soul who took the 'time and trouble' to sort out my cryptic mess for me and provide the information.

REQUESTS
I have had requests for VHF and UHF RX preamps Not being so interested in VHF they will have to wait a couple of weeks, but it sounds like a good idea to me.

SOON
Coming soon is an AM TX for the MW band so that old vintage radios may again 'beat' to the rythm of Perry Como, or Dave Brubek.

DC RC HITS VLF
My Direct conversion RX was sucesfuly used on the VLF bands

from 15KHz upwards, I am awaiting a response from the gent concerned so that I may add the details to the homepage.

NOT AGAIN!!!
Finally if I get just one more request for circuit diagrams to locate lost model aircraft I will scream!!!! I the best method is to write your name, address, and telephone number on the wing. You could also offer an 'unspecified' reward for its return. Readers Digest are always giving away their 'valuable' pocket calendars, printed on genuine paper.

URLS
Ok then nothing else of interest to add so here is the URL, just in case you have not bookmarked the page. You will not be dissapointed.

http://user.tninet.se/~acz732k/ Main site
http://hem2.passagen.se/sm0vpo Mirror site

Have fun with radio Homebrew / QRP / Hamradio / Wireless.
Best regards from Harry, Upplands V�sby, Sweden.

PS Several E-mail massages have begun "I am not a licensed Radio Amateur, but ... ...". My page is not exclusively dedicated to HamRadio, QRP, but includes ALL aspects of homebrewing (including the booze - Hic!) and electronic construction.

YIKES!! No wonder you are having problems! The 6146 is a "real"
tranmitting tube, while the 6HF5 is a color television sweep tube. The
6146 was made to go all day and night without complaining at medium
power (about 180 watts CW input for a pair). Sweep tubes, however, are
great for *INTERMITTANT* service at high power. Doing a replacement
without circuit changes is really asking for trouble. The power supply
for the Swan probably delivers voltage too high for the 6146 and that is
causing the problem.

Get the tubes that are supposed to be in there. (I don't know offhand if
the tube pinouts are the same, so be real sure that no mods were made to
the set before replacing the tubes). BTW, they won't be cheap!

>Bill W0IYH

You don't need 5dB NF on HF, but somewhere in the region of 8-10dB on
10m, on the other bands it is less critical.
Drake 2-B works satisfactorily while not every R-4C are good. Some
have a noisy third mixer.....
3dB noise figure is possible on 2m with low cost valves like E88CC,
E189CC. We believed transistors were so good, but often they worked
not as good as they could have done in our 2m gear.

I would be interesting if somebody cared to note all particularities
in design of old radio sets, some engineers may still exist. Many
clubs seems to care for keeping old radio's but just too often they
are more interested in polishing wood boxes than trying to understand
the technique behind it.

We learned that a popular valve portable receiver had some positive
feedback in the IF, an IF xfmr had an extra winding for this, but this
could not be seen on the circuit diagram. (Radionette Kurer).
I am sure engineers will be glad to tell us some gimmicks they had to
use to make the sets ready for production. Racal RA17 is another
receiver which would never have reached the production line without
certain gimmicks made by a hacksaw on chassis!

And just four years later, in 1969, we at National were building the MD-777/FRT, 2-30 Mhz synthesized, fully solid-state, motorized final tuning, Ledex switches on the front panel to allow for remote control of frequency selection, designed to work with transmitters up to (I think) 200KW, maybe 12 inches of 19" rack, don't remember the weight.

Right - I was always amused with how the hams in Cuba and Russia (and
a few other countries) used to put on their QSL card:

Transmitter - 40 watts (or 200 watts)

Receiver - 19 tubes

Like.... the QUANTITY of tubes they used somehow made it better???

Message-ID: <19970930235700.TAA21831@ladder01.news.aol.com>
Source record: 115813

I have for sale the following Vintage VHF equipment. It is taking up too much room in my shack and I need to move it out.

Clegg Interceptor VHF Receiver 6 & 2 Meters
Clegg Interceptor All-Bander Convertor (3 to 31MHZ)
Both units are in excellent condition and will easily rate a 9
$250 plus shipping

Ameco TX 62 6 & 2 Meter Transmitter
Ameco VFO-621 VFO
These units are also in excellent condition and will also rate a 9
$95 plus shipping

I have manuals and/or documentation for the above.

Will consider a package offer on the whole set.

E mail to K4FB@aol.com

Thanks,

Terry, K4FB

2705. Re: Tube substitution in Swan finals

Newsgroup: rec.radio.amateur.boatanchors

6146 tubes require an entirely different socket than the 6HF5. If your
radio has 6146's, the sockets HAVE been changed and other changes would
have to have been made, possibly unsuccessfully since it is not working.
Sorry, this problem may be a tough one to solve.
Dick W0EX

Source record: 115815
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

National NC-200, completely degrunged, all orignal knobs are in nice condition, completely recapped with orange drops, exterior pain is original and not too many scratches. Some dings in the chrome strips, Dial in nice shape and meter ok, do not have external speaker, but do have th PP 6V6 to VC output transformer that can be mounted either in the receiver or in your favorite external speaker. unit is operational and nice looking, but it is old and will always require TLC to keep it happy. Front panel has no dings or extra holes, the rest seems stock other than the re-capping job which was nicely done.

$175 plus UPS on 50 lbs from Zip 95827 (I will pay for versapackin and will double box also.

Thanks for the read,

Bob, KE6F

From: 8TJM@CONCENTRIC.NET
Message-ID: <875672802.19468@dejanews.com>
Source record: 115817

THANKS FOR READING..
I have a Johnson valiant transmitter... it displays the
following problem.. the grid meter pins backwards against
the meter.. I cannot get any grid current indication and
as noted is pins backward.. The vfo is working as I can
hear it in a local receiver.. all other aspects of the
meter seem to be working..that is the buffer, occ. on no
other position does the meter pinn backwards..I took out
the 6146 tubes thinking one may be shorted and without the
finals in the meter still pinned backwards only in the
grid position..
any help or suggestions most apprecitated..
thanks tim

2710. unbuilt Heathkit available, prefer trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-09-30 00:00:00 UTC
From: lrware@no.spam
Message-ID: <60rm04$ofj@camel12.mindspring.com>
Source record: 115819
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Whilst wandering through a hamfest recently, this
unbuilt Heathkit started wispering to me...
Sitting, still in its factory shipping box, it pleaded:
Take me home, take me home, please.... I've been sitting for years,
no one has ever unpacked me, just looked at my manual...

This is a fine example of Heathkit firebottle technology,
Heathkit Laboratory Oscilloscope type IO-30,
5" CRT, 11 firebottles, etc. from around 1960-62?

I believe the poor thing had gotten quite lonely sitting for
years and years in someone's attic.
It pines for the company of its breathen, in someone's collection;
A place where it can spend its days surrounded by other Heathkits,
with old friends, remembering Benton Harbor with fondness.... :-)

Will happily consider trade for old National sliding coil radio,
will add Good HP 200D or HP 400D, or cash for one in good condition.
Would be happy to trade for a couple of National HRO-60 coil sets.
(any except B,C,D,AC.) Would consider throwing in a good HP 200D or
HP 400D for the right coil sets.

On second thought, will be happy to consider trade for most anything
National, or test equipment related... :-)
Failing the locating of a good home for this poor old Heath, I
may just build the poor old thing and play with it around here...

-Larry

Hi,

I need to get the pin out of the 8 pin connector on the
rear of a military BC-348 receiver (Belmont) From what
I can gather , pin 4 is + 28VDC and pin 8 is ground.

I would like to confirm this and get the pin designations
for all 8 pins.

Thanks,

2715. FS: Jones Wattmeter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-01 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <3432CD39.5F9A899F@sprynet.com>
Source record: 115663

The Micro Match is a wattmeter built by M.C. Jones

Electronics of Bristol, CT. It uses a remote coupling unit and a meter/control unit. This one is the model 263. It's a real wattmeter with adjustable calibration.

A rotary switch selects forward or reflected power

levels, full scales for each read 10, 100, or 1000 watts to separate scales on the meter. Impedance is 52 ohms. Frequency coverage is .5 to 225 mcs with adjustable frequency compensation.

A Collins afficionado of my acquaintance says this

was the same unit Collins used on its S-line consoles.

You can have either type "N" connectors or UHF connectors (your choice) on the coupling unit.

Looks good and the wattmeter seems to track the Bird and others I have here, although I can't vouch that it's accurate at all powers and frequencies.

For sale as described, no manual, at $75 plus shipping from Nashua NH 03060 (about five pounds) if required. Your choice of shipper.

tnx es 73

There is a site in Maryland that repairs Swans. They have government contracts that pay the bills and do the Swan stuff for giggles - really, I had them do some work and the prices were amazingly cheap!
There is a 40 Meter net at lunchtime weekdays where Swan affectionados gather to talk about such things and the guy who runs the Swan piece of that shop is often on. He's a real nice guy. Forget his call.
If you absolutely cannot find them let me know and I'll try to run the info down here somewhere.
Guaranteed they will restore it for real short money - and do a nice job of it. DavidC AA1FA

Find an RSGB handbook of late 1960s or 1970s vintage and look for
Peter Martin G3PDM's high performance receiver.

Single conversion, preselected, no RF amp, 7360 mixer, IF at 1.6 MHz(If
I remember rightly) with lattice crystal filters distributed down the IF
strip. Mixed thermionic and semiconductor design, and a phase-locked
summing loop for the local oscillator. I reprinted his very low drift
Vackar VFO in the ARRL handbook oscillators chapter, but the rest of
this receiver is well worth tracking down. Periodically, I wonder about
looking for a few 7360's and building one.

> A modern radio often has millions of active devices in it. That allows you

>

I understand your point, but I think that the logic works in both
directions.
Can it not also be argued that in some ancient thermionic radios, every
stage ran
quite high power, and so had a fairly high TOI simply because the only
available devices that worked at the necessary frequencies ran at those
power levels?

Simple receivers without frequency synthesisers or counters may
suffer in the frequency precision and stability stakes, but this can be
counterracted by the operator having to keep readjusting things. A weak
receiver that suffers overload effects cannot be similarly compensated
for its failings. Quantity of devices is not a complete substitute for
all performance parameters.

The classic structure with narrow, tracking RF selectivity, and
having the prime selectivity distributed down a multi-stage IF amplifier
is much closer to being optimised for dynamic range than the now more
usual block filter and block gain approach.

The designers of all the HF radios from the "Big 3" in Japan, have all assumed that distortion in the IF and AF stages after the main IF filter is unimportant, and so we have a few generations of radios which do not produce audio as clear as the HRO, AR88, and BRT400 of yesteryear. Conversely, there is the tendency of all of us to look back and remember things as being somewhat better than they really were, besides, things have also got a lot more congested than in the '60s.

Find the descriptions (by Pat Hawker, G3VA) of the work done by Colin Horrabin on high dynamic range receiver building blocks. With things like these SD5000 based mixers, the performance of the 7360 can be more than threatened. Medium power RF transistors in feedback configurations offer marvellously linear gain. The current limitation is the non-linearity of the actual quartz in crystal filters. None of these things are particularly recent. Rafuse's paper in the mid 1960s showed the use of DMOS devices in switching mixers, David Norton's patents on transformer feedback amplifiers have been around for some time. Peter Martin's receiver design was shockingly revolutionary at the time it appeared, but despite being overlooked by just about everyone (including me), it has sat there on many people's bookshelves, silently pointing the way to the architecture of very high performance receivers for the last 25+ years. I'm ashamed of how long it took me to realise what I'd overlooked.

Anyone with a kitchen table and a spirit of adventure can build a receiver that cannot be matched by anything they could buy, ancient or modern.

Cheers
David GM4ZNX

I'm selling an exceptional Drake TR3/RV3, serial numbers
12558 and 14808 respectively. AC3 (serial number 15031) is
included in RV3. Also including Shure 527A hand-held mic. Rigs
are in great shape and very clean. Fully operational with recent
check-up at R.L Drake. Price is $300.00 excluding shipping costs.
Phone Marty at 205-883-6074 or email at soprano@hiwaay.net
if interested. Thanks and 73.

I've just finished dusting off this beast --- definitely a boat anchor at 60 lbs --- and giving it a calibration and check out.

It's in mint condition, has original operator-maintenance manual with addenda and works like a top.

I have absolutely no use for it, but it would break my heart to take it apart for scrap/inventory. If anyone is interested in taking off my hands, please e-mail your offer.

Keep in mind thius monster is in eastern Canada, so getting to where you are might cost a buck or two. But if you're coming to Nova Scotia on a fall vacation/hunting trip, we can work something out.

I guess I'm disturbed the most by how people have grown so accustomed to mediocrity in everything they buy.

If you pay $3000 to $5000 for anything like a radio, you should expect to get a service manual. After all, we are hams. But then again, maybe the Japanese are making an accurate estimate of the technical abilities of the average modern ham.

For anyone who can help, I am looking for a schematic for the Rohde and Schwartz
EK07 tube receiver, which despite using all tubes, achieved a very high third order intercept.

I spent quite a bit of time with my R4-C, experimenting with tubes and various mixer and RF amp circuits, and have not been able to boost the IMD performance, with one exception- bypassing the RF amp. In that case you get 10db higher dynamic range, but inadequate sensitivity on 20M and up. So I'm interested in seeing what Rohde and Schwartz were doing to get such high performance.
(I tried the Rohde and Schwartz web site and their posted email addresses are not valid)

Lastly, on tube designs- the old color TV's from the late 60's and early 70's are still, I believe, some of the most elegant circuit designs ever made. With 10-20 tubes their picture is no worse than the modern set using millions of transistors.

Rob.

2749. Re: Magnetize Your Oil Filter!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-01 00:00:00 UTC
From: Jim <jstrohm@taxes.net>
Message-ID: <343231C6.6196@taxes.net>
Source record: 115851

Hogwash.

A magnetic oil pan drain plug works as well. There's a funny property of metallic particles in oil -- since they are heavier than the oil, they tend to sink. To the bottom. Where the drain plug is. Any metallic particle that is capable of being attracted by magnetism will be attracted by a magnetic drain plug.

You can buy these things all day long at your local auto parts store for about $3. each.

Your car probably already has one of these plugs installed.

Just wait until these "magnet-power" characters discover that there's magnetic power at work in your microwave oven. THEN we'll see "magnetic power boosters" that you stick on the outside of the microwave to make your food more nutritious and your microwave oven so much more powerful you can cook food for 25% less time.

Oh yeah, and they'll save you 25% on your electrical bill, too.

http://patent.womplex.ibm.com/cgi-bin/viewpat.cmd/5078871
and
http://patent.womplex.ibm.com/cgi-bin/viewpat.cmd/4450075
pretty much summarize the world of magnetic oil filters. It's interesting that the name "Stan Owen" appears on none of the four patents returned on a search for "magnetic oil filter".

I just acquired a MINT HQ-170AC-VHF so am selling my HQ-110AC This radio is NEAR MINT. PERFECT front panel. A few very small paint chips on case but very easily fixed. This radio was acquired from the former owner from the Colorado Radio Museum. Radio plays great..better sensitivity than my ICOM. Could use "minor" freq. allignment. Reads about 20 kc low on all bands. Also, clock works perfectly but auto timer not hooked up. Finially the Cal Set knob moves the dial indicator slightly but not the way it should. Other than that, the radio is PERFECT. $150 plus shipping. I have matching S-100 speaker in 7+ condition for an additional $40 plus shipping.

As for your observation to the "modern"electronic junk that is floating out there you are RIGHT
on the fact that the late 60 and early 70's TV recevers are some of the best out there. I have a
RCA New Vista Color 23" recever in the entertainment system that uses mostly tubes. The only
transister that I can find in there is the UHF tuner mixer and osc. That thing looks BETTER than
my later model Sony Trinitron! So much for fancy widgets! I have to say that I like tubes better
(lets try a PENTIUM with a pile of 12AX7's) than transisters. As for my radios....Philco 48-1264
fully restored and the RCA with a NEW picture tube!
Keep'em glowing! 73's to the group

2767. HP Toner Cartridge Blowout

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-02 00:00:00 UTC
From: dlkfjasdj@kljasdflkasdjflsd.com
Message-ID: <3432fe1f.0@news.inreach.com>
Source record: 115676

Z-Bek has the following Toner Cartridges for Sale:

HP 4
Remanufactured: 64.95
OEM: 88.95
Yield: 6.8 K

HP 3si/4si
Remanufactured: 69.95
OEM: 104.95
Yield: 10k

HP 4V/4MV
Remanufactured: 89.95
OEM: 134.95

HP 5l
OEM Only: 64.95

HP 5P
Remanufactured: 69.95
OEM: 79.95

HP 5si
Remanufactured-109.95
OEM: 159.95
Yield: 15k

IBM 4019 Marathon (High Yield)
Remanufactured: 149.95
OEM: 194.95
Yield: 14k

IBM 4039 Marathon (High Yield)
Remanufactured:149.95
OEM: 204.95
Yield:14k

IBM 4049 Marathon (High Yield)
Remanufactured: 149.95
OEM: 204.95
Yield: 14k

Z-Bek is your Source for all your Toner, Ribbons, and Media supplies.

Z-Bek
310-419-1909

OEM - Original Manufactured Equipment

Yield: Estimated Amount of Pages per Cartridge (At 5% coverage)

Remufactured: Cartridges have all possible components replaced
with new parts, including a New Long Life Drum.

Warranty: Fully Satisfaction Guaranteed for 90 Days.

****

I have for sale the following original "operating and service" manuals for
Hallicrafters equipment. All are in very good to excellent (unused)
original condition. Each original manual is $13 postpaid to any address
in the continental U.S. Strong preference is for someone who buys all 27
original manuals for the postpaid price of $162; that's $6 a manual!

2771. Hallicrafters Model S41W

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-02 00:00:00 UTC
From: mclendon <mclendon@gte.net>
Message-ID: <6106kl$f1f$1@gte1.gte.net>
Source record: 115680

I just got one of these simple 3 band general coverage receivers before it got heaved into the dumpster. After forming the electrolytics, it works fairly good on .5-30mHz CW & AM signals - not too good on sideband though... there doesn't seem to be a bfo just a slide switch marked Broadcast-Code.

Can anyone give me any information on this Skyrider Jr radio such as years manufactured etc.? Has a sheet metal case and simple controls - must have been a starter radio in its day. Obviously this radio was well loved by some kid way back when.

Cheers - Mike

2778. TMC GPR-90 Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-02 00:00:00 UTC
From: Phillip Hopkins <peh@nortel.ca>
Message-ID: <3433B82B.6926@nortel.ca>
Source record: 115687

The sensitivity of these GPR-90 receivers in the broadcast band (only) is not nearly what I would expect for a receiver of this quality. But I have read in the GPR-90 manual that the sensitivity in the MW band has been purposely limited to 5 microvolts, while in the other bands it is at the maximum level of about 1 microvolt.

Is any one familiar enough with this receiver to comment on why this was done? Can the sensitivity on this band be improved in some way? I have briefly looked at the schematic for the GPR-90 and don't see how the sensitivity in the MW band was reduced.

Any suggestions would be great.

Thanks from:

Phillip Hopkins at

I just acquired a MINT HQ-170AC-VHF so am selling my HQ-110AC This radio is NEAR MINT. PERFECT front panel. A few very small paint chips on case but very easily touched up. This radio was acquired from the Colorado Radio Museum by the former owner. Radio plays great..better sensitivity than my ICOM. Could use "minor" freq. allignment. Reads about 20 kc low on all bands. Also, clock works perfectly but auto timer not hooked up. Finially the Cal Set knob moves the dial indicator slightly but not the way it should. Other than that, the radio is PERFECT. $150 plus shipping. I have matching S-100 speaker in 7+ condition for an additional $40 plus shipping.

Looked at a TV-7D/U manual and noticed no BIAS FUSE #49 bulb like civilian Hickoks. How do the military units protect the circuit? I am not a sophisticated electronic type, so maybe there's something I missed.

Thanks.

2782. Re: Need Info: BC-348 Connector Pin out

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-02 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <610tuu$hdf@sjx-ixn10.ix.netcom.com>
Source record: 115691

****IMPORTANT NOTE FOR THE BC-348****

The high voltage B+ supply is NOT returned
to ground in the BC-348. The B- leg of the supply
goes through some dropping resistors to provide
bias to the audio output, so you have to float
both B+ and B-, which is simple.
Lots of hams butchered the audio output stages
to "correct" the "problem", when five minutes
with the wiring diagram would have shown them
differently. The BC-348 has terrific audio
in its designed-original state. All you gotta
do is match the speaker properly, which you can
do with a 70-volt-line-to-Voice Coil transformer.
I think you use the 10-watt tap, but I don't
remember. Use the tap that sounds the best.
You can get the transfomer from Radio Shack,
but a *good quality* transformer sounds better.

The S-41W (white) is indeed a neat radio. It is the Echophone EC-1B
with a face lift. This thing was also repackaged as the original S-38
and has the separate tube for BFO (activated by the "code" setting).
Properly aligned and working, it is an excellent performer given the
relatively simple circuit.
This thing also has a "gotcha". The chassis (separated by some, most
likely, very aged grommets from the metal cabinet) has one side of the
power line switched directly to it. Make sure that this minimal
insulation between the chassis and the cabinet is intact. I recommend
an isolation transformer for these sets.
I have a picture and more info on the Echophone EC-1B on the BAPix web
page.

N1PGW Harry A Webber

Does anyone know how to reach Harry Webber N1PGW?

I have my cashed check for $375 (cashed 08-04-97)
and the UPS Strike etc has confused matters, but I
was last promised a tracking number several weeks
ago. No package or tracking numbers received.

I need to get in touch with Harry to determine what
has happened as this really dragging out...

We made our deal for the FT-101zd and SP-901 speaker
back on July 28, 1997. That was a long time ago!

Any help greatly appreciated.

I can't answer your question, but now that you mention it I recall noticing the same thing with a Hammarlund SP-600. It seemed to work fine on Shortwave, but even local AM broadcast stations seemed to be noisy. I admit that I was using a very short antenna. It's been a long time since I had the Super Pro, so this is just a vague recollection. Maybe it was psychological, expecting shortwave signals to be weaker but having less tolerance for "weak" local signals.

Well, the "Code" switch position turns on the BFO. It doesn't have a
product detector, but you can get SSB with judicious knob turning. Many
old sets don't (never did) have enough BFO injection. So, try turning
down the RF gain (turn up the AF gain for more volume) and see if that
helps. Also try tuning SSB signal for best strength with the BFO off,
then turn it on and adjust the BFO pitch control (if it has one) to get
rid of Donald Duck.

Good luck,
Steve Robertson

2794. unbuilt Eico VTVM kit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-02 00:00:00 UTC
From: KA9EGW@aol.COM
Message-ID: <971002134226_23689139@emout11.mail.aol.com>
Source record: 115703

Have had many offers and inquiries on the unbuilt Eico VTVM kit in original box. Have decided to auction it.
Please e-mail all bids to
ka9egw@aol.com.
Highest bid takes it!

2795. Hammarlund HQ 105 TR for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-02 00:00:00 UTC
From: JF <ntbr@mail.rpa.net>
Message-ID: <6112q6$s4v@snews3.zippo.com>
Source record: 115704

I have a hammarlund HQ 105 TR for sale. I am selling it for a little old lady who got it from a neighbor who is moving. I am an inactive Ham so she asked my if I knew anything about it.

Anyone interested? Is this thing a jewel or a junk? I didn't know there was such a vast amount of ham stuff on the internet. Very interesting.

It seems to be working on receive but I have no idea about transmit since I don't have a antenna. It looks to be clean and well cared for.
Is $150 a fair price?

thanks for any info.
Sincerely
Jim Fleming ntbr@mail.rpa.net

2796. eico vtvm kit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-03 00:00:00 UTC
From: KA9EGW@aol.COM
Message-ID: <971003075652_1031660041@emout16.mail.aol.com>

Have received many bids on the eico vtvm kit. Too many to reply to by the
each.
Highest bid by midnight CDT Friday 10/3/97 gets it.

2797. R390-A Low sensitivity 16mhz and up

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-03 00:00:00 UTC
From: k5fte@webtv.net
Message-ID: <612l4a$8v8$1@newsd-123.bryant.webtv.net>
Source record: 115613

My R390A works very well from .5 to 15.999 mhz. When I switch to 16 mhz and all above, the reciver drops sensitivity by about 75%. I`ve substituted tubes to no avail. I feel that I`ll have to pull the RF deck and start trouble shooting. Is there someone on this group that could give some pointers on where the problem could be? Thanks to All, Earl, K5FTE

2798. Military tone-squelch vs. CTCSS ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-03 00:00:00 UTC
From: "Hans Sundkvist"
Message-ID: <612lls$iuf@drn.zippo.com>
Source record: 115614

I am wondering if a modern low band VHF-radio with CTCSS would be compatible with military radios (e.g. prc25, prc77) that uses 150 Hz tone-squelch?

The closest CTCSS-frequency seems to be 151.4 Hz. Will that be close enough to open the squelch on the military radio?

Cross-posted to:
rec.antiques.radio+phono,rec.audio.tubes,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have an I-177B Tube tester complete with the separate outboard adaptor for later style tubes. This tester is the predecessor to the venerable TV-7. They are very similar in both appearance and operation. The tester is in A-1 excellent shape. The adaptor is in good shape except for a crack in the large porcelain 7-pin socket. The socket still appears usable and I also will include a spare socket. I have all the manuals and associated tube data. I'm asking $95 OBO + shipping.

2807. I wonder if...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-03 00:00:00 UTC
From: "John S. Dallas" <jim_dallas@hotmail.com>
Message-ID: <01bcd029$84e26f80$196a6d81@endo-jdallas.utmb.edu>
Source record: 115623

Dear rec.radio.amateur.boatanchors:

I have been offered a refurbished Swan-260 by an older, more experienced amateur. Being only 15, I do not, of course, remember when Swan and others contemporaries were making rigs like this (in fact I had never heard of Swan before now), and, to be honest, I just don't have a clue as to how modern a rig the 260 is or was.
Admittedly "modern" is a relative term, so let me go ahead and ask the questions I want to ask:

[1] I will probably be installing in an attic, and I don't want to subject myself my family, or the attic to anything more than 50 watts.

This may sound ignorant, but the power CAN be throttled down from the 150 or so watts that are posted in the specs, right? (By the way, I'm not so knowledgable about tubes, other than there is one in my TV and that they're big and transistors have mostly replaced them).

[2] I understand there is some sort of tuning "eye" or something on the 260, which I don't quite understand either. In fact, the whole concept of "tuning up" a rig is somewhat alien to me. My only on-air experiences thus far have been on 2 meter handhelds and mobiles, and to the best of my knowledge new HF rigs don't need to be
tuned up either(I know tuners have to be tuned, but that's different, right?)

[3] Is it possile to run into other QSOs becuase of VFO drift? Or should I not
worry too much about that?

[4] Can you run RTTY or Packet on an old SSB rig like the 260 or is the Xmit/Rcv Relay just too slow? How would you connect the TNC to the radio? Would the fact that a "high-impedance" mic is required create difficulties as far as this is concerned?

[5] Do older radios have better or worse audio (on both sides) than newer ones?

Thanks
Jim Dallas
KC5WXX

:::::::: YAESU FT-101E ::::::::
HF TRANSCEIVER

SERIAL NUMBER:

* 7 L 300489 (October, 1977)

STANDARD FEATURES:

* 160-10 meter AM / CW / SSB
* RF speech processor
* Noise blanker
* Original owners manual

YAESU OPTIONS INSTALLED:

* 600 Hz CW filter
* Cooling fan

To give some meaning to the rating of the condition of this set, I
have assigned a rating in accordance with the Collins Collectors
Association Technical Data Sheet G-0196. In its present condition,
my FT-101E meets all the requirements for EXCELLENT CONDITION as
defined in that data sheet. In addition, the unit meets all original
Yaesu operational specifications.

* No modifications!
* No scratches!
* No stains!
* Never used mobile or portable!

PRICE: $350 (I pay UPS shipping)

Yeah, But!

It is a historical 20 dollar radio I believe it is Hallicrafters fist attempt at a dual conversion receive and is the archetype of nearly every receiver (multi-conversion) they would build until the the SX-115. A 1650 First IF followed by a 50 Khz IF for selectivity.(Not too sure about the SX-88 as to its IF frequencies. So a turd it may be, but a significan one in the grand scheme. And as one fellow said, "The Big S meter IS cool! Who knows, with a bit of work you could perhaps make it as good as an HQ-170? (without the clock of course)..

Adios, Bob, KE6F

Wow...why do people do things like replacing sweep tubes
with 6146's!

I just purchased a new-old-stock matched pair of Sylvania
6HF5's from Antique Electronic Supply of Tempe, Az. Seems
that they have lots of already matched pairs in warehouse
bins...they did not charge me extra for matching (I asked
the salesman over the phone if he could check stock to see
if he had Sylvania...these were the matched pairs). Price
was $34.00 with shipping. Not bad considering real 6146B's
are twenty bucks each.

I would recommend replacing the 6146's with the 'HF5's only
if you are experienced with such surgery and are willing to
track down the sockets for the 'HF5's (this may be more
difficult). Neutralizing a Swan of this vintage is a
little tricky also.

Good luck...don't get in too deep. Remember, if all else
fails, you still have a fine receiver!

This radio (and many of the cheap Hallicrafters line of
this era) is a real dog. This radio will:

+ drift
+ exhibit dial slippage
+ hum
+ drive you crazy if you try to copy CW or SSB
+ warble if you tap the tabletop
+ need all new coupling/bypass capacitors
+ etc, etc.

Don't let the collectors fool you...this is a twenty dollar
radio. Collectors are the only ones that can really
appreciate a radio such as this. If you want to actually
use it, that's a whole different story.

And why would Hallicrafters put an S-meter on a radio
as big as its patheticly scratchy 4" speaker? Edsal would
be proud!

Hello group, and I apologize if this post is a bit off topic, but perhaps others have had to deal with this, or may have to deal with this in the future.

My question is simple. I have found a big transmitter that is located in the state of Georgia that I need shipped to New York. By big I mean T-368 size, 700lbs. The owner is unable to package the unit for shipment to a trucking firm. I do not want to rent a truck and drive down, far too long. I would like to have a local firm box/crate the unit for shipment, and deliver to a trucking company. Is this possible, are there such firms for this?

Has anyone ever run into this before, or does anyone have any suggestions?
Perhaps someone with shipping experience can suggest a solution?

Thank you for the bandwidth.

You can try to linearise 7360 with some negative feedback, too!!!

The main benefit using of 7360 in mixer configuration is from fact
that it always works while being in it's most LINEAR range - 100% of
time!

On contrary - almost all other devices used in mixers circuits
are driven from its best linearity point (at least - for a little
fraction of time) by heterodyne and much smaller interferences can
distort
useful signal at these moments. No matter what devices are used -
linearised or not, bipolars, FET's, or tubes, no matter - how many
gates or grids are used for mixing. All they are in NONLINEAR region
at these moments!
Brute force can help - you must feed mixer with plenty of
heterodyne - to ensure that any interference will not counterweight
hetrodyne's action. Fast switchers can minimise fraction of
non-linearity time.

Sometimes this works, sometimes not - as in modern multi$$$ boxes for
hams...

7360 uses beam deflection for heterodyning - this doesn't act on
linearity.
Just pure mathematical multiplying - so you can get maximum for nothing
(almost),
except that you'll generate some heat and light...
And if you like brute force - 4CX250 (four pieces) in double balanced
configuration is the best solution...

Xcuse - if I was speaking abt well-known things. I just pointed to one
aspect
of the problem, and agree 100% (almost ;^) with you, oldtimers,
elsewhere.

Had a great pleasure to read!

It seem's I'm off-topic a bit ...

Actually, no, it has to have nonlinearity to act as a mixer. It gets that
when it switches, via beam deflection, from one plate to the other.
The switching is not instantaneous, it takes a finite time to sweep
the beam from one plate to the other (which is proportional to the
voltages applied to the deflection electrodes). This is analogous to
the turn on/turn off time of the diodes in a diode ring mixer, the
harder you drive it, the quicker it switches. As the beam sweeps
off one plate, across the gap, and onto the other plate, you get the
familiar square law response (the beam has a finite spot size).

There is an example of using this tube as a balanced modulator
in the 1963 ARRL Handbook, pp 307-311. It does carrier
oscillator duty using cathode, control grid, and screen in a
Pierce circuit, and the portion of the beam passing through
the screen is then switched between the two plates via audio
introduced on the deflection electrodes, producing DSB in
the balanced tank circuit. In this design, that signal is then
link coupled to a McCoy 9 Mc crystal filter to produce SSB.

After a fashion, you might consider this a tube integrated
circuit since it combines different functions in the same
envelope.

Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I saved a small cardboard box full of tubes from the dumpster last August. I was looking through it last night and noticed a copule of large tube boxes with 1P21 tubes in them. The plates on them look very strange, and in one place the plate becomes a zigzag mesh of fine wire. Obviously some sort of specialized tube. What were they for?

I notice that AES (or some AES customers) seem excited about them, judging from the price they ask.

2853. Re: Military tone-squelch vs. CTCSS ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-04 00:00:00 UTC
From: Doran Platt <jeepp@erols.com>
Message-ID: <3436A959.8CDF785C@erols.com>
Source record: 115574

Its possible that the radios might work together tone-squelch as far as the MIL radio accepting the CIV tone, but most well designed CIV radios won't accomodate a tone that far off. Also, consider that the PRC-25/77 (et al) MIL radios still use wide-band FM (nom. 15kHz, vice 6 kHz or narrower for the CIV radios). Just a thought.

Source record: 115653

The receive sensitivity in quite a few of the later general coverage receivers is padded
quite a bit to prevent images and mixer overloading in the shortwave coverage from local strong signal AM broadcast. I've played with many a boatanchor, but have never used them for AM broadcast reception, at least to the point where I questioned
the receive sensitivity. Just a thought.

>K5FTE

The final coil rack is for the 16-32 MHz band.

The cams/slugs for that RF band are probably mis-aligned.
The fix is relatively simple if it is just slugs.

It is a photomultiplier tube. Basically, photodiodes followed by
secondary emission amplier stages. The photo generated electrons
accelerate to a dynode where they impact with enough energy to cause
even more electrons to be emitted which are attracted to the next dynode
and so on. They are high gain, low noise light detectors.
Does this help?

Message-ID: <19971005004800.UAA26714@ladder02.news.aol.com>
Source record: 115575

I recently purchased a SX-96 over the net. Due to the condition of rcvr being not quite what the other party said,
I am looking for several parts or a parts rcvr containing these parts in good shape.
1. The entire aluminum control panel under the knobs has
been wiped clean of all markings. I need either a
replacement panel or information on who can
silkscreen my old panel.
2. The S - meter cover is yellowed and shattered. So I
either need a replacement cover or a replacement
meter. The cover or meter from the SX-99 and SX-100
were identical and would fit if someone has one.
I am willing to pay a fair price and shipping if you can help me out. Please reply by E-mail to tchrme@aol.com.
Thank you and 73, Mike KF6KXG

Jay: yes, those Johnson Vikings have long been the radio of choice
for clandestine ops around the world. They were used quuite a bit
during the Central American wars. In El Salvador, "Radio Venceremos"
was on the air with Johnson gear. There is a book out about this
station: "Rebel Radio." Not much technical info, but there is an
occasional mention of the "Rebel Boatanchors."

Message-ID: <617r7i$9mk$1@eros.clara.net>
Source record: 115583

This receiver was the standard RAF issue general purpose radio at the start of WW2. It was used in conjunction with the T1083 TX. they were notoriously unreliable and difficult to operate, no surprise with 28 coils!!

thewe limitations were blamed for the loss of several aircraft in bad weather during the early years of the war.

These radios were superceded by the R1155/T1154 from Marconi.

Hope this info. is of interest and if you ever want to part with the receiver, letme know!!

Regards,

John.

I just acquired a MINT HQ-170AC-VHF so am selling my HQ-110AC This radio is NEAR MINT. PERFECT front panel. A few very small paint chips on case (3 to be exact-1/4" each) but very easily fixed. This radio was acquired from the former owner from the Colorado Radio Museum. Radio plays great..better sensitivity than my
ICOM. Could use "minor" freq. allignment. Reads about 20 kc low on all bands. Also, clock works perfectly but auto timer not hooked up (wires are in tact). Finially the Cal Set knob moves the dial indicator slightly but not the way it
should. Other than that, the radio is PERFECT. $140 plus shipping. I have matching S-100 speaker in 7+ condition for an additional $30 plus shipping. Will sell both units as a package for $160 plus shipping. You will not find a better 110..

>Thanks in advance.
>Joe

Joe,
This is a very good radio to own. It was designed by Dr.Wadley of
the Barlow/Wadley tean and uses the Wadley loop principal for reception.

The radio is in abundance over here in the UK.

I have an RA17L which evidently has better filters than the RA17.

Alongside my JRC NRD535 there is a no difference! Mind you there is NO
synthesyser or semiconducter noise to contend with on the Racal !!

I am on my third now and would recomend them to anyone. They are large
however and you will need a block and tackle to lift it (or an
understanding XYL).

The rectifier tube is the one that goes normally, but this is a doddle
to get hold of. I think I paid two GBP for mine when I have had to
replace them.

A thing that crops up many times at the Radio Rallies over here in UK
are the complete sets of spare tubes for the beast. The UK government
must have had a very high estimation of the number of times they would
have to change these tubes !!

Anyway, hope that this has been of assistance.

Do you need an operating manual? I can photocopy one for you if
required.

Take care and 73 de,

2898. simple radio controlled project/circuit???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-05 00:00:00 UTC
From: ccn011@email.mot.com
Message-ID: <875937483.12178@dejanews.com>
Source record: 115598
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi,
I always interested in radio controlled stuff, like
radio controlled car, plane, boat, etc. I used to have a radio
controlled car (which I still do) and a radio controlled glider (i
never got it up to the air though!).
What I really interested to know is the receiver and the
transmitter
part. I have yet to find out how they actually work. I was just
wondering whether you know if there is any simple radio
controlled project/circuit around that I can build. I did look through
the web , but dont seem to find any. If you happen to have or
know a site, please let me know. Thanks in advance.

p/s: please reply to ccn011@email.mot.com if possible.

Hi. I am assembling a 1950's vintage novice CW station. I already have the receiver and am looking for a transmitter. Something like a Heath DX-40 or equivalent from Hallicrafters, Johnson Viking, would be great. Crystal control is fine, VFO would be better. I would like the rig to be nice cosmetically as well as fully operational with a manual if at all possible. If you have such a unit you would like to sell, please send me an e-mail. 73, Don KK9H

Body handling: HTML body converted to readable text

Este es un mensaje con m�ltiples partes en formato MIME.

------=_NextPart_000_01BCD186.018D94D0

Are you fed up of counting up and down manually you listing of the DXCC
countries in order to know your current status?
Are you tired of copying your listings of worked and confirmed countries
from one sheet to another every time there is an addition of deletion of a
country?
Don't you want to say "I have worked 150 countries, more or less" any more?
Have you ever spent an evening searching that paper or notebook where you
used to trace your DXCC status?

Here you have the definitive solution. The DXCC Worksheet.

HTTP://www.redestb.es/personal/g_sampol

What is the DXCC worksheet?
It is an Excel worksheet that helps you trace your status of DXCC
countries. You only have to fill the cells with your worked and confirmed
countries and the totals will be automatically updated. You don't have to
make any calculation !

What do I need for using the DXCC worksheet?
You need a computer running Microsoft's Excel Version 5.0 or 7.0(97)
Availability for former versions of Excel can be studied on demand.

Which are the facilities of the DXCC worksheet?
It provides an updated listing of the DXCC countries (including the deleted
ones). This listing includes:
Common prefix/prefixes
Name
Continent
ITU zone
CQ zone
Provides information on the date of insertion or deletion of the country.
Allows to enter data for any band from 160 m. to 23 cms. plus a
customizable band (3 cms, etc.).
Allows to enter separate data for SSB and CW plus a customizable mode
(RTTY, SSTV, etc.).
Automatically calculates:
Number of worked countries per band in SSB
Number of worked countries per band in CW
Number of worked countries per band in the customizable mode

Number of worked countries per band in mixed mode
Number of confirmed countries per band in SSB
Number of confirmed countries per band in CW
Number of confirmed countries per band in the customizable mode
Number of confirmed countries per band in mixed mode
Total number of countries worked in SSB in the WARC bands
Total number of worked countries in CW in the WARC bands
Total number of worked countries in mixed mode in the WARC bands
Total number of confirmed countries in SSB in the WARC bands
Total number of confirmed countries in CW in the WARC bands
Total number of confirmed countries in mixed mode in the WARC bands

How can I get the DXCC worksheet?
You can download it from my web site at:
HTTP://www.redestb.es/personal/g_sampol

another problem using 6146 type instead of sweeptubes is
6146 type never live 18-20 years with heater voltage on. 6146 sicken
and emission decreases when not operated, while the sweep tube does
not have such problems. The 6146B may not last 5 years, while many
sweep tubes may still work after 20 years.

Ned,

Consumer electronics is one of the few things to actually decline in price based on the operative CPI. That National HRO actually sold for about $2,200 in today's dollars. The SX-88 of the 1954 era aold for about $4,000 in today's dollars and a KWS-1 - 75A4 combination sold for about $9,000 in today's dollars.

A good rule of thumb when calculating in constant dollars is... 1946 - 1950 multiply by 6.5 1951 - 1955 multiply by 6 1956 - 1963 multiply by 5
This will get you in the ballpark.

Source record: 115529

I have two (2) R390As for trade:

#1 is a EAC in very good to excellent shape with new tubes,meters and orginal covers and comes in a Stantron 19" rack cabinet. Works excellent and it came from Fair Radio. Also has manual.

#2 is aEAC also from Fair Radio and is in very good shape...it works but has a bad audio module and a replacement PTO (cosmo) which I was neverable to track properly...will also send along the original PTO...has all new tubes,meters and covers but no case.

I would like to trade both of them to the same party for a Collins 51S1 ...the51S1 must be in the at least eaisly repairable condition and look good cosmetically. ....I will be glad to deliver and pick up any where in the Los Angeles,San Francisco or San Diego areas.

Please reply by e-mail or call me in L.A. at 310-823-4456

Ned,

I can not disagree with anything you say. Yes you would have to take into account the tube vs solid state construction as well as the economies of scale with mass production techniques. As you say, those National receivrs were virtually hand crafted. However, industry was geared up to produce the tubes, tuning caps, and bandswitches which have been technologically outmoded today. With the Marantz and the Dynakit, there is no one producing parts to any large extent. Small runs mean high prices. If the

transister or IC were never invented it would be interesting to see if electronics would have in fact decreased in price in terms of todsy's dollars.

On the other hand, automobile production has been automated to a large extent. I did a little research today on the cost of a Chevy 4 door full size sedan in 1951, and it was about $1,800.
If the CPI held true, that should be about $10,400 today. The full size Caprice, last I looked, sold for about $22,000, or twice the rate of the CPI. of course there is more equipment and light year ahead technology in it. A house is another interesting example. My house new sold for about $12,000 in 1958. not it appraises at 13 times that amount. New construction for the same size home costs even more. Take a look at health and auto insurance costs from the same time period, or the costs of a college education. Maybe the CPI has been misfigured all these years on the low side?

>suggestions?

Yes, there are firms that crate/ship such items.

I once had to deal with a CAT scanner (an entirely separate and very funny story) and I had several rigging/shipping/export firms bid on the project.

Most of these firms are professional and costly.

I would suggest that you contact some national moving companies and find out if they could add the unit to a trailer going your way. The size, weight and fragility of a your transmitter are a good match for a household mover as long as they do not have to get it up or down any stairs. See if you can get the transport cheaper if you meet them at their destination with a couple of helpers and your own truck.

Good luck...

2924. FS: Q-Probe

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-06 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <61bljq$j70$1@juliana.sprynet.com>
Source record: 115533

Q-Probe?

This is a fascinating little device to allow the use of a cheap general purpose scope to look at HF waveforms only a few miliwatts strong.

Made by Transitron in Manchester, NH, only about 15 miles North of here, the Q-Probe is built into a painted large IF can. It's a very cleverly designed all band tuner with a vernier drive dual section capacitor and a diode takeoff.

The idea is that you use a 3/4" closed loop on the end of a piece of coax (supplied) and plug this into the Q-Probe. The loop is positioned near the tube or coil you're measuring. The manual suggestes an inch or two of deflection from the grid circuit of a 5763.

You use short lengths of bus wire to connect the Q-Probe to the scope's deflection plates, and the diode takeoff is connected to the sync input of the scope.

By using a high Q tuned circuit, only a few milliwatts of rf around a transmitter or receiver are needed to provide the 50 or 100 needed for scope deflection through the plates.

I rarely come across something that's in new-in-the-box condition, but this comes with its cardboard box and manual folded up inside, and looks like it was never used until I removed it, just to try out once. It works amazingly well.

Just one of those things I need the money for more than I need the unit. Price $40 plus $5 shipping if needed from Nashua NH anywhere in the US.

I just acquired a MINT HQ-170AC-VHF so am selling my HQ-110AC This radio
is NEAR MINT. PERFECT front panel. A few very small paint chips on case
(3 to be exact-1/4" each) but very easily fixed. This radio was acquired
from the former owner from the Colorado Radio Museum. Radio plays
great..better sensitivity than my ICOM. Could use "minor" freq.
allignment. Reads about 20 kc low on all bands. Also, clock works perfectly
but auto timer not hooked up (wires are in tact). Finially the Cal Set knob
moves the dial indicator slightly but
not the way it should. Other than that, the radio is PERFECT. $140 plus
shipping. I have matching S-100 speaker in 7+ condition for an additional
$30 plus shipping. Will sell both units as a package for $160 plus
shipping. You will not find a better 110..

Some time ago Ulrich Rohde published some circuits of mixers made out of an array of switched amplifiers, each one being one of the transformer-feedback bipolar transistor type. His published results were quite good.

> The main benefit using of 7360 in mixer configuration is from fact
> that it always works while being in it's most LINEAR range - 100% of
> time!
>

You seem to be making the assumption that the switching process of the beam deflection tube does not affect the linearity of the beam modulation process. This will not be strictly true if any of the deflection field has any influence on the electron gun region. Also, the electron beam modulation by the incoming signal will not be perfectly linear, any more than we could make perfectly linear triodes, tetrodes, pentodes etc.

The 7360 was certainly excellent, but it was not perfect. I have wondered about making a double balanced mixer with a pair of matched 7360 tubes....

> On contrary - almost all other devices used in mixers circuits
> are driven from its best linearity point (at least - for a little
> fraction of time) by heterodyne and much smaller interferences can
> distort
> useful signal at these moments. No matter what devices are used -
> linearised or not, bipolars, FET's, or tubes, no matter - how many
> gates or grids are used for mixing. All they are in NONLINEAR region
> at these moments!

Consider the transistor tree mixer such as the Plessey SL6440 or Motorola MC1648/MC1496 families. The signal applied to the "tail" transistor is amplified in a device which is 110% of the time biassed into its most linear region, the signal current it produces is diverted by the transistor pair above it - this resembles the beam deflector of the 7360 very closely. However, their performance is not in the league of the 7360, nor of the latest crop of switch-mode FET mixers.

Structurally, the 7360 was far ahead of its time, and the actual power level it was capable of running gave it the advantages of brute force, too. Together these advantages made an outstanding mixer. At a time when most receivers (though there were a couple of honourable exceptions) had mixers with third order intercept points in the 0dBm region, the 7360 was in the over +30dBm class (I made one and measured it about 15 years ago)

It has taken many years, but semiconductor mixer technology has finally caught up.

> 7360 uses beam deflection for heterodyning - this doesn't act on
> linearity.

There is a small effect of the seflection fields in the electron gun area that does have a small effect on the linearity of the modulation of the electron beam, giving some non-linearity due to the oscillator signal, and the modulator itself has its own non-linearity problems. It is not perfect, but until fairly recently, it was the best.

> And if you like brute force - 4CX250 (four pieces) in double balanced
> configuration is the best solution...
>

This isn't really a beam deflection approach, it's a tree mixer, I suppose. Beware that the 4CX250 was designed entirely for AM class C and FM use, its linearity is poor compared to tubes designed for linear operation.
With the amount of brute force possible, of course, the result would still be extremely good, though a more linear triode of comparable power could be even better.

> Xcuse - if I was speaking abt well-known things. I just pointed to one
> aspect

It's an area I've had a long term amateur interest in, and I've also been involved professionally in extremely linear receiver structures for measuring equipment. I'm enjoying the discussion immensely!

> of the problem, and agree 100% (almost ;^) with you, oldtimers,
> elsewhere.

Ooops, a few friends who read this group will start teasing me about that! I don't feel like an oldtimer. I'm 43 years old, though most people would tell you that my mental age is a lot less than that :-)

> Had a great pleasure to read!

Me too

Ok, past posts have had little response. Now I want to SELL this radio..NO ROOM!

I have an HQ-110AC This radio is NEAR MINT. PERFECT front panel. A few very small paint chips on case (3 to be exact-1/4" each) but very easily fixed. This radio was acquired by the former owner from the Colorado Radio Museum. Radio plays
great..better sensitivity than my ICOM. Could use "minor" freq.allignment. Reads about 20 kc low on all bands. Also, clock works perfectly but auto timer not hooked up (wires are in tact). Finially the Cal Set knob moves the dial indicator slightly but
not the way it should. Other than that, the radio is PERFECT. $110 plus shipping. I also have matching S-100 speaker in 7+ condition for $30 plus shipping. Will sell both units as a package for $130 plus shipping. I doubt you will find a better HQ-110..

Gentlemen,
I'm new to this group. I am not radio literate, but restore WWII Military Vehicles. Looking for either shells of SCR 508 etc jeep radios, or "morale" radios. One that is suggested to me is a Hallicrafter "Echophone". Would be interested in a repairable unit for display with WWII jeeps. Thanks 8-) Tom Campbell

Jim:
As a one-time owner of a Swan 260 (in fact, I bought it when _I_ was 15,
when I got my Advanced ticket, way back in 1971), I can answer some of your
questions, I hope.

The 260 does not have a control to vary the RF output level (it is one
of the few SSB transceivers that does not have such a control). It is
easy to add one, which I did on mine. (The 260 was designed as a
"bare-bones" transceiver, with only the minimal controls necessary for
operation; the later 270 and 300 Cygnets are "optioned" versions of the
260.) As for the attic antenna, I'd recommend that you go with an
"invisible" thin-wire outdoor antenna instead, if at all possible; then
you need not worry so much about RF exposure. (My 260 put out about 110-120W
on all but 10 meters, where I got about 90W; that's CW output.) You
could make an easy, reversible mod to get the power down to the 50W
range and keep it there; email me if you buy the rig and need to do this.
(I actually still have my 260, although it had been extensively
modified and then suffered some damage in moving.)

>[2] I understand there is some sort of tuning "eye" or something on the
>260, which I don't quite understand either. In fact, the whole concept of
>"tuning up" a rig is somewhat alien to me. My only on-air experiences thus
>far have been on 2 meter handhelds and mobiles, and to the best of my
>knowledge new HF rigs don't need to be

>tuned up either(I know tuners have to be tuned, but that's different,
>right?)

The 260 has a "magic-eye" tube for tuning rather than the usual needle-type meter. It's great fun to watch; it responds instantaneously to voice peaks, and makes a better indicator of flat-topping (overdriving) than a meter. I wish I had one for my current solid-state HF rig! You can also hook up a meter via a jack on the back of the 260 (just a generic 0-1 mA meter, which any old-timer will have lying around, with a resistor in series; the manual gives the details).

The tuning process for tube-type HF rigs is something like adjusting an antenna tuner. You're matching the output impedance of the final tube to the impedance of the antenna. It's very easy to do -- there are two controls, usually labeled "tune" or "plate" (which affects the input capacitor in the output tank circuit) and "load" or "antenna" (which adjusts the output capacitor). The procedure varies slightly from rig to rig (and operator to operator), but the idea is to tune to resonance and get maximum power transfer with appropriate tube current.
>
>[3] Is it possile to run into other QSOs becuase of VFO drift? Or should
>I not worry too much about that?

Swan used a bandswitched VFO on the 260, which means that the vfo (the oscillator being tuned when you move the main tuning dial) is actually changed abruptly in frequency when you change bands. This is not as nice as keeping the VFO in the same range all the time (like on Collins and most other tube rigs), but Swan engineered the VFO system pretty well; I had no problem with drift even on 10 meters. Of course, you can't read your frequency down to 10 hertz; you're lucky if you get 5 kHz accuracy on 10 meters. But a crystal calibrator (a 100 kHz oscillator, whose harmonics can be heard through the whole HF range) will keep you out of trouble. The VFO may not be stable enough for digital modes, though (see below).

>[4] Can you run RTTY or Packet on an old SSB rig like the 260 or is the
> Xmit/Rcv Relay just too slow? How would you connect the TNC to the
> radio? Would the fact that a "high-impedance" mic is required create
> difficulties as far as this is concerned?

The impedance problem is easy to fix, but the basic stability of the rig's oscillators is not so simple to fix. Low-end rigs like the 260 were quite stable enough for SSB contacts. They were invented before HF packet (and other digital modes) were thought up; RTTY was around, but people weren't doing it with Swan 260s. The high duty cycle of many digital modes is a problem for rigs with TV sweep tubes in the output stage (these tubes could handle the high-current peaks of SSB surprisingly well, but weren't made for extensive key-down time -- and neither were the power supplies in some rigs). The 260's transmit-receive relay is no speed demon, but even if that could be sped up, the 6LQ6 output stage would require you to keep the power output way

down to avoid burning up the tube.

> [5] Do older radios have better or worse audio (on both sides) than
>newer ones?

Most of us boatanchor lovers think the older rigs sound better, often in transmit and almost always in receive. It seems like the designers of many current-model transceivers pay little attention to the audio stages.

Have fun!

73,
Ted Zateslo, W1XO

I really hate it when someone beats-around-the-bush. :)

I've had this radio (s-76) for approx 2 weeks but if I didn't know better
I'd swear I got it from you. :)
Why do I mention this? This is what I've discovered about my particular
S-76:

-> + drift
-> + exhibit dial slippage
-> + hum
-> + drive you crazy if you try to copy CW or SSB
-> + warble if you tap the tabletop
-> + need all new coupling/bypass capacitors
-> + etc, etc.

Except for the "cap" listed , everything else is pretty much as you
describe.

Having said that , I'm happy , except for the price I payed & have no-one
to blame for that except me , with my first real live "ba".

I had no illusions about this radio. I did know that it wasn't a "top of the line" radio (in its day). I figured I had to start somewhere & the S-76 was at the right place at the right time for me to buy it. (or the wrong time depending at how you look at it :0)
I certainly did not get into this facet of the hobby with an investment strategy in mind.

I have had a ball tuning / id'ing freqs without punching them in digitaly before hand. Yea it drifts but if I need to copy non-drifty :) transmissions , I use my 535. Also ,for some nostalgic reason(?) , having to tap on the rear now & then for a better pick-up of a signal does not really ruin my day.

Anyway I guess it all comes down to whatever turns you on.

See Ya ,
Al ... ajd@tomco.net

Arbi,

There is a book out that gives instructions on making
replacement batteries for surplus gear. The concept is
that given the dimensions and an appropriate number
of the small 9 Volt batteries, you can come pretty close.

I do not recall the title, but it has been advertised from
time to time in QST, CQ, 73, etc. Is available from EEB and
the typical radio book dealers.

I seem to recall it has a play on words title, "power-up"
or something similar????

>wanting to obtain some Collins gear, either a KWM-2(A) or S-Line, but I
>must confess quite a bit of ignorance to some of the details of these rigs.

Barry:

The main difference is the KWM-2A has an additional crystal deck to add
more spectrum coverage. Its easy to spot the very different band
switching arrangements.

Later KWM-2As had plug-in relays, dial brakes, Teflon wiring, etc.

> Is there a good place, either WEB site or other reference, where I can get
>an overall aspect as to the specs for these and/or other Collins gear?
>

There are a couple of good resources - the Most Excellent WA3KEY Collins
Virtual Museum (search Yahoo on Collins Radio and you'll find it) and
the Collins Collectors Association Website run by Jay Miller, KK5IM as
well as the Collins Reflector (listserv@listserv@tempe.gov - send
e-mail with subscribe collins in the body) as well as thir archives which
are accessible through the Web.

Plus there's the Boatanchors-List@theporch.com as well as the Collins list
at qth.net.

Enjoy!

73,

Michael, W1RC

>N4BUQ@aol.com

The most obvious distinction between the 2 and 2A is the addition of a second crystal board. You can stuff the warc bands into it without having to change crystals.

The other differences depends on modifications and are subtle. Some 2's have had the upgrades done such as the AGC fix, the VOX fix, etc... which were done in the production of the 2A. For example, early 2's had open relays. During the production run a few years later, sealed relays were incorporated. I believe all 2A's have the sealed or plug in relays.

I cannot say this with 100% accuracy so take this line with a grain of salt...I think the run of 2A's started with the introduction into them of teflon shielded wire.

Go to Yahoo and search the "Virtual Collins Museum". Lots of good info there on the Collins stuff.

Source record: 115422

I have an Icom M-600 with a AT-120 antenna tuner connected to a shakespeare 293 , 23ft antenna. It is grounded to a 4 x 12 dynaplate. I have some problems with this rig. When I transmit in 10 meters everything is ok apart that it shift of frequency. When I transmit in 20 meters ham radio frequencies the indicator of modulation go to the end and freeze there for 15 seconds and nobody can hear me. I can hear anybody on all frequencies. I know that it is easier to hear than to transmit especially if your rig is not properly set up.

If somebody has an answer to my problem I would appreciate it.
The M-600 is unlocked for ham frequencies.

Message-ID: <61j1vi$ro6@northshore.shore.net>
Source record: 115508
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Annoucing a new mailing list:

The R-390 Mailing List is for the discussion of the features, operating, troubleshooting, repair, maintenance, improvements and general lore related to the R-390 family of radio receivers which were developed for military and government applications. This group includes the R-390, R-390A, R-392 as well as their variants such as the R-389 and R-391. These radios were designed and developed by the Collins Radio Company of Cedar Rapids Iowa but were made by different manufacturers under various contracts spanning almost 35 years from 1950 to 1984.

The List administrators are concerned with the growth of speculators and profiteers which have been pervading the vintage radio hobby of late. Consequently we have adopted the following guidelines on a temporary basis in the hope that the abuses seen elsewhere will not occur here. FOR SALE, WANTED and SWAP postings by PRIVATE PARTIES are acceptable but not encouraged due to the many other alternative outlets for that information. Furthermore, we request that such posts be limited to the equipment under discussion. Commercial postings, announcements and SPAM are NOT welcome. If in doubt of an article's suitability, DON'T POST IT and ASK!

It is hoped that all subscribers will contribute material to the R-390 List as it is the knowledge, wisdom and experience that will make t his list a useful, informative and valuable resource.

The advisory board of the R-390 List are:

Co-administrators are Chuck Rippel, WA4HHG, and Michael Crestohl, W1RC.

Historical Advisor is Tom Marcotte, N5OFF.

To subscribe to the list you can send mail to:

majordomo@qth.net

with the following command in the body of your e-mail mesage:

subscribe r-390

Please address any questions to: crippel@exis-net
mc@shore.net

PLEASE include [R-390] in the Subject: line

3018. Replacing old capacitors with higher values???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-09 00:00:00 UTC
From: mc@shore.net
Message-ID: <61j18a$o22@northshore.shore.net>
Source record: 115511

Hello Everyone:

I have decided this winter to examine ALL my stuff and re-cap as needed.
Most likely electrolytics will be prime candidates as well as those
nice old Sprague "Black Beauties" and any paper/wax caps I may find.
I plan on using Sprague "Orange Drops" wherever possible except
in RF circuits.

Recently I posted a query to the COLLINS Reflector as to the source ot
electrolytics and an interesting thing came up that might be worthy of
discussion.

I was always under the impression that the value of capacitors in certain
application such as bypass and coupling were not critical provided they
were higher than originally specified, so a .01 cap could be replaced
by a .022, .047 or whatever was handy. With power supplies it was
a bit more critical with capacitor-input filters than with choke-input
filters. So I guess I want to query this forum on the subject of
replacing capacitors with higher value than what was specified ....
What circuits is it okay and how high can you go and what circuits is
it not recommended?

73,

Mihael, W1RC

Good evening firebottle fans...

As many of you know collecting new junk, (Errr, make that
"Wonderful Old Classic Artifacts!" Yea!) at hamfests along with
getting rid of the junk you hauled home two or three fests ago is a
large part of the fun for many in our hobby.

One of boatanchors elderly statesmen, a man known to many, and even
liked by a few... Has received the highest honor achievable:

The "1000 lbs (1/2 Ton) a Hamfest, Lifetime Achievement Award."

Join me in congratulating our very own; * Nick England *
(Please applaud now...., thank you. :-)

Nicks stellar showing during this years Shelby hamfest, coming on the
heels of last years incredible performance at Shelby, made Nick a
shoo-in winner for all three judges...
(Me, Myself, and I)

Nicks 1997 performance, his award and his grim, (I'm going to get that
boy!) look on his face, can all be viewed on line in the privacy of
your own home... :-)

Point your browsers to: www.mindspring.com/~johnmb/

and take the link you'll find there to the "award"....

I'd like to thank several people who helped make Nick's award
possible,
(Plus maybe he will take it out on them first, they are *lots*
closer...)

John Poulton, who helped set Nick up for having his picture taken when
"surprised" by his award. And John Brewer, who provided the web space
allowing us to spread the "fun" around, and share it with boatanchors.

-Larry Ware

3058. Best Base

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-11 00:00:00 UTC
From: JEEPMON <jeepmon@interaccess.com>
Message-ID: <61o71enfr1@nntp3.interaccess.com>
Source record: 115374

I am interested in purchasing a used HF xrcvr rig. I m looking
for at least a triple conversion receiver one. All bander of course. I am
willing to spend upwards of $1000. I am currently looking at a Kenwood
940SAT and an Yeasu 757. Are both of these bases and have their own power
supply?? Do these have 6M also. I don't care about digital. Can u recommend
a GREAT H.F. rig base (with internal power supply)? How do the 940 and 757
compare? Any other suggestions? I know that ICOM makes a model 706 (I and
II) that are H.F. xrcvrs with both 6M and 2M, but it is a mobile. Is there
any Base H.F. rigs that cover 160-10M with 6M also (2M is not that
important now as I would like to get a separate 2M base after an H.F.
base). I hear that Kenwood , Icom, Yeasu all make top of the line equipment
but the tech and general support from Kenwood is severely lacking... I am
perfectly willing to purchase an older unit such as an FT101 or something
similar but I don't know what all those older radios do nor any of their
specs. Is their a book that has pictures of all those old radios and newer
ones to with general specs? I would pay lots for a book like this. It may
sound silly to say but aesthetic do mean something to me, to the respect
that I want a one piece base unit not separate speakers, power supplies,
tuners, and separate VFO's, etc.
Please help me if u can thanx!

Hi
Might I suggest that you look for a TR-4C handbook and compare what is
different to TR-3, then it is possible to use some modifications or
accessories for TR-4/TR-4C (?)
I had TR-4 and found discovered by studying at TR-4C circuit diagram
that an extra audio amplifier was used to improve the lack of audio
gain, any transistor might work (2N3393)

I heard 8TJM@CONCENTRIC.NET say:
: WONDER WHAT A MINT SX 115 IS GOING FOR THESE DAYS?
: THANKS

The last CCA Very Good-Excellent SX-115s I saw for sale were in the $600-$700 range. If it's not NIB and essentially unused, 'mint' probably doesn't apply, but if you had one like that, you could write your own ticket. If its buggered up in any way at all, derate accordingly. If it doesn't have its original manual or box, derate accordingly. If you don't have some sort of matching speaker (R-47 or R-46/A/B), derate accordingly. Et cetera, the usual collector quibbles, if you want to sell it to a collector.

Somebody who just wanted to use it as a radio, instead of something to wave at his buddies, might be willing to pay $200-$300. Mine was $225 or thereabouts, just a few years ago (Excellent, w/manual). Nice radio.

>Dave W9VI
Well, assuming that the IC751 is the same. Sounds like the PLL is out
of lock. Check for 6.5 V on R46 @ 7.9999Mhz mode LSB General. Adjust
C78 to get the correct voltage measurement. Says in the service manual
to use an oscilloscope but a digital volt meter -should- (haven't
tried it so might be wrong) work if you don't have one. Or if you
don't have a meter, try tweaking it so that your receive comes
back-checking to make sure that it works in the whole band from 100Khz
to 7.9999Mhz.
C78 adjust for 6.5V @7.9999Mhz
In case you also need to adjust for the next 3 bands.
C88 adjust for 6.5V @14.9999Mhz mode USB General
C97 adjust for 6.5V @21.9999Mhz
C107 adjust for 6.5V @ 29.9999Mhz
Confirm measurements by checking for 3V at 8,15 and 22Mhz.
Look for the PLL board, the large square metal can toward the back of
the radio has the adjustment points in it. There will be 4 holes in
the top to access the adjustment points. The hole closest to the front
of the radio is C78, the next one behind it is C88, next is C97, next
is C107. R46 is on the left side of the metal can containing the
adjustment points and a little less half way to the middle of it.
Marked on the board so should be easy to find. The PLL board that you
are looking for is found by taking the bottom cover off of the radio
and it will be the board to the right hand side as the radio is upside
down with the front facing you. That is my opinion of what needs to
be adjusted- hopefully it will help. I had the same problem once and
that did the trick. Actually I did a full alignment but that was the
adjustment procedure that was out of whack.

> What circuits is it okay and how high can you go and what circuits is
> it not recommended?

It is better to stay with the part values specified. After all, they were designed once upon a time! I suppose screen bypass caps aren't too critical, but you wouldn't want to put high values in the AVC circuits (tube grid circuits) for example.

Besides, you are in the restoration business. These sets aren't in production anymore. Surely you can afford $0.30 or so for the proper parts. Putting the set back in 'new' condition should be part of the fun of getting the set to run again.

Besides, the last thing I want to see when I open a set is "tech tracks". They make me sick and very wary. Try to replace parts in a way that makes the set look original. It just might work that way, too, when you are finished!

A friend of mine, Bill, WA5MWJ (501) 646 3859, has a 270G-3 and a Viking 500 for sale.

The 270G-3 I have only seen from across Bill's garage, but it looked very good from that view. He wants $150.00 for it.

The Johnson Viking 500 is in use in his shack and it looks beautiful. Not mint, but probably as near to it as you can expect to find. It's nice enough that I'll probably regret posting this, instead of just buying it myself. Bill wants $1000.00 for this rig, and I expect it will be pickup only in the Fort Smith, Arkansas, area.

Bill is not online, so interested parties should contact him directly at the telephone number above.

I recently purchased a Central Electronics 100V transmitter, circa 1959. Unfortunately I did not get a manual with the rig. If you have a manual you can part with, please let me know what you are asking for it. If you prefer to copy it, let me know the cost.

I'm very impressed with the construction and design of the transmitter, even though it is a phasing type SSB transmitter. Do you know of any reviews in CQ or QST on the rig? Do you know of any mods that have been published? If you do, can you send me info on the magazine, issue, description, etc.

Thanks for your efforts,
Bill Abate, K3PGB

After all these years of seeing people (and movies!) get totally undeserved awards, FINALLY someone I know gets some truly merited recognition! FB Larry! Congratulations Nick!

I'd like to point out that the benefits from all that Heathkit Hauling have spread far beyond Nick's (crowded!) hamshack. For example, the power transformer in my DX-40 was once part of the tonnage that is being recognized with this award.

There are Oscars, and Emmys and Golden Globes... What do we CALL this 1000 lb. Lifetime Achievment Award? An Anchor? The Hand Truck?

From: WA0KDS <WA0KDS@mcipnet.com>
Message-ID: <3440C321.70E7@mcipnet.com>
Source record: 115263

I need a switch for my recently required SB110A.
The part number is 63-384.
It is the 2 section 4 position switch used for the mode selector.

Half of the switch is still usable but the other half went up in smoke.
So if you have a switch that is even bad I might take it and try to make
the one I have work or yours work.

I do not know if the rest of the SB-LINE use the same switch.
A cheap junker SB110 if that part is there would be considered.

Any help will be appreciated.

The R4C would be the best for CW -- especially if you could find the Sherwood filters. There WAS a digital readout that was made. There was also a digital box that functioned as a VFO. I don't remember the names, but I did own one years ago.

Hello
A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought,"Yeah, right, this must be a scam",but like most of us, but I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 mewsgroups.(There are thousands) No catch, that was it. The main difference between this system and others is that you have a mailing list of 6 instead of 5... This means that your average gain will be app. 15 times higher!!!
So after thinking it over, and talking to a few people first, I thought about trying it. I figured what have I got to lose except 6 stamps and $6.00, right?
Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!
Then I invested the measly $6.00.....
Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly.....
It's certainly worth $6.00, and 6 stamps, I spent more than that on the lottery!!
Let me tell you how this works and most importantly, why it works....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is very simple and consists of 3 easy steps:
STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US$1.00 bills (or equivalent in your local currency) and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one
paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service by this. THIS IS ABSOLUTELY LEGAL!

Mail the 6 envelopes to the following addresses:
#1 C.Fisher
6720 S. 121 W. AVE
Sapulpa, OK 74066
USA
#2 Brian Wright
3898 Round Meadow Ln
Hatboro, PA 19040
USA
#3 S.Schoenfeld
7 Spencer Circle
Marlboro NJ, 07746
USA
#4 Qing Jiang Lee
5280 Lacombe Ave, #3
Montreal Quebec
Canada
#5 Greg Elder
5611 kevin Ave
Orlando, Florida 32819
USA
#6 Eben MacNeille
34 Buswell St. Apt #18
Boston, Massachusetts 02215
USA
STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make!
Don't know HOW to post in the newsgroups? Well do exactly the following:

DIRECTIONS - HOW TO POST TO NEWSGROUPS

Step 1.?You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and click and hold down your mouse button. While continuing to hold down the mouse button, drag your cursor to the bottom of this document and over to just after the last character, and release the mouse button. At this point the entire letter should be highlighted. Then, from the 'edit' pull down menu at the top of your screen select 'copy'. This will copy the entire letter into the computers memory.
Step 2.?Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' pull down menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list. Remember to eliminate the #1 position, move everyone up a spot (re-number everyone elses

positions), and add yourself in as #6.
Step 3.?Save your new notepad file as a .txt file. If you want
to do your postings in different sittings, you'll always have
this file to go back to.

FOR NETSCAPE USERS:

Step 4.?Within the Netscape program, go to the pull-down window
entitled 'Window' select 'NetscapeNews'. Then from the pull down
menu 'Options', select 'Show all Newsgroups'. After a few moments
a list of all the newsgroups on your server will show up. Click
on any newsgroup you desire. From within this newsgroup, click on
the 'TO NEWS' button, which should be in the top left corner of
the newsgroups page. This will bring up a message box.
Step 5.?Fill in the Subject. This will be the header that
everyone sees as they scroll through the list of postings in a
particular group.
Step 6.?Highlight the entire contents of your .txt file and copy
them using the same technique as before. Go back to the newsgroup
'TO NEWS' posting you are creating and paste the letter into the
body of your posting.
Step 7.?Hit the 'Send' Button in the upper left corner. You're
done with your first one! Congratulations...

INTERNET EXPLORER USERS:

Step 4.?Go to newsgroups and select 'Post an Article'.
Step 5.?Fill in the subject.
Step 6.?Same as #6 above
Step 7.?Hit the 'Post' button.

THAT'S IT! All you have to do is jump to different newsgroupes and post
away, after you get the hang of it, it will take about 30 seconds for
each newsgroup!
**REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL
MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200**
That's it! You will begin reciving money from around the world within
day's! You may eventually wany to rent a P.O.Box due to the large amount
of mail you receive. If you wish to stay anonymous, you can invent a
name to use, as long as the postman will deliver it. **JUST MAKE SURE
ALL THE ADDRESSES ARE CORRECT.**
Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a very low example).
So then I made $5.00 with my name at #6 on the letter. Now, each of the
5 persons who just sent me $1.00 make the MINIMUM 200 postings, each
with my name at #5 and only 5 persons respond to each of the original 5,
that is another $25.00 for me, now those 25 each make 200 MINIMUM
postswith my name at #4 and only 5 replies each, I will bring in an
additional $125.00! Now, those 125 persons turn around and post the
MINIMUM 200 with my name at #3 and only receive 5 replies each, I will

make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With a original investment of only $6.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:
at #6 $15.00
at #5 $225.00
at #4 $3,375.00
at #3 $50,625.00
at #2 $759,375.00
at #1 $11,390,625.00
When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everday and are willing to give it a try? Estimates are at 20,000
to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest.
Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!
GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH.
**BY THE WAY, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 6 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.
Please remember to declare your extra income. Thanks once again...

Awww. That's the problem with escalating and inflated boat
prices. Until you read what some folks were selling SX115
sets for, you probably were very satisfied with your trades and the
deals you made. Hopefully, the other parties were equally
satisfied. Personally, I think bartering radios for other radios
is the purest form of the hobby.

3125. FS Teletype manual and parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-13 00:00:00 UTC
From: nospam@worldnet.att.net
Message-ID: <3441a884.2827489@netnews.worldnet.att.net>
Source record: 115284

I was cleaning out the garage and came upon a Model 15 manual. This manual is in good condition and is a NAVSHIPS 91128 issued April, 1948.
There are 3 gray bound manuals in the binder, with the Teletype logo on the front of each manual. The three manuals included are entitled;

Description Type Bar Page Printer Model 15
Bulletin No. 144, Issue 2, September, 1944

Parts Type Bar Page Printer Model 15
Bulletin No. 1094, Issue 2, May, 1943

Adjustments Type Bar Page Printer Model 15
Bulletin No. 138, Issue 5, October, 1944

The manual also contains both schematic and wiring diagrams of the machine. I used this manual many years ago when I upgraded my RTTY station from a model 12 (Yeah I wish I still had it) to a model 15 and 19.

Since I have no idea what the manual is worth, I will sell it for best offer including book rate postage from 89506, Reno, Nv.

I also have 1 orginal Model 15/19 paper crank, and two Model 28 type boxes. If your interested make me an offer.

I have the boards assembled for what I remember as the ST-5/6 T.U., that was designed by Irv Hoff, (I think) but I never got around to connecting it up.
Thanks,
73 de Buzz, KD7BZ, Reno, Nv

I have a 100% disassembled Dentron Cliperton-L amp minus the tubes. It is about 95% complete (parts wise) including the original filter cap board which needs work. Includes the main power xmfr, plate and filament chokes, plate tuning and loading caps, tank circuit L network, the tank door knobs, band switch, front panel meter, the entire chassis, tube sockets, etc. Does not have the output T/R relay and the ALC circuitry.

This was going to be a rebuild/upgrade project but I have since changed my mind.

Price is $150.00 for everything minus UPS charges from San Diego. A replacement pwr xmfr form Peter Dahl Co. is going for $185.00 minus shipping. My zip is 92139. Buyer pays shipping.

3135. Help needed to complete design of DFD3

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-13 00:00:00 UTC
From: neil <neil@aade.com>
Message-ID: <34425257.3797@aade.com>
Source record: 115294

I need a little help to complete the design of DFD3.

Digital Frequency Display 3 is designed for the type
of radio consisting of a bandswitched crystal (or PLL)
controlled converter in front of a tunable IF. This is
most of the rigs from the 60's 70's and 80's. Examples
are FT-101, TS-520, all Collins rigs, most Heathkit SB
series rigs etc.

It measures the VFO and adds an offset stored in EEPROM
for each band. While it is manually programmable it
also has a unique feature in that it will auto-program
itself for many different radios.

What I need is the data for the auto-programming. I have
this data for the following:
FT-101
TS-520
SB-301
Collins 74A-1, 75A-2 and 3, 75A-4, R390/A, 52S-1, R-388
75S-3
FRG-7

If you have a rig that fits this description what I need is:
VFO tuning range (ie 1.955 - 2.955MHz)
Number of bands the rig has. (ie: 6)
for each band:
1)lower band limit (ie: 3.2MHz)
2)upper band limit (ie: 4.2MHz)
3)does RF increase as VFO increases (tunes forward) or
does RF increase as VFO decreases (tunes backward)
(you should be able to tell from the dial on the rig)
4)In some rare cases the VFO may be doubled to double
the band width. In this case is the VFO signal available
before or after the doubler? (the 75A-x series for example)

If you would like to help e-mail the data via link below.

Possibly because was designed for low power mobile AM and CW use. Mobile rigs did not last to long due to vibration and sun damage.

Also often the little chain that connected the bandswitch turret often broke on the transmitter.

80M AM is still being used as well as CW. 20M AM evening net has already restarted and it's a matter of time before 10M AM starts kicking again...

Wouldn't this equipment look great inside an '62 Impala or T-Bird with a 10M whip?

(A TS-50s inside a Toyota is just not the same !!! hi)

3150. TV-7D/U hints and kinks?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-13 00:00:00 UTC
From: mjsilva@ix.netcom.com
Message-ID: <61u4vn$7il@dfw-ixnews3.ix.netcom.com>
Source record: 115309

Hi all,

I just picked up a nice TV-7D/U (my first) and I have a few questions for those in the know:

-Does the meter reading translate into an actual mu figure?

-How far below a "good" tube are the minimum readings given in the manual? I've tested a few tubes and they all seem to test about 50% higher than the listed figures.

-I've got a reprint of TB 11-6625-274-12/1, but I see that AES has another manual that covers calibration, etc. Does this manual also have a schematic? Does a calibration/check take any exotic tools or techniques?

-Any other useful info? How about settings for post-1962 tubes?

Thanks for any info!

73,
Mike, KK6GM

I have a fully restored and operational (on 160M) Collins 20V-2 1KW broadcast transmitter for the right person. Runs on single phase 220V and uses a pair of 4-400's modulated by a pair of 4-400's. Easy 1 KW out, 24 hours per day, 7 days a week. Is on the air now on 1.885 and has been set so the low tap give 350 watts carrier out for legal operation. Will also include the audio chain/processor.

I have perhaps 200 hours in the restoration and it looks like it was just uncrated.

At 1,300 lbs, 6.5' tall, 32" wide and 30" deep, this won't easily go in your upstairs hamshack.

Its a wonderful, reliable transmitter for the right person who wants to put out a commanding signal on 160 (or wherever).

E-Mails from serious buyers only, please.

3153. Really ancient lightbulbs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-13 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEI09zz.J4C@netcom.com>
Source record: 115312

It's not exactly radio related, but I picked up at the last local swapmeet a box of about a dozen really ancient lightbulbs. Several have the evacuation point at the top of the bulb (rather than in the base), and have very fine mono-line (not coiled) filaments. Of the oldest ones, a couple are open filament, one has it's filament partially off it's supports but it seems the filament is still intact, and a couple of them appear to have their filaments entirely intact. Of these, they all have a standard screw-in base. They were just in a plain cardboard box, so they were rattling around touching eachother. I wrapped them in my sweater before taking them home, so at least there was no further damage.

In addition, There are several oddly shaped or oddly based ones that might have been used as resistors rather than illumination sources. There are a couple of strange bases there (not sure how to describe). About a half dozen of them are tubular (rather than bulb-shaped) and those do seem to be some kind of ballast resistor.

There were a few more modern bulbs (coiled filament but still pretty old looking).

Could anyone suggest references where I could learn more about these - particularly how to fix an era or date of usage/manufacture based on the construction? Any suggestions for proper care, display, etc.?

Thanx,

73 Dave WB0GAZ dgf@netcom.com

I have 4 new 4CX300A's for sale. These tubes are packaged for
military use and have a rubber cover with leads attached to the
breech block base. The cover and leads can easily be removed
if necessary. I'm asking $50 each OBO + postage or UPS shipping.

I also have 4 other 4CX300A's which may or may not have been
used. They have some staining on the chimneys which may
have been caused by the old black foam packaging they were in. I'm not
sure. These are from the same batch as the new ones and three of them
are in original boxes. I would be happy to make a good package deal
for someone if they were interested in these. I'm asking $80 OBO for
all 4 + shipping.

I still have available a National NC303 RCVR with 2mtr VHF Adapter - non matching speaker and manual.
Case has few scratches etc - needs new dial cord. Unit was working when put in storage some 5 yrs ago.
There has been some interest in this unit, however due to system changes here I lost the addresses of those who inquired earlier. Price is $125 US+ shipping (depending on where you are located this could be almost another $100)

Also available Heath SB10 SSB Adapter clean w/manual - again was working when placed in storage -
Price $75 open to offers plus shipping

Hi Dave and all, I'm a bulb collector whose heart races at those first words below. This is sketchy information but I can say a couple of things and ask some questions.

On Mon, 13 Oct 1997, David Feldman wrote:

These are carbon-filament bulbs if the filament goes up and comes right back down, or goes up, completes a full loop (or more than one, and possibly one of more loops are anchored at the bottom to another wire or wire emerging from the glass stem), and comes back down. On the other hand, if the glass stem inside is tall and there are little wire supports radiating like spokes both at the top and the bottom of the stem and the filament is wound up and down alternately between them, then it is a metal (probably tungsten) filament.

The tips on top (where the air was evacuated from) started disappearing around 1921 when machinery nad techniques were developed to evacuate through the stem. Tungsten-filament bulbs began to be marketed about 1907 in the US (a little earlier in Europe), but didn't really take off until about 1911 when GE perfected the process of drawing the tungsten into a thin wire. For several years both carbon and tungsten bulbs were made, and the former were pretty much driven from the market by 1925 or so but still produced for several years (in fact they are still being made and look great in old lamps). Anyway, if your bulbs have carbon filaments and these are attached to the lead-in wires with black blobs, and the insulator around the center contact is black or blue glass, what you've got are common, garden-variety carbon bulbs. If tungsten, and the radial support wires are really thin with little v-shaped hooks on the end that the filament rests in, those are common too. Slightly less common are the ones with heavy wire supports (almost as thick as paper clip wire).

> In addition, There are several oddly shaped or oddly based ones that
> might have been used as resistors rather than illumination sources.
> There are a couple of strange bases there (not sure how to describe).
> About a half dozen of them are tubular (rather than bulb-shaped) and

Probably these are ballasts, especially if the filament goes up and down several times almost the whole length of the bulb, separated perhaps by passing through holes in mica disks. But I'd like to know more about the unusual bases. Between the early 1880s and the 19teens there were at least 14 different base/socket types on the market, but they eventually lost out to the Edison screw base we use today. (An example of Thomas Edison's business acumen: He gave away adapters that would allow his lamps to be used in competitors' sockets. Problem was, they were usually made so that once put in, they wouldn't come back out, so you were stuck having to continue to Use his bulbs).

Please describe the bases more fully (or send me a jpeg or a snail mail picture). In fact pictures of all the bulbs would be fascinating, and I might be able to tell more.

> Could anyone suggest references where I could learn more about these -
> particularly how to fix an era or date of usage/manufacture based on the
> construction? Any suggestions for proper care, display, etc.?

I wish there were some books for us poor bulb collectors! Learning how construction details changed over time is very hard, we have to cull nuggets of information out of catalogs, ads, and other collectors (and unfortunately many passionate bulb collectors are loner types). There were literally hundreds of manufacturers, making virtually numberless variations of bulbs for all sorts of uses. Cheap bulbs also flooded in from Japan in the teens, and there were European imports too. It isn't worth trying to place the common kinds, but unusual ones are a different story.

As far as cautions and care, I recommend you not try to light them. If vacuum bulbs, who knows whether a little air might not have seeped in over the last 80 or more years. Bulbs were also made for many different voltages, including 32 for farm service and 50-60 for streetcars. Most collectors are satisfied if the bulb is visually intact. You can also check for continuity with an ohmmeter.

If there are no paper labels or printing on the glass you can safely clean them with Windex, 409 etc. and then wipe with a damp towel to get the cleaner off. If they are marked be careful around the marks, although usually these are more durable than on radio tubes.

If you are interested in learning more I can recommend a couple of books (most of the books there are are about Edison/GE). Welcome to the fascinating and frustrating world o' bulbs!

Chris

PS. My collecting instinct requires me to state that I'm always looking to add to my collection, whether by purchase or trade (fresh out of boatanchors, but I know where there might still be a Heath DX-100).

If you have a TV-7 in anything other than perfect condition, I would recommend having Dan Nelson go through it and calibrate. He is VERY reasonable, and does GREAT work. He cleaned up, calibrated my beat up TV-7, including a tube and a power cord for something like $40.

Dan is at (602) 243-7421 I think his email is djn@goodnet.com

ARC, R-34a receiver 108 to 126.9 mhz. B-13a-1 converter, includes shockmount. good physical condition, appears to have original solid state DC TO DC converter where you might find the dynamotor. no plugs or conectors and i have no idea if this thing works, but as i said it looks very nice with no apparent mods. because i know nothing about this radio i dont have a clue as to what it's worth! looking for offers for sale or trade. things i would be interested in are, other radios, parts, tubes, or what have you!!! if this thing trips your trigger get back to me via e-mail.

thanks & 73......Ax9909@AOL.COM

From: k3bf@aol.com (K3BF)
Date: Mon, Oct 13, 1997 22:26 EDT
Message-id: <19971014022600.WAA11422@ladder02.news.aol.com>

CCA very good to excellent RE KWM2 with original manual. Only cabinet flaws are very small paint chips on border of finger hole of top lid and borders of both left and right mobile mount holes. Front panel is perfect. Chassis clean enough to eat off.
Radio has some tobacco odor but no discoloration whatsoever.

Comes with unmodified very clean 516F2 power supply and CCA excellent WE cabinet.

Will ship CONUS very carefully packed and double boxed for $1150.

This radio will not disappoint.

Have near complete set of GE Progress Line (the 100% tube-kind from the 1960's) DataFiles for sale. Folders include - receivers, transmitters, controls, accessories, cabinets; set covers low, VHF and UHF bands. Will sell as set for $100 or $10 each plus UPS. All in good condition and complete.

Also have a few of the green books - system configurations, some up to an inch thick at $10 each and lower!

E-mail for phone information or verification of specific sets.

Also have low-low prog line strip set for 26-34 MHz if you want to make a 10M repeater - excellent condition with tubes intact.

Thanks for reading.

FYI: This equipment is vintage 50's VOR navigation system, part of the ARC Corp. "Type 12" equipment suite. The B13 is the VOR/LOC converter, which drives an IN-10 VOR/LOC\ILS indicator. This was the next to last equipment suite mfg by ARC before Cessna bought them out and destroyed the company. Plugs for this equipment are proprietary to ARC. "The last of the good stuff"!

3201. FS: adjustable 250V DC supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-14 00:00:00 UTC
From: markust@lx.net
Message-ID: <876874236.3070@dejanews.com>
Source record: 115357

I have an adjustable DC power supply for sale. It has two 6.3 volt filament terminals as well as separate terminals for 108V DC+, 0-250V DC+, and 0-150V DC-. The DC+ and DC- are independantly adjustable and there is a 0-500V panel meter. The supply works, however I do not know the current rating. The unit overall is in good shape, no major dents, rust etc, but could use some paint. I am asking $60 plus shipping. Thanks, Markus.

From: Rick Lutzinger <rjlutz@home.com>
Message-ID: <34443554.59EC@home.com>
Source record: 115359

I have a real nice Barker & Williamson model 5100 transmitter for sale or trade. This unit works fine but I need more room in the shack. I will sell it for $200 or trade for Drake, Swan, Atlas, Yaesu or whatever you think might be worth discussing. I am open to suggestions. Tnis transmitter can be seen on my webpage listed in my sig file below.

Sorry, but I will not ship this BA anywhere, so either you pick it up or we meet somewhere in the middle. I also have the manual.

Thanks,
Rick

3204. Hallicrafters S-106 receiver???

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-14 00:00:00 UTC
From: k5dh@ti.com
Message-ID: <620jdn$lkk@sf18.dseg.ti.com>
Source record: 115360

My first shortwave receiver when I was a young lad was an old Hallicrafters set, and I believe the model number was S-106. I was about 10 years old, and an elderly neighbor gave it to me. She'd had the set sitting in a hall closet for many years (it had been her son's when he was young, and he was about 30 at the time). It covered .5 to 30 MHz in four bands, with a big slide-rule dial and separate slide-rule bandspread scale from 0 - 100 along the bottom of the main dial. I don't recall ever seeing one of these for sale, or even hearing anyone talk about them, so maybe I have the model number wrong. Do I have the model number right? Anyone have one of these for sale in decent cosmetic condition? Nostalgia attack!

Source record: 115223

Hi everyone...

I recently acquired a virgin Heathkit in an unopened box direct from Benton Harbor. It is an IG-42 Precision laboratory RF generator in kit form. (kit cost was $64.95 in ? year) My original intent was to perhaps build it but cannot quite bring myself to open the box. As I really have no practical use for the unit once built, I have decided to put it out to bid to those who may have an interest as a Heathkit collector or in actually assembling the unit. Bid rules are as follows:

Minimum bid is $50 (my cost)

Total cost to winning bidder will be bid price plus shipping cost and insurance (20lbs from zip 04106)

The Heathkit will be sold to the highest bidder. Bids will close at 11PM Eastern on Sunday, October 19th at which time I will notify all who submitted a bid of the winning bidder..

Thanks for the bandwidth...

Mr Webber N1PGW Sends Gear

Thanks to all who helped in getting my radio and speaker
from Harry A. Webber (N1PGW) of Dover Foxcroft, ME.

From email and phone calls from several people, it seems
that everyone who has dealt with Harry has had a similar
experience.

In my case, a Certified Letter to the Pisquatiquis County
Attorney did the trick in getting the radio shipped (he is
a county official).

Others, like me, have gotten their equipment from Harry
after being insistent and sending official letters to the
county officials.

In my case, the radio (FT-101ZD) does work and I'm pleased,
but the "matching" speaker is not the SP-901 (it is an SP-101).
I will live with the speaker misunderstanding.

It may be best to avoid dealing with Harry unless you are
very patient and insistent. Several people have had like
experiences and were quite helpful in providing addresses,
phone numbers, and the "technique" for getting the equipment
on the way.

It is over and I DID get my gear, but it WAS quite frustrating.

Just thought everyone should know that Mr. Webber DID send the
radio (finally).

replacement parts listing.

The unit is the same size and shape as a model 43, and has
2 additional controls near the bottom of the front under the
element cavity; one is for battery test, and the other is for
peak reading, which allows use of the meter as an average power
reading instrument also. Pain color is light gray, ID plate on
top of unit with model and serial #, spare element storage holes
on both sides, fuse holder and AC input, N connections input
and output. Rubber feet on both bottom and back, 110/220 input
selector switch on back.

Shows definite sign of use. Has paint chips on front, and one side
has paint sanded away on small area for an inventory control number
to be engraved, which is still visable.

$ 250.00, with the manual and charging cable for charging
internal battery from AC.

------ OR -----------

Will consider trades. Looking for good EPROM programmer, 2006
scanner, tube tester, R-417 receiver, Basic Stamp development system,
other test equipment, VHF/UHF gear or items related to computer
assisted monitoring of equal value.

*** !!!! WE ARE BACK IN THE GARAGE !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
October 19th, 1997
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Seperate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

3242. MIG 15 ADF question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-16 00:00:00 UTC
From: boeing377@aol.com
Message-ID: <19971016174101.NAA26705@ladder02.news.aol.com>
Source record: 115248

I saw a Russian ADF control head in a Mig 15 cockpit that looked remarkably similar to the type used by the USAF with the 1940's vintage (vacuum tube) BC 433 Radio Compass ADF receiver (SCR 269). Did the Soviets copy US avionics? Is the receiver and loop antenna also a copy or just the control head?

I would suspect that what you saw was a copy of avionic equipment that was
supplied to Russia under the lend lease program. I believe we were
supplying both air and ground navigation equipment under the program. It
would be very easy to create carbon copies of that equipment, as Russia
did with so many things during that timne period. You skip the
design/engineering phases and just gear up for componet manufacture.

Thanks for the reply to my test message. I only have one low voltage
ripple inverter left and I would prefer to hang onto it for sentimental
reasons. I don't need a medium raster because I still have my Commodore
64. I'm hanging onto it also for ditto reason. Keep checking the garage
sale want ads. That institution is still thriving! 73. Arden

I'm looking for a 2m and 440 base and mobile... (also want compatible repeater and auto patch). Want to trade for my HF bundle? Here's what I have (sold/traded as bundle only)

-Kenwood HF SSB Transceiver (TS-180S) with 160, 80, 40, 20, 15, and 10m bands. WWV (10.0 MHz) SSB/CW/FSK, desktop mic (Kenwood MC-50), speaker (Kenwood SP 180), and power supply (Kenwood PS-30). Has D.F.C. memory unit upgrade.
-DenTron MT-3000A Antennae Tuner and DenTron linear amplifier MLA-2500B.
-Computer Patch Interface by (Advanced Elec Apps, Inc model CP-1)
-Hybrid Phone Patch (Heathkit HD-15)
-Beam antennae rotator (Alliance Dual Speed Control)
-Vibroplex key.
-Microlog Corp's ACT-1 TTY.

Every component works perfectly.

Body handling: HTML body converted to readable text

For Sale:
Hallicrafter SX-99 receiver and R-46B speaker. Both are excellent cosmetically and work well mechanically. I have only owned them for a couple of days so I can only attest to the fact that I was able to hear quite a bit with 2 feet of wire connected to an aluminum window frame. With a real antenna I imagine the receiver would be pretty hot. The contacts and band switch could probably stand some cleaning.

For the collectors: The labels are still on the inside of the cabinets. Dials on the SX-99 are metal. No dents or dings on cabinets.

$150 plus shipping for the pair.

I have an old Hallicrafters S-40B General Coverage
Receiver that has been in th family for many years.
I think it still works although I haven't tried it
lately.

Is there any kind of a market for an old beast
such as that? Anyone collect the things (no disrespect
intended - the radio has a great history).

Thanks,

Jim

3268. Re: Drake NB-7 Noise Blanker (Retraction)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-17 00:00:00 UTC
From: W2OKF <szachara@gulftel.com>
Message-ID: <01bcdb13$fdea8d00$0f3aded0@WalterS.Szachara>
Source record: 115177

I find that I have been a victim of lack of knowledge in Drake equipment. I had received what was portrayed to me, a Drake NB-7 Noise Blanker. After consultation with a representative of the R L Drake Company, this morning, I find that all I have is an NB-7 box, an NB-7 original data sheet and a "dummy" NB board for the TR-7. A bit sheepishly, I withdraw the below post and now ask, "Is there any interest in a dummy Noise Blanker board for the TR-7 and the original box and documentation for the NB-7 Noise Blanker.

I apologize to any and all who responded for any inconvenience and unfulfilled expectations that my "uninformed" post may have caused...

Thanks for your patience,

73,

Walt, W2OKF

3272. National HRO-50/60 Questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-17 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <3447B807.D70@ford.com>
Source record: 115181

Regarding the these two particular models:

-- how would one resolve the scale on the PW dial with the slide rule dial, in the sense of being able to read the frequency to higher resolution...? I could have sworn that, from the last time I saw one, which was several years ago, the HRO-500 would read hundreds of KHz on the PW dial, and the operator would append that to the MHz reading of the PLL circuit. On the earlier HROs , is it pretty much a logging scale issue, or does any given number of graduations on the PW dial correspond with a change in KHz? (recognizing that the slide rule scale is a moving target, with different ranges for different coil sets, and general coverage/bandspread distinction on some coil sets to boot).

-- if adjustments to a coil set can only be accessible if the coil set is out of the radio and not plugged in, how would one align the coil set? Are you literally faced with the iterations of measure, switch off B+, pull coil set, tweak, insert coil set, switch on B+, measure, etc., repeat ad infinitum, in order to get the job done, or is there an easier way...?

C.K.

> resolution...?

Except for the HRO-500, the 0-500 scale on the PW dial is strictly a logging or "reference" scale. The slide rule dial on these two radios was a late innovation in the long series of radios with PW dials. Earlier HRO's had an interpolation graph or table which cross ref'd dial setting to frequency. But there is no nice linear realationship such as you are suggesting.

> -- if adjustments to a coil set can only be accessible if the coil set
> is out of the radio and not plugged in, how would one align the coil
> set?

You CAN adjust the caps in the coil sets with the set in the radio. But you can't get to the inductor, which is tuned by physically moving a loop of wire inside the can. If the inductor needs adjusting, without having a special external alignment jig (shich is what National used) you must go through the rather laborious trial and error process you described. Truth is, unless someone has fiddled with the setting, you ought to be able to get by most of the time adjusting only the caps anyway.

Dear reader,

De Radiowereld again has updated her website!
As you can see there's a lot to find there about radio / tv / media,
and all dutch radiostations.
New on this site is the "last media news".
Also new is that the amount of links is doubled!
In a simple way a CD can be won, by placing a button
on your own web site. We would appreciate it if you placed
a button of our site on your web site.
Therefore we would like to invite you to take a look
at our web site. Please inform us how you think
about our site!
Yours sincerely
De radiowereld.
http://www.radiowereld.nl

Geachte lezer:
De Radiowereld heeft haar site wederom opnieuw vernieuwd.
Zoals u al misschien weet kunt u op de Radiowereld alles vinden op het
gebied van radio / tv / media, nieuw is het laatste media nieuws.
Nieuw is het aantal links dat nu is verdubbelt.
Tevens kunt u kans maken op een GRATIS CD op een simpele manier.
Bij deze nodigen we u uit om eens een kijkje te nemen, veel plezier.
Het adres, http://www.radiowereld.nl

Met vriendelijke groet :-) martin---De Radio Wereld----
E-MAIL : webmaster@radiowereld.nl

De RADIOWERELD
Hier vind u alles over het medium radio
Nu geheel in nieuwe stijl, snel, en nog meer...
Tevens maak je nu kans op een GRATIS CD
P.S. staat Uw link er nog niet bij, MAIL ons.

I am in need of the VFO Tuning Capacitor for the Swan 500. It is a 5-12
variable, and is the same used in the later Swan 500C and CX, and in
addition, it is used in the Swan 406 and Swan 410 Remote VFOs.
If anyone has a capacitor or a "junker" Swan 500 series xcvr or Remote
VFO available to sell, I will buy it if I can afford it.

If you can help, please let me know your price, delivered to Northern
Virginia.

Thanks for your help,

Samuel Yates, AB4N

Material condx is ~ an 8 on a 10 scale. The 75A1 needs to be cleaned up, painted, maybe re-tubed and aligned. Both units are very restoreable to a 10++. I have the original manual which is in pristine condx. The tuning dials are excellent and not tinted yellow.

Recent acquisition of a 75S2 in need of work has demanded all of my "free" time hence the unloading of this "project".

I prefer not to sell but to trade for an HF amp. I am very flexible, just no sweep tube amps please. An amp with or w/o tubes??????? What do you have???

3284. FS: Ameco PT tunable preamp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-17 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <6299f7oqo1@juliana.sprynet.com>
Source record: 115193

The Ameco Model PT preamp covers 1.8 to 54 MHz using a frame grid 6EH7 tube for a noise figure of 1.5 to 3.5 db and an adjustable gain of up to 20 db. Input tuning covers four ranges with a peaking control.

AC outlets are provided on the rear for the transceiver and an auxiliary receiver, and switching within the preamp is specifically designed to protect the auxiliary receiver. An isolation network is designed to feed the transceiver and the receiver simultaneously.

Not mint, but looks good and works fine. Looking around I realized I just don't need five preamps...

Preamp plus manual, $50 plus shipping if required from Nashua, NH 03060.

tnx es 73,
-Pete

>remaining TV repair shops and make an offer to get their 6hf5 tubes!
>Or you could peruse the YELLOW SHEETS or QST to find a tube guy or
>maybe even RF PARTS Co. will still sell some 6hf5's in matched pairs.

Great to hear other guys using the old swans!
I put a pot in the screen voltage supply and I am able to run the rig
with it only puting out 5 watts or full power, the pot is a 5 meg ohm
if I recall and when set for low power you can never over heat your
finals and burn them out,even with no ant connected!
6hf5 tubes are hard to get, so are all most any tube that will work.
Good luck finding them!

Hi Lynn;

It really depends on what part you are looking for. But, here are a few places that have some of the inventory and one that has some older RF parts and IC's.

Specturm Electronics, Inc.
1226 Bridge Street NW
Grand Rapids, MI 49504
(616) 742-0613 FAX 616-742-0614

They have a lot of small parts, but you must have the Heathkit part number, they cannot cross-reference. You must call confirm availability and send them the money, no credit cards. Once they receive the money they will forward the part, takes about 10 days.
They have no WEB site.

Also Multi-Volti Devices. They have transformers too. There e-mail address is multi-volti@softhouse.com. I have never purchased anything from him before, but he has responded promptly to my request. They have a web site, but I do not have the address.

Also you can try RF Parts Company, 1-800-737-2787. They have some of the older RF parts and IC's that were utilized in the Heathkits, but it is not from the Heathkit parts inventory.

If none of them have the part list a request for the part here in this forum, someone just may have a parts rig or the part.

Good luck;
Bob W4RLC

There was a discusson a while back on switchboxes used with
the BC-375 and other airborn WWII gear. I recently came across
a small stash of unused switch/jack boxes if anyone needs any.

Here is what I have -- All NIB 42-44 vintage.

4 each BC-366 Switch/jack box , volume control, 5 position switch
(comp-liaison-command-inter-call) Fair wants $10 each + shipping.
I want (no snickering) $10 shipped anywhere in the world.

1 BC-366 NIB with volume pot missing - free with first order to ask for it.

5 each BC-345 switch box 3 position RANGE-VOICE-BOTH switch.
(no "beam filter" just the box.) $5 shipped.

No offer will be refused, interesting trades welcome.

Source record: 115118

Hi gang,

Over the years I have collected some duplicate issues of QST's and would like to offer them to this group for just the postage to mail them from St.Louis. Here's a listing of what I have available:

1)September through December, 1953
2)June, 1955
3)December, 1955
4)June through December, 1957
5)July, August and December, 1958

If you are needing any of these issues, they are yours for the asking if you will be kind enough to pay the postage. Drop me a line via e-mail or call me at 314-579-0671 (h) or 314-232-5273 (w).

I hope this will help some of you complete your collections.

73,
Dave, K2DP, St.Louis

PW and HRO decode.

Hi,

I take it the acronym PW refers to the windowed dial used on most HRO receivers but what does it actually stand for. And except for the HRO's most National radios model numbers were in the NC-xxx series, which makes sense, but I've never been able to figure out HRO. Does anyone know why they used that particular group of letters?

TIA, 73 de Joe, G3LLV

3316. WHAT'S THIS FOR? - DYNALOGIC PS-900A?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-19 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <62dqsi$67f$7@csu-b.csuohio.edu>
Source record: 115125

WHAT'S THIS PIECE OF TEST EQUIPMENT FOR?

I have no manual and am not knowledgable about electronics.

It's a:

- Dynalogic, Inc. PS-900A

Has with it:

1. A Beckman Probe called a CIRCUIT MATE #LP10A

Controls on Probe are:
- Has High/Low LED arrow lights
- Has TLL/CMOS slide switch
- Has Pulse LED
- Has MEM/PULSE slide switch

2. Also has 12 key touch pad that connects somehow with main unit using a ribbon cable.

3. A fishing tackle type box of little jumpers to be used on the circuit board of the unit at random it appears

4. A box of chips that look like old DRam chips of various sizes.

I'd appreciate it if anyone could tell me what this does and if it's still a viable piece of equipment. I want to learn basic electronics when I have the time.

Is this thing worth anything?

Thanks.
Lance

From: radiotr@users.jaxnet.com
Message-ID: <62gce4$3c1@news.southeast.net>
Source record: 115137

Just uncovered a pair of Hallicrafters HC-400 UHF Handhelds radios during a shop cleanout. I thought these had been gone for years ;)

Here's a little info about the pair:
1 is nice, needs a good cleaning. It recives on 460.400 and transmits on 465.400. Also has talkaround 460.400 with a PL Tone of 103.5

The other unit will not power up and is missing Anteena and Battery cover Its Crystaled on 453.525 and TX on 458.525...Its complete, minus the above items...A Parts unit...

I hooked the Clean unit up on a 12v Power supply and checked it on a signal generator..Seems to work OK. Would be nice for Working Display?

Here's the deal: 1st $50.00 gets them both, That does include Return UPS shipping. I do require Prepayment: Personal Check or Postal Money Order..

1st reply wanting my shipping info gets them, I will hold for 7 days.

Reply via E-mail to: radiotr@jaxnet.com

Source record: 115146

This is a Drake BCB + Shortwave receiver. Covers longwave, all major shortwave bands and most of BCB. Front end is tubes, VFO and audio is solid state. Typical Drake 4 series styling. Very easy to tune and use.

In very good condition outside (minor marks on the black case), new knobs (from Drake), clean front panel. Inside, the copper chassis has usual light crud on it, not visable with case on. Recently aligned, several new tubes installed. Speaker is MS4, in very good condition, with new audio cord.

Radio not getting used, looking for a good home. Includes copy of manual.

$195 + UPS

Consider trades for tube audio

Thanks

Large non-inductive 50 Ohm resistor for large dummy load.

Carborundum 275 watt continuous,
50 Ohm 5%,
non-inductive

12" long, aluminized ends, 1" diameter.

Brand new, never used or placed in-circuit.
Could be used for 1000+ watt air cooled, or,
2000+ watt oil-filled dummy-loads.

A MUST for QRO operators!

$30 dollars + $5 for shipping.

From: badger@telalink.net
Message-ID: <62j6ho$1ho@apple.telalink.net>
Source record: 115067
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Recently found a National SW-54 recever in decent shape.
I would like to find a schematic and alignment info on it.
The basic design is AA5, but the trimmers for each band
seem to be haphazardly installed (apparently on purpose,
the cutouts on the carboard bottom align with the trimmers)
Again, I could probably puzzle out which trimmer goes with
which band, but if anyone has actual info, I would greatly
appreciate it.

Please reply via email - my news service can be sporatic.

Thanks

From: Michael <msell@fast-trak.com>
Message-ID: <344D7EE0.6E48@fast-trak.com>
Source record: 115074

Wants: Filter condensers, electrolytic, to go in the 4A. These are the nut base style, size is 4 3/8" tall and 1 3/8" in diameter. Value, 8mf at 600 pv. The connection to the cap is a threaded post and nut on the bottom. The most important thing is the size, mounting, the connection type. Most dry electrolytics of this vintage, (1935) will not be good. I can always have them rebuilt. I am looking to duplicate the exact look of this transmitter.

Also looking for a Collins 2A antenna matching unit or any literature, pictures, etc.

Thanks and 73,

Michael

3363. Info (output, purpose) on Heathkit HP-24 power supply?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-21 00:00:00 UTC
From: Nicholas R Kennedy <nkenned@entergy.com>
Message-ID: <344C9720.7CA3@entergy.com>
Source record: 115154

Does anyone know the output rating of the Heathkit HP-24 power supply
and what rig(s) it was intended to match?

It looks just like the HP-23 I once used with an HW-101, but the HV
output is via a separate connector and it doesn't have a screen supply.
(An octal connector is marked for 12V filament, -120V bias, and ALC
level). In terms of heft, it could be for a 200 watt class rig, or
maybe something bigger.

Nick, WA5BDU

I just spent 20 minutes writing all the details for this post and lost it by hitting the wrong key. The Collins gear needs work and TLC. About a 7 to an 8. the Knwd 930SAT works perfect and was recently aligned by a local engineer. S/N is ~ 2 mil.

I want to trade the 75A1, 270G-1, and TS-930SAT for a TS-850SAT.

Lane
Kilo Mike Three Gulf

e-mail for the details

There is a catch. The 75A1 is a fixer upper. On a scale of 1 to 10 is rates about a 7 to an 8. The audio gain pot does function but also free spins. There is no output from the rcvr other than white noise. It needs cleaned up. The pots are "noisey" as well as the switches. The tuning dials and scales are very very nice. Not tinted yellow but clear. The dial cord works fine. There is minor corrosion on the inside of the rcvr but the chassis is not rusted (looks like really old dust and dirt). No holes drilled to the top, front, or sides of either the 270G-1 spkr or to the 75A1 rcvr. I have the original manual and it is in pristine condx. The rcvr weighs 57 pounds and the spkr weighs 9 pounds minus boxes and packing. The rcvr and spkr would clean up to about a 9 w/o new paint. With new paint they would both look new.

The TS-930SAT works like new. Recently aligned by a San Diego engineer. S/N is in the 2 mil range. Gen. coverage xmit has been enabled for MARS ops. cosmetically the main tuning dial paint has rubbed off.

I would like to trade the Collins and Kenwood gear for a TS-850SAT.

Lane
Kilo Mike Three Gulf
San Diego

3370. SignalOne Mil-Spec 1030

From: BOB DUCKWORTH <bob@atl.org>
Message-ID: <344DC3BE.564E@atl.org>
Source record: 115087

If you are keen to have a KWM2, I'm keen on a 51J4 or Drake R7A

Have Nice looking KWM2ARE/waters/PM-2.
Front panle looks good.
Cabinet repainted but I would redo if keeping.
PM2 not dented but paint is badly chipped and scratched.

Want 51J-4 with CW, SSB, and AM filters in nice shape.

KWM2 is INOP at present but I suspect cleaning relays will fix.

My radio interests are receivers and vintage solid state gear
and all operations are AM or CW (KWM2 is not that good a CW rig and
forget it for AM :-) so the transceiver isn't a good fit here.

Will also swap for Drake R7A or 'A' equipped R7.

Can cart it to the Stone Mountain GA Hamfest on 1 and 2 Nov
if anyone wants to do an eyeball swap.

Otherwise, I'm in Atlanta and can swap here or via freight.

3381. Re: alumnium type for radar antenna?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-22 00:00:00 UTC
From: la8ak@online.nospam.thanks
Message-ID: <344e41f0.4360825@news.online.no>
Source record: 115090
Cross-posted to: sci.electronics.design,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

Some additional information on the the Giant was requested either via
email or via the NG:
The information below iis found from books: Deckname "W�rzburg" by
Arthur O. Bauer (PA0AOB)** - and "Directory of German Radar Equipment"
- available as copy from Werner Gierlach (DL6VW), K�ln (Cologne)
Germany

The UHF part consists of the following valves:
LG1 twin diode wavemeter
LD5 triode Local oscillator, free running
LG9 twin diode mixer, IF= 25MHz
LS 160 triode TX oscillator
S�62a Nullodes in TR-switch, one for TX and one for RX, switched on
during transmit from a voltage pulse with some quarterwave line
technique arrangement

The valve LG9 is a 20mA impulse rectifier, 500mA peak, 1500V peak
Power output 8-11kW peak, 75 valves in RX and TX.
Range: 37.5-50miles, pick-up range 60 miles with 30m asl site, 80
miles for 150m asl
Frequencies: 490, 530, 560mc/s, similar type GIANT: A, B, C
The main difference between the Giant and the small types is in the
size of the reflector.
Power source: Power lines 90-380VAC 40-60Hz, or stand-by motor
generator sets.
IFF: The aircrafts respond with a 125MHz tone modulated signal when
hit by radar.

Germans also had some 125MHz Freya Radar, and one might ask how bad
was these old radar systems. We have seen several attempts to quote
that they were not useful, while allied officers visiting Hanstholm
Denmark had a different opinion
See: Bent Baagoe Antonisen: Hanstholm-Faestningen ISBN 87-981206-1-1
this is in Danish language.

Some foreign navy still uses 226MHz(?) and black-out our TV channel 11
(and Channel 12 - used in Eastern Europe) occasionally, with a strong
second harmonic spurious signal on 432MHz

Another valuable book is:
Die deutschen Funkmessverfahren bis 1945 byt the late Fritz Trenkle,
Motorbuch Verlag, Postfach 1370, D-7000 Stuttgart, issued 1979, ISBN
3-87943-668-1
**) Verlag Historischer Technikerliteratur, D-4352 Herten

I am moving from my home in Staten Island, NY this week and must liquidate a lifetime collection of Amateur/SWL gear, scanners and hi-fi equip. List includes Hammerlund SP-600 receiver, Drake R4B, Kenwood R-1000, Hallicrafters S-180, RCA Marine direction finder (great for BCB), Universal M-7000, AEA PK-232, military Panadaptors, and more (many Bearcat scanners and tuneable VHF-UHF sets also).

Also Luxman Graphic EQ, Phillips Stereo TV, Allison speakers, Thorens turntable, Haffler amp.

Please e-mail me (with your Phone# if possible) if you are interested as gear is available by appointment only THIS WEEKEND (Oct. 25 and 26, and possibly Friday too!).

Everything MUST GO and most is in excellent cosmetic and working condition. If it is not working, make me an offer and chances are I will take it.

Looking forward to seeing you THIS WEEKEND.

Paul

Source record: 115093

Following books are being sold on behalf of a local ham to avoid the trash heap. These are all pretty good ones too.

BIG BOOKS - $10.00 each including shipping/postage in US:

Bill Orr's Radio Handbook, hardcover, 19th ed 1975 G cond.

Broadcast Engineering & Maintenance Handnook, pub 1976, 530 pages in new condition

Oldies & Big also $10.00 including the shipping as above:

Advanced Laboratory Practice in Electricity and Magnetism, McHGraw Hill - 1929 in VG cond, hard cover 319 pages neat pix and drawings

Radio Engineering, McGraw Hill - 1937, 805 pages, VG cond. Includes early TV theory and brodcast antennas.

Practical Radio Communication, McGraw Hill - 1943. 915 pages, good cond - focuses on short wave communications, DF, etc. Includes a neat chart of morse code and some large pull outs.

Radio Engineering Handbook, McGraw Hill - 1941 More of a reference book than theory - lots of tables and diagrams. Smaller hardcover, neat looking, fair condition to good 940 pages.

2 small paperbacks - oldies but goodies - $6.00 each including postage:

73 Dipole and Longwire Antennas by Ed Noll. W2FQJ. Very practical, non theory with some great ideas of many wire antennas - a great book I have one.

The Shortwave Propagtion Handbook by George Jacobs, W3ASK. Excellent DX'ers and professionals book of propagation - I have this one too.

> Radio Company of Chicago, Ill.- models 430,440 & 450a.

The Raymond S. Moore book ("Communications Receivers: The Vacuum Tube Era") lists the company and has illustrations for several models. Not ever having owned one, I can't speak to how well they may or may not have worked... but they *look* totally cool in a '30s art deco sense. Would love to have one in my collection someday... but sadly, I never see these in my travels. Probably not too many of them left these days.

Al Rooney wrote:
Folks,
Thanks for your personal replies to my Collins questions. A few
of you sent direct mail- Jon W, Bill H, Steve, Sandy...
Now I know how to get an operator's manual. This is what makes
the Internet so valuable as a resource!

B.T.W.,
I was able to remove the front panel after taking some old Allen
wrenches to my grinder, and am ready to replace the dial cord.
Only problem is that the receiver went electrically dead while
trying to corellate bandswitch vs. dial info. Thank goodness I am
better electrically than mechanically. (And I hate plumbing!) :-)
In any event, I will get it working.
Once again thanks,
Al Rooney, N2NKB Madison NJ

In article , ka0yos@aol.com says...
>Does anyone know anything about a "Breting 14" my father just bought one at an>
>auction and we nothing about it.

Ah yes, how well I remember the old Breting 14. It was a cold and rainy night in July of 43. We were surrounded by Germans. We were just about out of ammo and no more food left. The only link we had with the outside was our Breting 14 and it had 16 bulletholes in it and a Panzer 88 had run over it twice so we figured it was useless. In desperation, we grabbed it and started to give out our location over and over. Within 2 hours the 2nd batallion had broken through and rescued us, saying "you guys can thank your lucky stars you had that Breting 14 or it would have been curtains." From that day on our cry became."Into hell we've been but we walked on out cause our Breting 14 gave us the clout."

>What do these cost from distributors? They are still available.

They cost $6.32 from the manufacturer in large quantities, according
to the BOM list I have. I have no idea what a fair retail or street
price is, but $30 seems OK in one piece.

If the resistor is not ceramic or glazed, it go bad over time as oil
slowly soaks into it. All resistors are not suitable for use in
oil...beware!

A one foot long resistor is not suitable for VHF or even ten meters
unless you enclose it in a metal tube or trough, that has a
characteristic Zo close to the value of the resistor at the point
opposite the resistor. Think of the resistor as the center conductor,
and the trough as an outer shield.

IDEALLY at the feedpoint end, the Zo should be 50 ohms. At the
center, 25 ohms, and the ground end, zero ohms. Of couse you can fudge
a bit if you don't want to use it at VHF, especially since most of
these long resistors go to heck fast anyway above 100 MHz no matter
what kind of enclosure they are in.

The calatlog says the rated dissipation (steady state) is about 11
watts per cubic inch of resistor area. A six inch long and 1.62 inch
diameter resistor in air is rated at 1000 watts for two minutes, 500
watts for seven minutes, and 100 watts continuous.

Source record: 115106

I quote from "Communications Receivers, The Vacuum Tube Era," Raymond S Moore; RSM Communications,Key Largo, Fl. c/r 1993
"The Breting Radio Manufacturing Co, 1815 Venice Blvd, Los Angeles, produced six receivers from 1934-40, all designed by Ray Gudie, chief engineer(1934-38). P.J. Breting was president.(see also Patterson and Gilfillin)."
The model 14 was produced in 1936, and sold new for $99. This 5-band receiver tuned from .55-34mHz. It had a crystal filter. AF out-put is listed as a very healthy 18w.
If you have an interest in vintage receivers, I can strongly recomend the book I used as my source. It has many very good photos and manufacturer details. Wait 'til you see the Breting 40!

Most sweep tubes that I have always used in my Drake fail to last
more than 2 or three years. I converted the 6JB6's in my T4XB and
have had them in there for more than 2 years and no loss in power out.

Greetings fellow radio amateurs!

I've made a web page with amazing access to hundreds of amateurs' web pages arranged in alpha-numeric order so that you can find them easily!

See if YOUR web page is listed! Tens of thousands of web surfers have accessed these pages since I set them up and I know you will enjoy exploring them at:

http://www.mnsinc.com/bry/hamlynx/hammisc.htm

AND

http://www.mnsinc.com/bry/hamlynx.htm

73s to all radio amateurs!

Bry, G3XLQ / AF4K

A non-ham friend of mine has told me about some old "big junk" in his Grandfather's basement. Apparently, his grandfather was a ham, and a silent key in 1973..I asked my friend if he could write down the numbers of the radios if he had the chance..The next day, he informed me that the receiver was a BC-779A by Howard Radio Company.He could not tell what the transmitter was..there was not a number plate on that unit..However it was at least 4 ft. tall and "looked real heavy"..He said it had the same grey finish as the receiver. He also told me about what looked like a homebuilt transmitter with" big tubes". He mentioned an old microphone and a key attached to the large transmitter.
It was like the Boatanchor Santa Claus was finally stopping by MY house..He didn't forget me after all!
His grandfather had also been in the Navy, and had "removed" this equipment from a ship..
I have not gotten the chance to see the stuff...and whan I do I'll send an update..

(The BC-779A is listed as a Hammarlund Super Pro type in the Mil list.. Hmmm)

Then don't buy it. If you want it, but want to pay less, then make the gentleman an offer. If you don't like collecting, then don't collect. if you want to "operate" old gear and don't care how it looks, you can probably find a "works" radio that's been in a swamp for the last 40 years. Buy that one. After you've put 200 hours into restoring it, sell it for $100.00. (yeh, right!) If you want a bunch of Asian plastic and are willing to pay $2000 to get it, buy that. When was the last time you made this sort of comment to your local ham radio dealer about the price of the little breakable radio you have sitting on your table or clipped to your belt?

There's nothing quite as rude as this variety of comment related to someone else's asking price.

Regards ... Grant/NQ5T

And there is nothing worse than wading through moralistic tirades
whenever observations are posted about for-sale items. Let alone the
exhibition of brash rudeness. Why don't you keep your negative opinions
to yourselves. Apparently you don't have enough radios to work on.

Enough is enough! $500 for an NC183D is simply outrageous, even though
most the prices for FS on internet are high. This isn't Boils Antique
Auctionteria. If you want to pay $500 for an NC183D, go to your local
Antique dealer and order one. They will be sure to find one for you.
If you want to sell one for that price, they will laugh you out of the
store, just as you are laughed at here.

Any responses via e-mail, sil-vous-plait. This topic is not about radio
and doesn't belong in this newsgroup.

Go fix your radios!

3442. COLLECTOR AND MUSEUM QUALITY DEFINED

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-24 00:00:00 UTC
From: pkeogh <pkeogh@netnet.net>
Message-ID: <62qmsv$9m7$1@news.inc.net>
Source record: 115052

HI FELLA'S;

I've been reading these postings for a few months now and have been trying to decipher what is meant by "collector quality" or "museum quality" equipment.

My wife (bless her heart) often tells me that my shack "looks like a museum". She has also stated that she would like to haul certain radios of mine to the curb for "collection".

Could my spouse know something of the condition of radios more than I do?

So...be careful when you use certain words to describe your equipment. It may be better to use more esoteric adjectives such as:

MINT: Well, it only has a few scratches on the lid.

SCRATCHED: Well, just because you can see bare metal on the cabinet doesn't mean you can't touch it up.

DEEP GOUGES: What do you mean I could fill these "scratches" with molten lead???

NEEDS TLC: Hoplessly in need of all new components under the chassis. However, cabinet is "mint".

NEEDS A GOOD HOME: This radio is in "need of TLC" (see above), however, I'm asking twice what I should for it.

AS NEW: The radio is a basket case, but... I've got the orginal box for it.

NEAR-MINT: It looked great 'till I put my bifocals on!

GOOD-PERFORMER: Deep 120 Hz hum blasting from loudspeaker, however, still receives strong stations.

Yours truly....Pat, WB9GKZ

I am moving from my home in Staten Island, NY this week and must liquidate a lifetime collection of Amateur/SWL gear, scanners and hi-fi equip. List includes Hammerlund SP-600 receiver, Kenwood R-1000, Hallicrafters SX-100, Eddystone VHF-UHF Receiver, Stromberg-Carlson multiband portable, RCA Marine direction finder (great for BCB), Universal M-7000, AEA PK-232, military Panadaptors, and more (many Bearcat scanners and tuneable VHF-UHF sets also).

Please e-mail me (with your Phone# if possible) if you are interested as gear is available by appointment only THIS WEEKEND (Oct. 25 and 26,).

Everything MUST GO and most is in excellent cosmetic and working condition. If it is not working, make me an offer and chances are I will take it.

Looking forward to seeing you THIS WEEKEND.

Source record: 114966

Hi,

just received a HT-41 linear via airfreight and noticed that the finals didn't make it. Both came free of their sockets and are broken... But I am really glad that the 866s are still ok. Would have been a real mess to clean out the mercury.

So I am looking for 2 pcs. 7094 finals to bring the linear back to life.

Any offers?

Thanks for reading and 73

Hi to All,

When using several diodes in series to handle higher voltage,
how important is it to use a capacitor and resistor across
each diode? I've seen it done with and without and sometimes
with just a capacitor.

Thanks

Conrad W8MHH hoff@america.com

Use diodes of similar manufacture and type. The use of equalization resistors and capacitors across each diode has been proven to cause the failures they are supposed to prevent.

Didn't the ad state the tubes were "pulls" from used equipment;
and did not the tube pricing reflect that condition?

Did the ad say "tubes tested", or "tubes guaranteed", or even
"money back if not satisfied"? Did you ask about their policy
concerning defective tubes, or even if they had one? Generally,
unless such terms are posted with the ad, you had best assume
you are buying "AS-IS" materials. Caveat emptor. .

Someone has to be reimbursed for the time it takes to strip
and sort parts/tubes taken from used gear. I read his ad, and
my understanding was he was selling used pulls, as-is.
I personally doubt the gentleman was knowingly selling
bad tubes -- you take your chances on deals like these.
If this is the worst loss you have experienced while dealing
on the internet, consider yourself lucky.

By the way, we got your point the FIRST time you posted this.
If you feel compelled to keep this campaign going, I suggest
writing the Better Business Bureau in the state where he
conducts his business.

regards

Pete

From: mikew26532@aol.com
Message-ID: <19971025022201.WAA18898@ladder01.news.aol.com>
Source record: 115061

Old headphones for sale. I'm guessing 1930s vintage, but I'm not sure. On the back of each earpiece it reads:

Chicago Tel Supply Co.
Elkhart, Ind
DX Special
20,000 ohms

The earpieces are aluminum with screw-on bakelite ear covers. The headband is stiff wire with canvas covers. The wire is cotton insulated.

The headphones themselves are in good cosmetic condition; I have no way of testing them electrically, as the wires are in fairly bad shape. There are 2 or 3 places where the insulation is frayed, the wire is only about 2 feet long, and there is no plug. The headband wires have some light corrosion on them, but the canvas straps are in excellent condition. The bakelite earpiece covers are in perfect condition (no chips or cracks), and screw off easily. Inside, there's the usual magnet and coil arrangement with a metal diaphram. Overall, the headphones themselves are about an 8 (out of 10). The cotton-covered wire may be salvagable, but it's pretty far gone.

Offers? Thanks.

Mike, N4PDY

Support Mantenance Manual-May 80

If you have something to trade in the electronics or communications
realm give me a holler. (older shortwaves, scanners, transistor radios
etc...) But if not, I'm open to almost anything. Would really like to
trade but if you don't have anything you don't need anymore, will sell
manuals also.

Thanks,

Monty

I don't know if there is an interest in this stuff but I have the following items for trade:

1 Army TA-312 telephone with all technical manuals for operation and repair (works good and cosmetics good))

All TM's are in excellent to good condition and are as follows:

TM 11-5820-398-12
PRC-25 Operators Manual -November 1965 .

TM 11-5820-398-20P PRC-25
Repair Parts TM -November 1988

TM 11-5820-497-34P PRC-25
Direct and General Support Parts and Repair Tools List - April 1979

TM 11-5820-667-35
PRC-77 Direct, General, ,Depot Maintenance Manual - February 1968

TM 11-5820-667-12
PRC-77 Operators Manual - January 1987 (3 each)

TM 11-5830-256-13
LS-147F/FI Intercom station Operator throuugh Depot Maintenance Manual - November 1986

TM 11-5805-262-12
SB-22 Telephone Switchboard Operators Manual - June 1990

TM 11-5985-357-13
OE-254 Antenna Group Operators Manual - Feb 1991

TM 11-5965-280-15
H-189/GR Handset Operator, Parts, and Repair Manual- October 1966

TM 11-5820-461-12
AN/GRC-50(V)1 - (V) 5 and AN/GRC50A Radio Sets Operators Manual - Oct66 (2each)

TM 11-5820-540-12
AN/GRC 103(V)1-(V)4 Radio Set Operators Manual - July 1988 (4each)

TM 11-5820-540-20P
AN/GRC 103(V)1-(V)4 Radio Set Repair Parts and Special Tools List- March 89

TM-11-6625-2658-14 AN/USM-281C

I didn't see the original post, but I have a Voltohmist Jr. It uses a single "D" cell that was soldered into the circuit board. Two wires were soldered to the battery (one at each end) which extended beyond its circumference and into holes provided for it in the board. A spring clamp holds the battery to the PC board.

I removed the old battery, soldered two wires to a fresh battery (did so quickly in order not to damage the battery) and installed the new battery. I think + and - marks are printed on the PC board to help with polarity.

3523. DDD SOS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-26 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <62uej2$ti@news.Hawaii.Edu>
Source record: 115012

The DDD SOS is a prosign used by a ship or shore station in relaying a distress call for a distressed station. While perusing the old and new regulations from the 1959 ITU Geneva Radio Conference, I was suprised to see they specified that the DDD be sent as a single character:

___ ___ ___ ___ ___
DDD SOS SOS SOS DDD, i.e., the first and last are _.._.._..

Well, this is contrary to all the DDD SOS's I had ever sent while employed at NMO, and contrary to what we were taught at Coast Guard Radio School in '76; our textbooks and operating manuals were the (latest) ITU manuals.

I'm hoping someone who was employed as a maritime radio op between '59 and '76 can explain when and why ___
DDD became DDD.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-27 00:00:00 UTC
From: Roger Palmer <rpalmer@islandnet.com>
Message-ID: <01bce26e$e09878e0$29ac35c6@Roger.islandnet.com>
Source record: 114939

I recently acaquired an ADF320 that is made by Ocean Applied Research in San Diego. This is a VHF ADF intended for shipboard use. My unit was apparently taken off of an oceanographic ship a few years ago. It looks as though it was built in the 60's.

I have a copy of the manual, but no antenna. The basic unit appears to work OK, I can simulate signals at various angles on the integral CRT by using signal generators. The antenna apparently has four vertical elements in an Adcock Array, and includes an electronic module containing two mixers.

If anyone knows where I can get an antenna for this unit (working or not), please let me know!

I have come by a BRAND NEW IN THE BOX (yep!) Swan TB4H 4 element heavy duty triband antenna for 10/15/20 meters. It is no toy at a 26 foot boom and strong construction.
It is extemely well made with beautiful castings for element clamps and materials not found in ANY antennas today!
If you remember the powerful signals this antenna put out when you were younger but couldn't afford it, well NOW is the time, or maybe to own an original unbuilt masterpiece.
It's kind of like a finding a Heathkit unbuilt but much more rare!
$600 pick up in West LA or you pay shipping
Will consider trades

>
> MINT: Well, it only has a few scratches on the lid.
>

Snipped ...

Here are a few more:

WORKED LAST TIMED I TURNED IT ON: Known to be working in 1956. Been stored in a barn since then.

CONDITION UNKNOWN: Absolutely, positively, without question definitely does NOT work

LIGHTS UP: At least one pilot lamp comes on before the main breaker trips.

COMPLETE BUT THE LINE CORD HAS BEEN CUT OFF: Most of the parts are there. May LIGHT UP. In any event this one welded the plug into the wall outlet just before the breaker tripped.

COLLECTOR QUALITY: Very dirty. With several days work you may be able to get the scum off the cabinet. Needs major corrosion removal from chassis. "Worked last time I turned it on".

CABINET PROFESSIONALLY REPAINTED: Nicely done, too. But all the panel MARKINGS have also been painted over. Now, which one of those round knobs is the volume control ....

WILL CLEAN UP TO A 9: Shouldn't be any problem once the nesting mice are cleaned out of it.

And so it goes ...

Grant/NQ5T

Thanks for reading. I have a DX100 that didn't survive shipping. I need a decent front panel, one of the tube sockets for a 1625 tube, and one of the small gray knobs. A cabinet would be nice but I think I can repair this one. Also looking for a 19" rack case with a 10 1/2" panel opening for another project. Any help or leads will be greatly appreciated. John N0EE

FORSALE - Lafayette LR-1500TA Stereo Receiver

I have for sale a Lafayette Radio model LR-1500TA AM/FM stereo receiver.
It is in MINT shape. I am the original owner (still have the sales reciept)
and was purchased new in 1970. It's all discreet solid state circuitry.
At the time it was the top of the line Lafayette receiver. Rated at
120W/channel peak (probably 50-60 W RMS).

If you're a collector of vintage equipment, this would make a nice addition!
Now taking bids.

For Sale a Collins 51J-4, rack mount, no cabinet. The unit works and is in good condition except that on the bottom right hand corner someone put thier Drivers licence #. Includes 3 filters: F-500B-14, F-500B-31, F-500B-60. I'm asking $575 plus shipping.

Thank you,
Robert Ramirez

3543. Parting out Halli S-38B - need anything?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-27 00:00:00 UTC
From: k5dh@ti.com
Message-ID: <632o8n$9gb@sf18.dseg.ti.com>
Source record: 114955
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I'm parting out a Hallicrafters S-38B receiver. Need any parts
for your restoration? The guts of the entire set are available,
EXCEPT FOR THE PARTS LISTED BELOW (which are either already gone,
or are not any good):
- Knobs (already gone)
- Cabinet (already gone)
- Bandswitch (rear wafer FRIED, front wafer appears okay)
- Slide switches (no good)
- Tubes (already gone)
- Line Cord (missing)
- Speaker (already gone)

Other than those few items, everything is available. The dial
scale and pointers are good. The dial window is a bit worn but
you should be able to polish it with plastic polish and use it.
The "cardboard" rear panel and bottom panel are in fairly good
condition (a lot of wear, but perfectly usable, especialy if
your set is missing them altogether). Let me know if you need
anything and we'll make a deal.

3544. need Simpson GENESCOPE manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-27 00:00:00 UTC
From: Steve Pazar <steve.zarco@worldnet.att.net>
Message-ID: <3454F0DC.4018@worldnet.att.net>
Source record: 114956

I purchased one of these boatanchors a while back, and would like to get a manual or a copy. I'll be happy to pay a reasonable price, or copying/postal costs.

For those that may not have seen one, this beastie was designed to' service early TV's and FM radios. It has two sig gens (both go to about 260 Megacycles (!)), and there is a 3" scope tube mounted vertically in the middle with a flip-up mirror so it can be viewed from the front. Very well made, and probably expensive in its day. And LARGE!

Thanks!

Steve

3548. A Lot For Sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-27 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <34556C87.5A6@foothill.net>
Source record: 114960

For Sale:

I just brought home the items described below.
The receivers have not been checked out unless it says otherwise.
I will check them out to be sure they work and need no serious repairs other than such as spraying controls and cleaning band switch contacts.
The transmitters are sold on the basis that the power and modulation transformers are good.
Descriptions of condition "good" etc refer to appearance.
Prices are plus packing and shipping unless noted otherwise. Packing will be stated, otherwise no charge for packing. Weight stated is shipping weight.
The items that I am willing to ship, I am also willing to take to Livermore.

HALLICRAFTERS SX-99 Very good Packing $10. Weight 40# $95

WRL GLOBE SCOUT 65 Transmitter Very Good. Weight 30#
Packing $3. Price $75

MORROW CM-1 Broadcast Receiver. Very Good. Weight 12# $65

HALLICRAFTERS HT-37 Transmitter. Very Good $145 You-pick-up, or I
Deliver to Livermore Swapmeet after payment.

HAMMARLUND HQ-140-X Receiver. Very good. Packing $10. Weight 70#.
Price $135.

SWAN SWR-1A SWR meter. In Original box with instructions. $25. Weight 5#.

MEISSNER SIGNAL SHIFTER, Signal Corps 02433. "A unit of Model 150-B" transmitter. Case is fair to good. Has drawer for coil sets. but no extra coils. Has one coil set - Band "D", 6.93-8.9 Mc. Weight 35#. $45.

HALLICRAFTERS HT-32A Good. Has a few small paint scrapes on front protruding edges. I was told it works good.. 85#. You-pick-up, or I will deliver at Livermore after payment. $90.

HALLICRAFTERS HT-32 Has top cut open to allow a fan to blow through. Otherwise it looks good. Face is very good. You-pick-up. or I deliver at Livermore after payment. $70.

HALLICRAFTERS S-40-B Painted poorly in a copper metallic paint. Was working, pretty good, but needs AC switch repaired. Appears complete but for the BFO Knob. Weight 30#. $25.

YAESU FT-101B Transceiver. Good. Works. Weight 45#. Packing $7.
Price $295.

AZDEN PCS-2000 2M transceiver. Original packing, papers, Mic, like new. Weight 30#. $145.

HALLICRAFTERS R46 Speaker. Fair. $30.

HALLICRAFTERS SX-71 Receiver. Good. Packing $7. Weight $80.

HEATHKIT DX-100 Looks fair to good. You-pick-up, or will deliver to Livermore after payment. Looks original and complete.from front. You-pick-up. or I deliver at Livermore after payment. $100.

GLOBE KING 400B. Looks good. Minimal modifications apparent. You-pick-up, or I deliver at Livermore after payment. $450.

KENWOOD TWINS. R599/T599/S599 and an MC-50 All in original packing and boxes, manuals. Look great. Four Boxes. Weights: 30#, 40#, 10# and 5#. $295.

Set of RIDERS manuals I through XIV. Volume V is in a National Union Binder. With Index. Weight????. Guess about 90 - 110#. They all appear to be good inside. The outside appearance of the binders varies from good to fair. $170.

From: Charlie Dumar <cjdumar@westelcom.com>
Message-ID: <3455DBFD.9D9CBBC1@westelcom.com>
Source record: 114867
Body handling: HTML body converted to readable text

I have a front panel for the BC-779-A Receiver. It needs to be cleaned
The paint has worn off in some spots and there is scattered rust amounting
to about 2 or 3 % of the total surface. The black paint on the dial windows
is about 25% gone. There scruff marks but no deep unrepairable gouges.

The equipment tag is on the panel but fairly rusted but readable with
the following:

SIGNAL CORPS U.S. ARMY

RADIO RECEIVER BC-779-A

SERIAL NO. 1773 ORDER NO. 81109 PHILA-42

MADE BY

HAMMARLUND MFG. CO. INC.

NEW YORK NEW
YORK

I have no use for this panel and would like to trade it off for
a Heathkit AM-1 antenna impedance meter.

If you have something else to trade drop me a note.

Message-ID: <19971028133901.IAA13477@ladder01.news.aol.com>
Source record: 114873

I have some older, highly collectible telegraph keys for sale from the estate of a relative. Please send me your offers for these if interested. Shipping charges will be additional to your offer and all items will be shipped your choice.

Vibroplex Company (these are from Georgia and NY but I have heard the company is still in business in Alabama)

Vibroplex Midget, thin steel with reddish brown enamel paint and brass nameplate.

"X" Model, thick steele black enamel base with brass nameplate. B&O RR decal on top. (former owner was a RR teleg. man)

WireChief's Key, tall, upstanding odd unit - chrome or nickel plated, nameplate is plated. Also marked with former owners name in hand painted letters

Vibroplex Standard Model, same base as X model.

Others

Les Logan Speed -X Key, looks somewhat like Standard model but smaller and paint is crinkle paint. New in orig box.

J.H. Bunnell brass telegraph key with long mounting bolts.

Unmarked key very similar to above but with heavier main actuating arm. I am told this is called a Camelback key and is quite old. It also has long mounting bolts. B&O RR markings stamped in base.

Key and Sounder Board, same key as J.H. Bunnell as above - name is worn though. Nice dark wood base with small brass pointed feet/. B&O RR stamped on wood.

All of these items are in very good shape and have been kept in a glass display unit for many years. I am told that these keys are very valuable and all are in near perfect condition by several people who are somewhat familiar with them.

Thanks - Rick

See Page 118 of Moore.
120 CW/100 W AM.
Needs external power supply but has internal modulator.
Final is a 5894, modulator is P-P 6L6s.
This one is in pretty good shape, but someone has added
a 6 meter position to an unlabeled bandswitch position.
Also has an extra hole in front panel. A little light rust on top.
Missing final but has audio/driver tubes.

As is for modualtor parts or put on air? $25 plus shipping.

If you want to fire it up I have some NIB 5894s, that I could sell.

Drake mavens, please help identify this item...

I just bought a Drake SC-2, which I'm told is a 2m receiving convertor that works with some Drake HF receiver. I've never heard of this unit before. I've asked around with the locals, and none of them have ever heard of it either. I haven't seen it yet (bought it off the internet sight-unseen) so I can't even visually describe it. It will not come with a manual or schematic, so I'll be needing those too. Can anyone help me out with this? Will it work with my 2-B receiver?

Dean K5DH

3563. FS - Palomar 2.5Kw tuner

Newsgroup: rec.radio.amateur.boatanchors

From: Doran Platt <jeepp@erols.com>
Message-ID: <3456668E.1B7B09CE@erols.com>
Source record: 114885

I have 2 blank amplifier chassis left from a group construction project. They are suitable for 8877 or 2/3-500Z, etc. The chassis has a lower plenum area for wiring (with removable bottom cover), a large upper area for the tubes and tuning components (with removable, perforated top cover) and a separate, recessed, shielded front panel area for meters and controls. They are about the size of a desktop Henry 2K, and are to be mounted to a front panel (e.g.: rack panel) or cabinet (not supplied). We paid $120 each but will part with the leftover 2 for $65 each plus postage.

I can include a 9 pin can that would help set it up as a plug in type.

For sale ARB radio set.
I have a ARB radio in very good cond. for sale. The radio has no outside modifications all orig. connectors and knobs ext. The radio is missing the dynamotor and band change motor. No other inside mods.
The set comes with:
CRV-10081 mounting base,
CRV-23256 operators control box
CRV-23253 receiver tunning head
CRV-23254 pilots control box
The pilots control box has two small holes on the side,all other acceserys are in very good orig. cond.
I am asking $200.00 for everything or best offer.
Thanks, John Richardson kb0upl

Yep I also had a 2010. It worked well but just sounded too tinny for my taste. Speaker was too small and it did not sound great on headphones.

If you want to go tube - go Hammarlund - they sound real nice. I have a HQ 100 and a HQ 145X hooked up to stereo speakers. Great Sounds. I use the HQ 100 every day for AMBC and SWBC. Not as easy or as accurate to use as the 2010 but with experience, you can nail your BC station everytime without giving a second thought.

If you want to stay solid state then get the SONY SW-100 Pocket RX. It sounds horrible with that little speaker but put on a good pair of walkman type stereo headphones and it sounds really really good. Plus FM is now in Stereo. You can fold the whole thing in your pocket and take it to work or wherever.

Most of the time I listen to BBC News Desk or Radio Netherlands for news.

I do miss Monitor Radio.... sure wish they could come back... I also miss the U.S. AFRTS audio feeds. Remember them?

Canadian BC stations also have a number of good programs - "Quirks and Quarks" is my favorite.

good swl'ing,

3582. FS: ATV Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-29 00:00:00 UTC
From: Michael <moreth@ix.netcom.com>
Message-ID: <3457F656.10FC@ix.netcom.com>
Source record: 114768

Slightly off-topic perhaps, but may be of intrest to some on the ng:

Amateur Television Station For Sale

PC Electronics Model TX70-1B Amateur Television Transmitter.
Currently transmitting on 439.25 and a second transmitting frequency can be added. 1.5 W p.e.p., full 25 kHz dev. broadcast standard 4.5 MHz audio subcarrier. Independent mic and line audio controls, RCA phono jack to camcorder or VCR, composite 75 Ohm video and line audio inputs, type N 50 Ohm antenna input, and 50 Ohm BNC output to downconverter connectors. Just over one year old; like new in P5 condition with original manual.

PC Electronics TCC-2G Amateur Television Downconverter.
Covers 420-450 MHz. Completely assembled in shielded case with on/off switch, on/off LED, connectors and an extra heavy-duty tuning knob you will love! In deluxe P5 working order.

What does all of this mean? Hook up the transmitter to a power supply, antenna, and camera or VCR and you are on the air transmitting video!

Looking for a $300.00 money order for both units shipped UPS Ground to continental US. Will not split.

Michael, N9OGC

I have the following vintage parts for sale. These can be identified in the advertising sections of 1940s and 50s ARRL Amatuer Radio Handbooks if you want to see what is for sale here. Prices are $US plus shipping.

National A.M. Velvet vernier dial and pointer - $15.00

Set of 5 knobs for National HRO 5 type receiver. These consist of audio gain, rf gain, cwo, phasing and a 0 - 10/180 knob. $15.00

James Millen Right Angle Drive. Part# 10012. $15.00. I will also include 2 James Millen flexible couplings (part # 39016) with the drive so you can connect your variable capacitors properly. I have 3 extra couplings at $2.00 each.

These are great parts to have if you are building antique ham projects, or making something out of the old ARRL handbooks.

Larry/VE3RF

I have an old HP DVM, model 3430A I think, which worked when I bought it many years ago but most recently displayed garbage when I turned it on.

I'm trying to decide if I should try to restore it or scrap it and re-use the enclosure for one of my projects. It's a really nice enclosure.

Any advice?

I just discovered a very informative collection of recently published historical books which many of you might be interested in; they're published by the Institution of Electrical Engineers (UK), in association with the London Science Museum.

Here are the titles in the series:

Volume # Title
1 Measuring Instruments - Tools of Knowledge
2 Early Radio Wave Detectors
3 A history of Electric Light and Power
4 The History of Electric Wires and Cables
5 An Early History of Electricity Supply
6 Technical History of the Beginnings of Radar
7 British Television - The Formative Years
8 Hertz and the Maxwellians
9 Vintage Telephones of the World
10 The GEC Research Labs 1919-84
11 Metres(sic) to Microwaves
12 A History of the World Semiconductor Industry
13 Wireless: The Crucial Decade, 1924 - 1934
14 A Scinetist's War - The War Diary of Sir Clifford Paterson 1934-45
15 Electrical Technology in Mining - The Dawn of a New Age
16 "Curiosity Perfectly Satisfyed:" Faraday's Travels in Europe 1813-1815
17 Michael Faraday's "Chemical Notes, Hints, Suggestions and Objects of Pursuit" of 1822
18 Lord Kelvin: His Influence on Electrical Measurements and Units
19 History of International Broadcasting
20 The Early History of Radio - From Faraday to Marconi

I'm currently reading Volume 20 (94 pages in length).

I found these in our campus library. If you're not so lucky, then write to:
The Institution of Electrical Engineers
Michael Faraday House
Six Hills Way, Stevenage,
Herts, SG1 2AY, United Kingdon

3606. Refinishing Metal Cabinets

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-29 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <3457C3DF.5480@ford.com>
Source record: 114912

Anyone out there have any experience or thoughts on this...?

My case specifically is a National HRO-50 w/matching speaker. Both cases have original paint, but are well worn. That's not a problem, but the hinged lid has some surface rust, and the paint is probably gone for good in this area.

Obviously matching the color and just doing the lid is going to be next to impossible... a nice shade of metallic grey should do the job, provided the entire radio cabinet, speaker cabinet, and coil set front plates are done all in one shot.

The sticky issue here seems to be the lettering. If you've ever seen one of these first hand, it's etched into the cabinet, and white paint is filled in. I'm kind of wondering how I can refinish the cabinets but still be able to restore the lettering to the original condition. It seems as though I could do it easily enough with something like "Lacquer Stick" once the rest of the painting has been done, but would the paint for the cabinet fill in the lettering grooves and impede that...? I was thinking that perhaps once the grey painting was done and rubbed out and all that, that I could go through the lettering with something like a sharp scribe to clean out any paint in there, and restore the sharp edges for the Lacquer Stick.

I have not started this project at all yet; wanted to hear some voices of experience out there first. Or mabye I should just clean things up as best as I can and be content with it as is...? I'm mainly concerned about preventing any further rusting where it has already started; at this point it looks like it's just on the surface and could be cleaned up.

Are there any emotional issues surrounding refinished cabinets, or does this sort of thing get done often...? Am mainly interested in restoring this wonderful receiver for my own collection, and am less concerned about whether or not refinishing would affect its value (value is kind of a meaningless thing when you intend to keep it, anyway).

Thanks in advance...

C.K.

Message-ID: <19971030030500.WAA18121@ladder01.news.aol.com>
Source record: 114773

According to an article in Electric Radio a few issues back, the HRO was developed without a formal name. It was done in a very short period of time, and the initials "HOR" (Hell Of a Rush) began to appear on work orders. This was unacceptable as a final name, so it got switched to HRO. Maybe the story is just a legend, but it sounds OK to me. In general, though, National designations like PW dial don't stand for anything.

>Hmmm....Excuse me??

Same thing I thought, but that's what it says. I would think it should
be a bit more complex than that, but maybe it's because they limit the
physical design to a given ratio of thickness vs surface area.

On Tue, 28 Oct 1997 11:01:40 -0600, aor@gteais.com wrote:

>Tom,
>Where did you see these resistors listed for such a price?
>I called every resistor mfgr to get a price. Most were
>$2-$3 dollars per watt, for non inductive ceramics.

And you have to be careful because a lot of those non-inductives are
not non-inductive at RF.

As to the price, from a BOM priced out in 1996 from Stackpole.....

90 watt oil 4.94 each
250 watt CCS non-oil 6.32 each
300 watt CCS oil type 10.56 each

>The replacement resistor for the Heathkit Cantenna was
>in the $30-40 range for single units. Most would not
>even talk about a single unit... at any price.

Like I said before, retail or street $30 seems fair in one piece.

>I have 8" and 12" resistors working thru 500 Mhz with
>a flat SWR. We placed a brass strip on each side to
>create a ground plane to make the resitor follow the
>Zo calculations for 50 ohms. The resistor is the center
>conductor of stripline design. (sort-of..)

That helps, but the best idea (as Tom B and myself posted) is to
surround the resistor on all sides and making the line impedance match
the ADJACENT resistance. One end of the resitor is at zero, and the
other at 50.

In other words, at the ground end the line should be zero ohms linearly increasing at the middle point of the resistor to 25 ohms, and continuing until the feed end reaches 50 ohms. Of course the most critical point is near the open end, so you really don't need to go to zero at the far end.

>We made dummy loads for our club where 16 resistors
>were soldered over a ground plane and the SWR never
>moved (1:1). I have no equipment over 450 MHz, so
>I have no idea where it becomes inductive. Bird watt
>meters were used. The 16 resistors, brass, and a
>quart paint can totaled less than $5 bucks per dummy
>load. Medical-grade mineral oil was used as the coolant.

Sounds like a great project. More people should use dummy loads.

You brought up another good point. The Bird 43 meter is rated at + or - 5% of the full scale reading anywhere on the scale. So if we use a 100 watt slug, a within tolerance meter can read 5 watts high or low anywhere on the entire scale.

In the reflected mode, with 100 watts forward on a 100 watt slug, the reflected power can be as high as 5 watts without showing anything, and the meter still be within rated tolerence. That means a 1.6:1 SWR could show up as 1:1, if the same slug set to full scale is used to read forward and reflected power.

Thank goodness for that, because most 50 ohm coaxial lines aren't even fifty ohms. ;-)

Message-ID: <63ah1s$f38@dfw-ixnews8.ix.netcom.com>
Source record: 114791

For Sale:

2 tube receivers

Harmon Kardon TA-230

AM-FM; stereo preamp and amp. Tuner section is side by side mono with MPX out. Uses 4 x 7408 (6v6 is a plug in sub). Both tuning eye tubes are strong and bright. Weak tubes have been replaced, controls have been cleaned and lubricated. Clean brushed aluminum face with clear painting. Works and looks great, with no hum. On/off switch has been replaced. No case. Have Sams photofact for slightly later unit with the same circuit.

$125.00 + shipping

Pioneer SX-34

AM-FM stereo with onboard MPX. Uses 4 x 6bm8. Works perfectly with no hum. All original tubes, includeing strong tuning eye. Controls have been cleaned and lubricated. Looks very good, few scratches on metal case. On/off switch has been replaced.

$100.00 + shipping

Both units sound wonderfull and would make excellent candidates for office/second system/bedroom usage.

Please reply to:

rl1856@ix.netcom.com

Thank you,

Ross Lipman

Source record: 114792
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale:

two each T-368 Transmitters. Reasonably complete and in repairable condition. No final or modulator tubes, with
3B28s, some small tubes, 6000 tube is in the exciter, with external FSK exciter unit which is complete as far as I can tell. Have had these units in storage for years and have concluded that I will not get them going with all the other projects. These are for PICK UP only at my Sacramento QTH. They have not been tested and I cannot answer any questions other than what I have already stated. The are not rust heaps and they have all the knobs and stuff. a few of the big mounting bolts on the roll out units are missing and I have no idea where to get 'em. I do have some docs for the units. I will not part out the units at this time.

The prices are $500 each with external TTY exciter. I am anxious to get them out of the garage. I can arrange for weekend inspections with a couple of days notice.

Tnx for the read and 73.

I am reminiscing after receiving the latest Swan Net newsletter and would like to acquire a Swan rig again.

I am looking for a rig that doesn't have to be museum quality (I intend to use it!), needs to be at least marginally functional (I'll tinker with it over the winter), must not have been "hacked" (modified, rewired, drilled, etc. - don't care if 3-sided case cover has been poorly painted or is scratched, I can repaint that, the face needs to be reasonably intact)

I want only one of the following, and in this order of preference (from most to least wanted):
750
500CX
500C
350D
Others considered.

Price IS an object! This is to be my toy rig and I have very limited financial resources. Value will be assessed to include the condition of the finals, physical condition, operating condition, shipping cost (I'm in So. NH), etc.

I Also Need A Power Supply (Preference in this order):
Swan 117XC
Swan 117C
Galaxy PSA-300
Galaxy AC-400
Hallicrafters PS-500
Galaxy AC-384

Other Accessories Sought:
WM3000 Wattmeter
FP-1 Phone Patch

Thanks for any offers, or suggestions of sources!

3648. R-390 Mailing list is now "radio-active"!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-31 00:00:00 UTC
From: mc@shore.net
Message-ID: <63drqo$jpv@northshore.shore.net>
Source record: 114812
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave

Annoucing a new mailing list:

The R-390 Mailing List is for the discussion of the features, operating, troubleshooting, repair, maintenance, improvements and general lore related to the R-390 family of radio receivers which were developed for military and government applications. This group includes the R-390, R-390A, R-392 as well as their variants such as the R-389 and R-391. These radios were designed and developed by the Collins Radio Company of Cedar Rapids Iowa but were made by different manufacturers under various contracts spanning almost 35 years from 1950 to 1984.

The List administrators are concerned with the growth of speculators and profiteers which have been pervading the vintage radio hobby of late. Consequently we have adopted the following guidelines on a temporary basis in the hope that the abuses seen elsewhere will not occur here. FOR SALE, WANTED and SWAP postings by PRIVATE PARTIES are acceptable but not encouraged due to the many other alternative outlets for that information. Furthermore, we request that such posts be limited to the equipment under discussion. Commercial postings, announcements and SPAM are NOT welcome. If in doubt of an article's suitability, DON'T POST IT and ASK!

It is hoped that all subscribers will contribute material to the R-390 List as it is the knowledge, wisdom and experience that will make t his list a useful, informative and valuable resource.

The advisory board of the R-390 List are:

Co-administrators are Chuck Rippel, WA4HHG, and Michael Crestohl, W1RC.

Historical Advisor is Tom Marcotte, N5OFF.

To subscribe to the list you can send mail to:

majordomo@qth.net

with the following command in the body of your e-mail mesage:

subscribe r-390

Please address any questions to: crippel@exis-net
mc@shore.net

PLEASE include [R-390] in the Subject: line

Duh. Pardon my ignorance, but what's an ST-5000?

3653. Velvet Verniers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-31 00:00:00 UTC
From: dledoux@laci.net
Message-ID: <63e195$kn5@news1-alterdial.UU.NET>
Source record: 114817

Well, every job has to have its fringe benefits. In my case, we are de-installing some fifties-vintage carrier receiver-transmitter units. These are tube technology, and each unit (I have access to two) has three "Velvet Vernier" drive units with approximately 6" diameter logging scales (stainless steel). Two of the drives are connected to large variable caps (probably up to 300pf and good for antenna tuners up to maybe 150 watts). The third drive on each unit is connected to a variometer inductor suitable for the frequency range of the units, which is in the 80-90khz range. An additional couple of capacitors have direct drives with beautiful 3" stainless logging scales.

Now, the nitty-gritty: I know that this stuff is BIG for a lot of the backpack up Mt. Whitney QRP crowd, but for us homebound ops, this is the makings of some fine equipment. Velvet Verniers used to be one of THE best-known reduction drives. I plan on keeping a couple and parting with the rest. What are such things worth?

Thanks
Dale

3655. National HRO-60 B+ Power supply question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-10-31 00:00:00 UTC
From: Dennis Gibbs <dgibbs@rational.com>
Message-ID: <345A8EC2.26CD@rational.com>
Source record: 114819

Greetings all,

After the Trick-or-Treaters were done this evening, I decided to fire up the 'ole HRO-60. The
last time I fired it up, I had suspected that the B+ supply was marginal. I tested the OB2 in
my TV-2B/U Tube tester, and it came out fine. Substitution of other 0B2 tubes didn't seem
to change anything.

Then, by accident, I discovered that the receiver still operates with no VR-tube in it! The
manual indicates that the HF Oscillator tube (a 6C4) and the S-meter amplifier tube (a 6SN7)
have their plate supply regulated by this 0B2 VR tube. When I pull the 0B2 out, the S-meter
moves to zero, but there is no apparent change in the sensitivity of the receiver! I can still
tune in and listen to various stations.

Interestingly, I vaguely recall that when I bought this receiver at a hamfest several years ago,
someone had put an 0A2 VR tube even though an 0B2 is clearly called for. I'm now suspecting
that something is wrong, but I haven't yet begun to dig in yet.

Before I do, has anyone else had any problems with the B+ supply with this receiver? If you
have an HRO-60, does it still play when the 0B2 is removed?

Thanks for any help you HRO-60 owners can give.....

Dennis Gibbs

Paring down my Swan collection; have for sale a 12 channel, solid state Swan 2 meter FM rig, power supply, and hand mike. Condition of each piece as follows:

Swan FM1210-A 2 meter FM rig (serial number 10290)- Has minor scratching on case. All original knobs and HI-MANUAL copy. Works okay. No mobile bracket.

Swan FM1210-A Power Supply (serial number 10318) - Matching 12 V power supply. Case in about same condition as rig. Missing a 12 V outlet originally wired in parallel to 6 pin Jones plug (resulting hole about 1/4" wide by 1/2" high). Can be easily plugged or reinstall right jack.

Swan M1002 Microphone - 600 ohm dynamic handmike for FM1210-A.

Will sell only as a package. Asking $50.00 plus shipping.

Thanks,

Karl - W5QJ

I've paid from 5 dollars each to 15 dollars for the drives
without anything connected. When I see them for more than that I
pass. 6" units I would pay up to 20 bucks for.
your milage may vary.

3679. Collins mechanical filter info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-01 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19971101174101.MAA23789@ladder01.news.aol.com>
Source record: 114843

I have 2 Collins mechanical filters for which I have absolutely no data except the part number and physical description. Both are cylindrical with pins/wires at each end. 2-1/4" long, 7/16" diameter, no mounting flange.

Filter #1 is p/n Y-120/12 N 2. It has pins for connection, a winged emblem and is in excellent condition.

Filter #2 is p/n DUJ-85000-1001-526-9489-001 6608. It has wire leads for connection, a round emblem, and is in good condition.

Anybody have technical data (center freq, bandpass, termination impedance, etc.?) or other data, such as what they were used in and what they're worth?

All help greatly appreciated.

73 de Jim, N2EY

Source record: 114848

$75 is NOT way-y-y too high. It is completely irrelevant what you paid in your Novice days-unless they were last week. T-60s that "Looks great, works great" are usually priced around that area-perhaps the norm is a little lower, but $75 is most certainly NOT outrageous.

Hi Jim... neither of those filters is listed in my 10/62 Collins Mech Filter Bulletin 1031. The latter, with the 526-part number IS a Collins part number-it just is later than my booklet covers. Better would be an F###x-## which they usually put somewhere on their mech filters... the 'x' being a letter. The 1st 3 ###s usually represent the frequency range and the latter two numbers the BW. Not ALWAYS, but usually. So, an F455E-21 is a 455kHz 2.1 kHz filter. (Exception notably being one labeled: F##Z-7 or F###Z-7 or F250/300/455/500Z-# which are all USB or LSB SSB BW filters [~3 kHz]). Good luck.

3687. Johnson Viking keying questions &c

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-01 00:00:00 UTC
From: nilsbull@aol.com
Message-ID: <19971101210800.QAA12933@ladder02.news.aol.com>
Source record: 114851

Gang,

Here's the deal: I have a Johnson Viking transmitter/exciter about which I am getting excited. I'd like to get this beast running clean, but when I turn it on and take it out of standby, it quickly goes to key-down and stays there until I put it back in standby.

Among the paperwork that came with this beast is a folder explaining the use, construction and installation of the "Ranger Keyer Modification." Lots of stuff about timing VFO circuit before drive/buffer/doubler/output &c and grid block keying. I haven't chased this'n down much, but messin' with the "VFO keyer adjust" pot (R39) on the top of the keyer mod panel doesn't do much.

Maybe I'm gonna have to make sure all the other mods connected with the keyer mod have been hosed up. Suspicions are, however, otherwise.

I'm taking hints and outright suggestions. Operators are standing by.

Isn't that EXACTLY what it is supposed to do? Transmit until placed
in standby? I am confused. Do you have a key placed in the key jack,
if not, the key jack may automatically maintain the contacts. If it is
going directly to transmit with an open key in the jack, then it sounds
as if the negative supply feeding the grid block keying may have failed.

3710. Want: '70's HP Test Equip. Catalog

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-02 00:00:00 UTC
From: John Burch <occupant@ns.net>
Message-ID: <01bce74c$4a55d0c0$acf277cc@default>
Source record: 114726
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hello: I would like to purchase a Hewlett Packard test equipment catalog dating from the mid-to-late seventies. The general condition should be good enough to allow the thing to be read, and I don't care if someone's name is written all over it. The information regarding HP's products of that era is what I'm interested in; the catalog is not going in some museum someplace.

Will gladly pay for your catalog, plus postage from your location to the Left Coast.

Thanks de John WB6GHA

3711. JOHNSON RANGER: NO GRID CURRENT

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-02 00:00:00 UTC
From: vfo@worldnet.att.net
Message-ID: <63h74f$1t2@bgtnsc03.worldnet.att.net>
Source record: 114727

Hello,

I have a Johnson Ranger that will not register any grid current when in the tune mode. When I turn the drive control pot (which is good), nothing happens. Everything seems to be fired up elsewhere. There is about 40 ma. of plate current when I switch the meter over. The oscillator is also registering. There is also no buffer reading at all. All tubes are good and there is no smoke anywhere.

Any ideas?

Thanks in advance for any suggestions.

Bill

My friend just bought one at the Stone Mountain GA hamfest yesterday.
it also had a power supply built in to it. fm/sideband swicth power
meter on the front.
It was in real nice shape i think he gave 150 for it. I had never seen
one before. it was newer type amp rack mount but it was not wide enough
to be full size rack. if you want to ask him about it just e-mail him at
wb5apb@juno.com. tell him that Randy ke4yzn told you about it. I forgot
his hard drive his down you might give him a week or two. meanwhile I
will talk to him about it. If you have any need any more info just
e-mail me for now. I will pass it on to him. Maybe he can call you.
I am not sure but I think he had a manul with it.

Source record: 114735

Browning Golden Eagle Mark III three pieces sold as a
set $600.00. Overall appearance is very good to
excellent & it was working
when removed from service. There are no books or
microphone with it. Each piece has a metal case w/
faux wood grain covering. Front panel &
markings on all three units are excellent. The only
observed problems with these units are as follows:
Receiver has a few light rust spots on the
transformers & chs. Transmitter has few light rust
spots on the transformer. SSB15 Transmitter has 1
spot of chs rust & there is a good deal of flaking of the
faux wood grain case covering on top.
Price + S&H from Baltimore, Md. Will consider reasonable offers. International
shipping
available. Contact vintel@aol.com to order.

Also
10 ea 1X2C & 10 ea 3A3(3A3B, 3A3/3AW3, 3A3C). NIB TUBES. Price $1.50 ea +
shipping from Baltimore, Md.
20 Electrolytic capacators, paper cover, under chassis mount w/ mounting strap,
multi-
section, 150V. The type that was used in a lot of "All American 5" radios. All
are unused.
General Inst, Aerovox, Planet, etc. 80 & 50 mfd, 50 & 30, 40, 20 & 20.
$17.00 + $4.00 shipping in contenintal US.

Cant ship these but will deliver 1\2 way within reason from Midland\Odessa, Texas. #1. Henry 2kd-5 amp, full out put from 2 @ 3-500Zs. In good physical shape for its age, and looks and works well. I will not ship it as I have tried and failed on rigs this heavy. Its a desktop linnear , but barely, it must weight 70 lbs. $700.oo and I will drive up to 100 or so miles to meet you if necessary. #2. 2 element 40 meter Yagi, HiGain Discover 7-2 latest model with balun and in good shape. Been up in Texas for about 2 years. Linnear loaded, no traps, and works well on 17 meters as well! $250. and Ill meet you. I could deliver in OKC area in mid november, I could deliver in Austin area in late november! Its not torn down completely and I dont want to!!.... Email with interest! Thanks Murray Neece

Source record: 114676

Seth is correct about the batteries, but I found that one must adjust the internal "course" ohms adjustment when you first use these batteries. I suspect the original MIL battery voltage may have been a bit different, necessitating the adj. . At least this was the case with about 10 new units that I've passed on. Regards K3HVG.

Ah, but what about the horrible brown dry cells to work 'em?

I remember the ones in our 88 sets in the school cadets (I was
conscripted) being so knackered that you could get out of radio range of
the other guy when you could still see him across the training grounds
at Aldershot! In fact, I reckon you'd have managed nearly as well by
shouting. They were antiquated things even then (late 60's), so they
must be real collector's items now.

Good luck

Rick

3770. Help on Eldico Twins needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-04 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <63m0u7$gae@camel18.mindspring.com>
Source record: 114685

I have the Eldico twins (often called the Collins clones) in the complete fixed station system package. The main problem with this gear is the very stiff tuning system. One can wear out their hand and wrist just tuning moderately about each band.

Does anyone have suggestions about modifying or at least using spinner knobs for the twins?

73, Dave K4JRB

3774. Trade 75A1/270G-1/312B-3/TS-930

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-04 00:00:00 UTC
From: "Lane C. Zeitler" <km3g@cts.com>
Message-ID: <01bce9ba$dadc70c0$829fd8cc@km3g.cts.com>
Source record: 114689
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.swap

I have a 75A1 with the 270G-1 speaker and a 312B-3 speaker. Cosmetically all are about a 7.5. I have the original (and very pristine) manual for the A1. Electrically the A1 currently is in need of some TLC. The audio gain pot is defective, the other pots and switches are very noisey, and most likely some of the tubes are soft. All units are restoreable to collector condx, but with patience and a loving heart.

I do NOT want to sell but would rather trade. I would throw in my TS-930SAT with this package and trade everything for either a Knwd TS-850SAT, Corsair II with accessories, or OMNI V.

thanks for the read

Source record: 114619

Hi fellas;
I have a beautiful Collins 75S-3B WE for SALE, with original manual, no extra filters, just the ssb filter. The radio is CCA EXC. The only blemish is about 1/8" long, right at the begining of the top lid. It appears to be a factory blem in that they did'nt let the metal treating chemical completely dry prior to painting, so it was'nt a good bond. Its an easy fix, but no paint or time. Otherwise its near Mint, no scratchs, dings, dents or scrapes.
Price is $600- shipped Conus!
Thanks es 73.....RICH RLUCCH2098@aol.com

Wanted: RME-45B receiver. Should have "Cal-o-Matic" tuning (two speed tuning drive radio) and VR tube local oscillator regulation.

3809. FS: Yaesu FT-101 parts radios

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-05 00:00:00 UTC
From: mc@shore.net
Message-ID: <63pjpj$fdi@northshore.shore.net>
Source record: 114626
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have one FT-101E and one FT-101EE parts radios for sale or swap that I don't have any present use for.

Both are incomplete; the 101E has a couple of the plug-in modules in it, the 101EE doesn't have any. Both units are complete with power transformers and it would appear the rest of the parts are present. They both have nice clean front panels, knobs, meters, etc but no cases. I would doubt that they are restorable unless you have the plug-in modules so they are being offered as parts radios only.

I would like to sell the 101E for $85.00, the 101EE for $75.00 plus the actual UPS costs to ship from Zip 05444

3814. FS: (2) 32S-1's, (1) 75S-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-05 00:00:00 UTC
From: w4la@aol.com
Message-ID: <19971105161701.LAA23128@ladder01.news.aol.com>
Source record: 114631

I have two 32S-1's. Both are very good condx. from an external cosmetic view. No dents, dings, original paint, just a few natural wear marks and scratches.

Unit "A" works fine on all bands and all modes, but has a very dirty inside (previous owner was a smoker). Can be cleaned with patience and a tooth brush. There is also a mod mounted inside (easily removed) that I think was used for rtty (no physical changes that I can see to the chassis).
The second unit, call it "B", is very clean inside, but has an intermittent problem that I think is in the bandswitch. If I remember it works on 20 and up (I don't really remember, (it has been on display in my shack for two years). I bought about two years ago, but I don't have the time to trouble shoot.
Both have the original manuals. I don't have a Collins power supply for sale, but I do have a Heath supply that works. Make me an offer on either or all.
I also have a 75S-1 that was owned by the same person that owned unit "A" above. This has RTTY filters installed in the "AM" positon. Physical condx. is identical to unit "A" above. Works very good in all but AM modes. Have original manual with modification changes shown in "Red" on the schematic.Make offer.
Thanks and 73's,

Todd / W4LA

3815. National HRO-50

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-05 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <3460A4F4.6BC1@ford.com>
Source record: 114632
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave

Who was the guy at National that decided to hold the chassis against the front panel of the cabinet with the 3/8" bolts that hold in place the levers for installing/removing the coil sets?

I finally got them out, but -- jeez... between that, the crystal phasing knob that was seized on the shaft (had to remove it by loosening the collar on the shaft inside the cabinet -- thank God *that* was there), and a PW knob that had set screws for which I needed to permanently modify one of my Craftsman screwdrivers to reach... this was easily the toughest chassis removal job I have ever had.

I take it the R-390 is even worse...?

C.K.

> I see that you live in 3-land, and I know prices are higher there
> because people have money to burn (grin!)

Actually yours is a point well taken, prices for what is now considered "vintage" gear are all over the board. A hamfest is probably the best place pick this stuff up. At Indianapolis this year I picked up a very nice TS 520s for less than $200. I had my eye on a Drake C Line there but the guy wanted $600 and would not budge.... he took it home. It is all in what you are willing to pay and what the seller will take :)

Although I personally do not feel that $75 is too high for a nice T-60, DX 40 etc, I have seen them lower. I have also seen them higher. (DX-60 with the HG10 for $200) Sometimes prices can get crazy.... reference the used prices for Collins gear... especially the 75-A series of receivers. I have

also seen as high as $1,500 for an SX-88 posted here. Obviously these are not in the T-60 class.
If you have the money and really want the item, you may pay the price. However, most sellers on this newsgroup will dicker a little if their asking price is not met in a few weeks.

Prices in the east are high, but I live in Kentucky... prices are still too high here also :)

Met the fellow that produced these sheets back in the early 70s. He was a retired industrial art teacher in, I think, Sycamore, IL. I bought a set of them and have used them ever since. He did offer updates and back copies them. I don't know if the current operator (his daughter?) continues doing this or not.

The only other place you might find this information would be in a collection of back QSTs (full of moths and mold). Maybe it is time to republish something in this line.

Cliff,

In reply to your questions:

>1 -- Does the rig operate on the WARC bands?

NO>

2- What finals does it use?
>
>

6146 - Two of them>

3- What do you like or don't like about it?

It is a solid rig, with good features and they can be purchased for $250 plus or minus depending on condition, filters, microphone, etc. And, a lot of them were sold, so accessories are still relatively easy to find. However, it is not chock full of bells and whistles.

I have owned one for about 20 years. Don't use it much, but it has served me well. And when lightning took out the audio output transistors (don't leave your phone patch hooked up to the phone line!), I fixed it myself. Recently, I removed the adapter circuitry from another 520 and installed it on my rig so that I could use a digital display (DG-5) with my rig. So, what I am saying is, YOU can actually work on the thing yourself!!

73,

Bill

I have a vast supply of Teletype parts which I would like to donate to a group that would be able to make good use of them. I would prefer that they would go to a cause that might be preserving the mechanical history of the teletype; i.e. keeping the darn things running as part of our electromechanical past. I like here in San Francisco so I could either make arrangements for them to be pick up or the group could cover the cost of shipping them to wherever they might be located. Any suggestions??? Please feel free to forward this message to anyone who might be interested.

Thanks...

Pat

You are so right! A fellow ham friend is into refurbishing and using old ham gear. Some of the prices he pays for old gear really shocks me. What shocks me even more is how much he gets for the same equipment once he has brought it up to his standards. It is unbelievable!

I too have a Knight Kit T-60 for sale, and at the same price of $75 plus shipping within the continental United States. Don't know if it even works because I have never plugged it in.

3840. The Eddystone Company

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-06 00:00:00 UTC
From: Roger Palmer <rpalmer@islandnet.com>
Message-ID: <01bcea4d$294c9f40$08af35c6@Roger.islandnet.com>
Source record: 114642

A few weeks ago I posted a message looking for a manual for my Eddystone 770R radio (19 MHz to 165 MHz). I received several replies, but no one had the manual I was looking for. One message suggested that I contact the manufacturer directly, as there is apparently an Eddystone Collector's club that operates out of space at their facility.

I sent a fax to the company asking whether or not they might have a copy of the manual, and how much it would be. Imagine my surprise when I received a fax back the next morning saying that they not only had the information, but were sending me a complete manual AT NO CHARGE!

The manual arrived a few days ago, and I have now been able to use it to get my radio working again.

This kind of support from equipment manufacturers is remarkable, and truly heart-warming!

You are quite right Chris. The typical prices I see on these at
hamfests is $30-40 ASKING, and often $20-30 selling.

I bought mine used in 1967 for $30.

3842. FS- Gonset G76,PS, RME 4350

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-06 00:00:00 UTC
From: JM <jmul@iland.net>
Message-ID: <01bcea52$4f37b500$9ee7f2cd@jmul>
Source record: 114644

I have a Gonset G76 transceiver with matching power supply/speaker,
original manual. All original except for one knob, usual paint chips on the
cabinet edges.
Also have an RME 4350, looks good, works OK, probably could use a little
tweaking, Main VFO knobs are not original.
I don't know what to ask for this stuff, so I'll listen to offers. Thanks,
John

I want to buy (for my personal use) preferably a Hickok 539C tube tester in good operating and clean condition. Will consider a 'B' or 'A' model, but strongly prefer the 'C'.

I am looking to pay a fair price, but not 'business' price.

Please email me if you have one. I need it for my tube stereo hobby.

Thanks, Steve

Best thing you can do to an HQ-170 is to leave it exactly the way Hammarlund made it. Hammarlund made a noise blanker as an accessory that was available late in the production of the 170/180 series. Unless you can find one of those (they DO show up, though not very often) I wouldn't hack around trying to implement something else.

The HQ-170 and general coverage HQ-180 are fine receivers as is, and are thought by many (including me) to be a couple of the best vintage receivers produced for the amateur market. They're not the most stable, and they're not the most precisely calibrated, but they play as well as anything else you'll put your hands on.

If you don't have a clock in yours, and want a good repro, check out http://www.accesscom.net/~kk5hy/r&r.html

In reply to your questions:

1) No it doesn't work 30, 17 or 12 meters. But it does cover all of 10 and some models cover 160 and receive WWV at 15 MHz. (See below).
2) The rig uses two 6146A tubes in the final and a 12BY7A driver. You will get an honest 100+ watts CW/SSB output, the tubes are quite rugged, and are commonly available at decent prices. Tuneup is easy and there are no tricks to the set.
3) What I like:
- Good basic rig with few bells & whistles but everything you need to make lots of solid QSOs on any band/mode.
- Lots of documentation, easy to work on, easy to use, small but not too tiny.
- Small but not too tiny.
- Tube finals - will handle moderate SWR (<2:1) and there's a built in fan.
- You can still get accessories like a CW filter, mike plug, etc., without searching too hard or paying too much. Only the DG-5 digital display accessory is rare and costly.
- You can turn off the AGC. This is VERY IMPORTANT for working CW or SSB in a crowded band, but very few "modern" rigs let you turn the AGC completely off.
- They're inexpensive and plentiful, so if something happens you're not out too many $ and you might even get another one.

What I don't like:
- Tuning rate is about 20 kHz/turn of knob - I like about 5-6.
- Digital display not built in.
- Only one accessory filter position.
- Not American made.
- Won't run full power on 12VDC - only about 50-60 watts.

Additional info: There are actually three models of this rig:

TS-520:Early model, no 160 meters, no provision for digital display.
TS-520S:Most common model, 160-10, optional DC module (bolts on the back of rig) and digital display.
TS-520SE:Late "economy" model. DC provisions removed.

Used a '520S on Field Day for many years. Liked it a lot! (But not enough to give up homebrewing!!)

Yes the 170 is fine the way it is, but I believe it can sound
better. I plan on doing audio mods on my HQ180, which is very similiar
to the 170. I believe by eliminating the circuit that changes frequency
response with change in volume positon, changing it to a conventional
circuit, and add a little bit of negative feedback around the 6aq5 audio
out, and smoother better, less distorted audio can be acheived.

A follow up to the other posts from W1KI

I've had a TS-520S for over 20 years. Here are a couple things to consider:

I built my own DC supply so I could run it mobile. Cost me about $15.00 for the parts years ago. Agree, you will not get quite as much power out on DC as when you run the rig from 117 VAC, but it works fine. I have had many happy hours of mobiling with it.

I modiied the fixed channel switch to enable a variety of filter positions in each mode. This allowed me to install a second switchable(Fox Tango 8 pole)CW filter.

I replaced the front end RF transistor and the two reciever mixer transistors with low noise types. Also replaced the diodes in the ring detector with HP Schottky types. End result: Nice received audio, very sensitive on 10 meters, but overloads a bit on 75 unless you use the 20 dB attenuator.

I had a problem with low output with no agc on 10 meters a couple times. Replaced the 12BY7 in each case and things went back to normal. The finals are still the originals (Not 6146's but the Japanese equivalent S-2001)and they still work fine.

I do have a couple newer rigs, a TS-440S (my current mobile rig) and a TS-850S. I love them, but I still have the old '520 and it will probably be running long after me!

Dear Friend of the Teletype....

My parts have found a good home in San Diego California. As it turns out, there is a Museum being built for the preservation the the Teletype and other related Telecommunications Equipment. There web site address is:

http://www.hem.com/nadcomm

Contact Don at dhouse@abac.com if you to have any Teletype or related parts you would like to find a home for.

Best of luck all!!

Pat

I made the mistake of storing a Heathkit Cheyenne MT-1 with a car battery for several months, and when I looked at it today, I discovered that the front panel and much of the case had been encrusted with battery acid. So I'm selling it as a junker for the total price of the tubes, which are all still good. Tubes are:

0A2 CBS-$3
6DE7 USA made Heathkit brand-$4
12AX7 Mullard made Heathkit-$10
6AU6 Mullard made Heathkit-$4
6CL6 GE-$5
5743 RCA-$6
6146 Raytheon-$18

Total is $50. Also available: rare HP-13 power supply for $20. Remove spamblock x's to reply.

Source record: 114602

I am considering getting my Fathers old HT-32A transmitter up and running. I need some assistance with tube information as I no longer have a tube manual. Basically, the question is this:
Can a tube with an "a" suffix be used to replace a tube without one?
For instance, a 6AH6A used for a 6AH6?
Or, a 12AU7A for a 12AU7?
etc, etc.
I would be interested in a tube manual if anyone has one in good condition for sale.
Thanks in advance for any information,
Steve, SChilds938@aol.com, KC8HGK (formerly WA3HEO)

In almost all cases, tubes with the "A" suffix are direct replacements for the earlier types. Usually the A denotes an improved cathode structure that gives longer life and better uniformity and stability.
In the case of the 6AH6 and 12AU7, the A versions are definitely direct substitutions.
Good luck with the HT-32A. That rig is a real classic and was top of the line in its day.

Source record: 114469

Free for shipping, a Knight-Kit T-60 parts radio. And it is a "parts" radio.
It's missing the knobs and the meter, but other than that, it's mostly complete.
Some previous owner made a modification to monitor plate current instead of the
factory "relative output". I also have the cabinet for it.

Free for shipping from Chicago. I just want to get rid of it.

Please reply via private e-mail to jvercellino@sprynet.com

3916. Help with antique key

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-09 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <645i38$jhh@news.Hawaii.Edu>
Source record: 114470

Someone has given me a very old key with no identification. The most significant feature is an white ivory finger-piece (1.5 inches in diameter), which seems to be glued to a circular piece of wood. The base of the key must be poor-quality iron, for there are small cracks everywhere on base, and large cracks around the stress points (around the mounting screw holes); base is oval (shaped like the race track around a football field); the contacts do not line up - base contact is well forward of the upper contact - looks as if it was designed that way. Just as the contacts do not line up properly, so the spring is also sitting at an angle. (I know what you're thinking, but I believe this *is* the original armature - the upper and lower contacts are identical even though they're offset.)

By the way, the base measures 2 13/16 inches wide by 4 9/16 inches in length.

Does any of the above ring a bell as to maker and age.

Thanks in advance - hope everyone's weekend was fun!

Jeff KH2PZ / KH6

SIXERS have always been about $25.
People buy them - look at them - talk to someone in the next room or
to the house next door, and then put them away in the closet.

A Sixer is an awful piece if amateur radio gear that should be either
put in a museum or stripped for parts. But a T60, now that is a
different story! You can actually make contacts with one of those!

HOME AUDIO AMP (Needs repair) $65 or best offer

TOP LINE SANSUI G-5000 AM-FM HOME AUDIO AMP.

Was very expensive transistorized amp at one time.

METERS: Signal Meter & Tuning Meter

BUTTONS: Speakers A/B; Tone; Sub-sonic Filter; Audio Muting;
Loudness; FM Muting; Mode; Tape Monitor; 4 Channel
Line Adaptor, Source Tape.

KNOBS: Bass; Treble; Volume; Balance; Tuning; Selector of
Modes

MICROPHONE: Mic. Mixing Level Input; Input Phones/Mic.

This unit needs repair and is sold as is.

$65 or any reasonable cash offers considered.

Would consider a tube tester (Military or Civilian) in trade,
perhaps needing repair too.

Thanks.

REMOVE NOSPAM FROM EMAIL ADDRESS ABOVE BEFORE REPLYING!

Hello all,

I currently use a B-line but I'd like to upgrade to a C-line.

I'm looking for a good-to-excellent C-line, preferably with
at least a CW filter. Extra crystals and other accessories
nice but not essential. Must be in excellent working condition
on all bands, have full output and fresh tubes if at all possible.
Does not need to be 'mint museum piece with S/N of 0002' or
anything. Mods ok as long as they work and make sense.

Please email any offers to:

Save yourself the aggravation and sometimes high prices on these ballast tubes, and simply use a 6V6 in the socket. You won't notice the difference in any practical sense. The use of a 6V6 in place of the 4H4C is standard practice in these (and other) receivers.

Message-ID: <01bced14$39bdcc40$338cdccf@geoff>
Source record: 114539

The perfect generator to keep your boatanchors (receivers etc.) in top condition. The only reason I'm selling this one is that I have 2 of them and I'm running out of space in my shop. I'm asking $800.00 for this unit. It is in excellent electrical shape and the trim is about a 7.5 (some scratches on the aluminum trim). This is the commercial unit (phase lock and 1/2 digit) and it has option 3 (reverse power protection).

There is still a big difference between offering a piece of gear to someone for a fairand decent price and making an unreasonable proffit on something you dont have a use for. Especially since in a lot of cases people offer stuff for sale they recently got for next to nothing and have never used themselves. I remember not too long ago you couldnt give a T60 away....Collins is Collins...dont price everything else acordindly.

Gary

3938. FS: QRP Rigs

Newsgroup: rec.radio.amateur.boatanchors

About 30 years ago, my father built (if memory serves) a double conversion shortwave receiver. Think 1.8MHz and 455KHz IFs. Someone expressed interest, some months ago, that person still interested, or anyone else interested?

It used to work well, but now it's missing some tubes and would estimate about 85% complete (missing parts should be very common and easily obtained). Can't find the diagram, though.

At least cover shipping.

It's at my mom's house in NJ, will be there for Thanksgiving week.

Have Heathkit hw101 for sale, also hp 23 pwr. supply in other posting...
101 is in rather good cosmetic shape. Face is decent, case good, having
a few blemishes, no dents, large scratches, etc. Rig seems to be
complete, but sadly, it needs het. osc. boards..(well, not really the
boards, but the tuning slugs/cavities all seem to be cracked, split,
missing, etc). The drive control has come loose and will slide right out
(sorry, I pulled on it, was working ok!) missing one rubber foot, needs
new dial disc, powers up ok, can hear some stations barely on 80, so it
does kinda work, has finals, etc. What's it worth? $40.00?
Reply via email,
Thanks!

Hi,

I have a Heathkit HP 23 power supply for sale. Works great, has
switches for pwr off/on, dual voltage and pwr on lamp. In very good
cosmetic condition as well. Only a few blemishes but has some
'labelmaker tape' identifying the voltages switch. Mostly just glue
marks from tape, etc. Have 'homebrew' pwr. cord for HW 101... pretty
rough and not well made, but has proper connectors. will go with first
piece of equip out the door. See HW101 posting! Want both maybe??
Reasonable offers considered and uship! reply via email.
thanks,
Randy, KC8CPK

The only Drakes that use 9 mhz are the TR6 and TR4's. The R4,A, and B series receivers used passive filters. The R4C uses 5645 khz.

Gary

Depends on how you "look" at it..... :)

3967. Yaesu FT-101 Information Web Page !!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-10 00:00:00 UTC
From: aor@gteais.com
Message-ID: <879169360.6466@dejanews.com>
Source record: 114482
Cross-posted to:
rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.antenna

I have created a web page dedicated to the FT-101 series radios.
This span covers the original FT-101 in late 1971 thru the FT-101F
in 1979. All of the station accessories are described with
technical data. More info to follow as this page is still
under construction. 11/10/97

http://www.qsl.net/nw2m/ft101.html

I need your help in completing this task. Please check back
with this message for the latest updates and needs.

Needs: (I expect to be finished in Feb/Mar '98)
0. Scanned FT-101 photos/stations! (crop to 600 wide, JPG format)
1. Information and description on the FR101/FL101 twins.
2. Info on the FTDX-560/570 prior to the FT-101
3. Info on the FT-101Z and ZD radios after the FT-101F
4. List of Yaesu repair centers and folks who restore FT-101's
5. Someone with QST from late 1971 thru 1980 who can provide
issue/page numbers with cost information for the FT-101 and
station accessories. The last ad I saw was in 1980 (QST)for
the sole FL-2000 amplifier (as excess inventory).
I would like to know when each of the new series were
introduced and the costs.
6. Replacement and substitution parts. Ie, what is a modern
substitution fot the 3SK39/3SK40/406x7 MOSFET transistor
for replacement. Where can originals or subs be bought?
Where are final tubes found (6JS6C)? Costs, addresses.
7. Someone who can scan and convert larget tune-up diagrams
and cheat sheets into PDF files.
8. Comments and suggestions... (constructive please!) :-)
9. Any other FT-101 history that I am forgetting....

73,

Al, NW2M

I have a Heathkit SB634 Station Console. It looks about as new. I have not operated it, but I was told it worked fine, exceptiing the display has an intermitant mild flicker in the number one when dispayed by two of the digits. The same leg of the number does not flicker when it is a seven.
It looks about new.
I have a 14AVQ Hygain vertical. (50.00)
I also have a Ham-M and an HD73 rotors w/ control boxex.
I will sell the Ham-M for 150.00 and the HD73 for 150.00(has the mast mounting plate)
I am asking 125.00 plus shipping for the SB634.. I will take offers. tnx jeff

Triad TY-84 power supply transformer for sale, never been used, with original data sheet. This was the heart of many 1960's era power supplies. A handy thing to have if you ever need to build your own ps. $20. Also fs: 7 tubes pulled from bad tx. $40. All test good, except 5763 and 0A2, which couldn't be tested.

From: thompson@mindspring.com
Message-ID: <647dpb$cm@camel21.mindspring.com>
Source record: 114508

I keep noticing posts that get far afield of Boatanchors. Boatanchors are receivers, transceivers, transmitters, amps, and test gear that have tubes (fire bottles) and usually are pre-1970. Also included are old keys and tube accessories.

Posts for TS940's, antennas, and spam (all the newsgroups are getting those today...hopefully the sysops will lock them out) should go elsewhere. Remember if its not a boatanchor put the post somewhere else.

Have a National NC-100A receiver for sale for $125, you pay COD.
Needs very, very little restoring. It all lights up, but I have no
way to hook up an external speaker, or what ohms it would be. No dents
or pings, paper capacitors in great shape, faceplate shows very little
wear, needs more of a dusting & cleaning than anything else. Bakelite
knobs and everything else are in very fine shape.
If interested: 732-828-6950 8am-10pm 7 days.
The price is not negotiable, Money Orders only!

Has anyone got any photos of either the Wireless Set 88, 62 or 36 or
12 that I could get from you?

What about an R-108 receiver?

Any help would be appreciated for the CCF Radio Web Pages at:
http://www.mnsinc.com/bry/ham/ccfradio.htm

Regards - Bry, G3XLQ / AF4K

Message-ID: <648i86$9vm@camel21.mindspring.com>
Source record: 114513

Yes, the 75A-2 had a factory option for an FM board. The one in my radio is the 148C-1 NBFM adaptor unit designed by Collins specifically for the 75A-2. This is not an owner mod!!!

By the way, the radio also has the optional 8R-1 calibrator unit installed. Another Collins option. I forgot to mention it in the ad.

Have a 32S-1 physical condx. 8.5-9. Has an intermittent xmit problem that appears to be in the band switch. WE $200.00 plus shipping.

75S-1 in good physical condx. and works great in all modes except AM. Has been modified to receive RTTY in the AM positon. Collins RTTY filter installed, mod. can be reversed. Have original manual with changes on schematic. Inside needs cleaning, was owned by a smoker. $275.00 plus shipping. Take both, I pay shipping.

Also have a Heath power supply for the 32S-1, will take $75.00 plus shipping.

All three $550.00 I pay shipping. Please e-mail w4la@aol.com.
Thanks and 73's,

Todd / W4LA

I think E-bay is *GREAT*, mainly for selling items. It appears too
many people let their ego's overide their common sense at auctions as
I've seen quite a few bid more for an item (usually memory or CPU's)
than they could buy the item new for.

4013. WTB: Hallicrafters S-38 Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-11 00:00:00 UTC
From: "Christopher A. King" <cking4@ford.com>
Message-ID: <346892E4.A7C9B55C@ford.com>
Source record: 114428
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Am looking for a band selector knob and bottom pressboard panel
for a Hallicrafters S-38B that I'm restoring. These parts could
probably be from any one of the "original" models (i.e. S-38,
S-38A, S-38B, S-38C). Parts from the S-38E will not match,
as this model has a redesigned exterior.

I have an SX-71 chassis carcass, and could also offer in trade
parts such as the audio output transformer, IF transformers, some
mechanical parts, etc (all exterior cabinet parts, knobs, etc. are
already gone, except for the two glass dial windows... the power
transformer is also gone). Would even be willing to offer parts
and cash if someone out there has these two items.

Any assistance here would be tremendously appreciated... thanks
in advance.

C.K.

>auction ripp-offs!

You can't get ripped off any more through an auction than right here on the newsgroups! Nobody is forcing you to bid anymore than you are being forced to buy anything here.

The auction concept just allows the current market to define value rather than the seller. It is everyone's right to do either or not.

I have used internet auctions (both buying and selling) for over a year and have had no more problems than buying and selling on the newsgroups.

What is detrimental on the newsgroups is that East Coast people do have some opportunities to buy that are gone by the time the West Coast wakes up and vice versa. The first guy to respond usually makes the deal.

At auction, however, the person who wants an item more is usually the winner. Also, the auction's outcome is not known for a number of days, giving all participants a chance to compete for an item. The seller wins because there is a chance of getting a better price, and the buyer wins because he has determined the outcome and only bids what he is prepared to pay.

No type of forum gives a better guarantee... that is always between buyer and seller.

Under ideal circumstances you are correct. But, alas, internet auctions are far from ideal. I have successfully bought many items from live auctions but avoid the Net variety. Why? The problems already mentioned, such as misrepresentation and the inability to practically inspect the goods being sold.

It would help if the auction "house" would offer some form of insurance of representation (eg, the transaction must be unwound if a determination of misrepresentation is found).

4026. **ANNOUNCING** 5 *NEW* Reflectors

QTH.Net Digests and Archives (for subscribers)
k7on@qth.net

What about Digests and Archives?

A. Digests

All lists at QTH.Net have digests available.

You can subscribe to a digest and periodically receive the compiled
messages rather than individual messages.

All list digests are configured for a size limit of 40,000 bytes.
However, most of the files are around 16k to 30k. This is because
majordomo will NOT send a digest larger than the limit. If a new
message pushes beyond the limit, it sends the accumulated, putting
the new message in the NEXT digest.

If you are switching from non-digest to digest, you must unsubscribe
tentec and subscribe tentec-digest.

It is an entirely seperate subscription, but both digest and non-digest
subscribers are permitted to post to the non-digest list.

TO: majordomo@qth.net
SUBJECT:
BODY: subscribe tentec-digest
unsubscribe tentec

B. Archives

All messages sent via reflector are archived and are available for
access through majordomo.

You can send a command to majordomo@qth.net and in the body type:

index tentec-digest

and get a list of files that are available by request.

Here is an example:

>>>> index tentec-digest
total 116
-rw-rw---- 1 majordom 45 14169 Sep 2 18:09 v01.n042
-rw-rw---- 1 majordom 45 18100 Sep 3 11:27 v01.n043
-rw-rw---- 1 majordom 45 15322 Sep 4 14:11 v01.n044
-rw-rw---- 1 majordom 45 13490 Sep 6 11:15 v01.n045
-rw-rw---- 1 majordom 45 16382 Sep 9 18:39 v01.n046
-rw-rw---- 1 majordom 45 14823 Sep 11 08:40 v01.n047
-rw-rw---- 1 majordom 45 16872 Sep 12 01:04 v01.n048

To retrieve one of these files, send an email to majordomo@qth.net.

In the body of the message, type:

get tentec-digest v01.n048

The file will be emailed to you, automagically!

C. Archives on WWW

You may view the archives online.

Point your web browser to: http://www.qth.net/tentec-digest.archive

4027. Re: FYI: I don't do ebay

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-11 00:00:00 UTC
From: n4xy@bellsouth.net
Message-ID: <3468eca6.95043485@news.atl.bellsouth.net>
Source record: 114442

I believe it is completely incorrect to characterize ebay as being unreliable or a ripoff. You DO have to use a little sense about buying things... and there certainly is the temptation to spend more than you should for an item because you have decided you WANT it no matter what.... but don't blame ebay for such human foibles... I have gotten many, many awesome deals through ebay... mostly (in my case) because bulk electronic parts don't sell all that well, and it suits me just fine to get 3000 47 ohm 1/4 watt resistors, new, for $3.00 plus $2 or $3 shipping. Especially when there's usually several different items involved, and the postage gets averaged.

Yes, I've been bitten... but only through my own willingness to buy 1200 used tubes figuring the %age of good tubes would be better than it was. Now I stick to NOS tubes and read the types carefully for a minimal %age of TV tubes... but that said, I've gotten some nice deals that way.... so, like everything else:

yes... it's buyer-beware... but it's only when you start fooling yourself about the value of something that you've convinced yourself you HAVE to have, and you're going to bid it on no matter what... it's only then that you may get bitten... but it wasn't ebay that bit you... you bit yourself!!!
72/73 ZUT!!!

>Dale Wentz" wrote:

>I am looking for a CW filter for a Heathkit HW-101

International Radio has filters for all kinds of rigs, from old Drake and Heath stuff to the latest Yaesu/Icom/Kenwood. Their filters are usually 8 pole rather than the original 4 pole, and most are drop-in fit. Also they often make more bandwidths than the original manufacturer - most models are available in 250, 400, 500, 1800 and 2100 Hz bandwidth. The only disadvantage is the price; about $100 each, but they often run sales.

See their website at http://www.qth.com/inrad/

4034. WTB Modulator/PS Chassis for Clegg Zeus

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-11 00:00:00 UTC
From: thompson@mindspring.com
Message-ID: <648lrn$jvk@camel21.mindspring.com>
Source record: 114449

Gang,

I am looking for a modulator/PS for the Clegg Zeus. According to Ed Clegg, the Clegg Zeus (150W out CW/AM 6 and 2 meter transmitter) came in two chassis...The main chassis labeled Part 331 contained the transmitter and modulator/driver. The Modulator/PS chassis , part 332 contains the PS and modulator finals. If you have a spare one drop me an e-mail. Might even consider a complete Zeus, too.

Source record: 114450
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

I know that I have posted this a million times but here it goes again:

I would like to TRADE AND ONLY TRADE (this means please do not offer to BUY) the following:

Collins 75A1 and 270G-1. Cosmetically both are about an 8. The receiver does not produce a demodulated output hence needs work. Have the original manual (pristine).

Kenwood R-1000 rcvr. Very nice. Works perfect.

AEA MM-3 contest keyer. Excellent.

(2) HD-73 rotors. One rebuilt and not used since.

4-1000 tubes I have (2) but they are both untested

I would like to trade all or part of this stuff for a 75A4, 75S3B, KWM-2, 75S2, 32S2. Also consider a Ten Tec Corsair II, Omni V, or Icom IC-735 or 751A.

Thanks for the read.

Lane
KM3G

The HQ120X is a 1940 Hammarlund receiver that is probably worth $125
as stated. The VHF-152A is worth about $50...together you get $150 to
$160.

Cross-posted to: rec.antiques.radio+phono,rec.radio.swap,rec.audio.tubes,rec.radio.amateur.boatanchors

For Sale:

Hickok 533A - very clean condition, someone has painted the exterior all black but it looks very good. Works fine, has roll chart and copy of manual.

Hickok 600A - Shows a little wear, but still very nice condition. This looks to be the same tester as the 533A in a little smaller package. Has roll chart but no manual (will provide a copy of the 533A manual with this). Works fine.

Asking $65.00 each plus shipping from zip 93401

email: doragsda@polymail.calpoly.edu

My 1970 Collins catalog covers Symmetrical (SSB) filters up thru
F455T 150A, PN 526-9667-010 and Sideband (USB/LSB) matched
filter pairs up thru F455Z 24C, PN 526-9666-010.
Can I get a catalog that carrys on from here... or does
someone have a catalog and would quote specs for me?

Two of us are looking for matched pairs and would like to get
the specs on filters we find, as many sellers don't know what
the specs are...

>I've seen quite a few bid more for an item (usually memory or CPU's)
>than they could buy the item new for.

I have been buying a few things at ebay. Nothing much very expensive but just wanted to see how it goes. I agree that on many things it is really a sellers market. Why is that? Well, for one thing, I have noticed that several of the regular buyers, folks who care to spend "more than its worth" for various items, are foreigners. In the European market I understand that American antique radios bring about 4 times what they bring here, so paying twice what I think something is worth is a *real* bargain for them. I don't have to compete with the overseas crowd as much at stateside auctions, for instance(although several dealers I see are shipping to overseas customers), so the prices at auction are much lower. I expect to pay about $50 to $75 for the average 20's battery set at a local *radio only* auction, while the same set at ebay would bring $120 to $175. I haven't tried to make money this way yet but the time is coming. Right now I wanna keep everything I run across! Another thing which inflates the price somewhat is the bidding system. At a face to face auction I can keep bidding in reasonable increments until one or the other of us gives up. There is none of this max bid, time limit BS, which encourages you to put on much larger max bids than you would really want to pay. So far I have not been burnt on the conditions of things, although I have spoken with club members who have, and I suppose my time is coming. I have gotten some things which were not really quite what I thought they were, but that has been very infrequent, and always a result of my not asking enough good questions. Nobody has failed to answer a question honestly, but you gotta ask them to get answers! I think there is a place for ebay, especially for older or disabled collectors who have a hard time getting out. You just need to use some common sense. I have given some consideration to communicating with other buyers who I see bidding frequently on stuff I like. To arrange some gentlemans agreements, you know, "I'll stay off of X if you leave Y to me", etc. This works well at local auctions and there is certainly no ethical objections to it as long as everybody is up front and honest. The sellers might not like it too well, but hey! the marketplace is a battlefield, after all! Just my two cents.
John Heck

What evidence do you have that they intentionally sold the addresses?
Your e-mail address is visible to anyone checking out the sales on ebay if
you
have bid on anything. Likewise if you ever post to newsgroups. That is
one of the
risks of "speaking out" in public, or participating in an open auction.

4044. FS: 25 uH roller inductor for tuner, transmitter on eBay Auction

I am a nut for vintage tube-type ham radio (and hi-fi) kits.
Will pay cash or trade vintage gear for old unassembled kits like
Heath, Knight, Eico, Johnson, Dynaco, Scott, Fisher, etc.

I'm not a dealer, just someone who has fond memories of building
Knightkits and Heathkits many years ago.
regards,
Nick

Source record: 114377

UPDATE DUE TO RESPONSES.

WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE RECORDER

Due to the responses I received for the unit at $75 or best offer--after some thought I decided the best way to handle it was to take the best offer over $75 and set a deadline instead of going back and forth with each interested buyer. This will be the fairest way to handle it I hope & less inconvenient for potential buyers. I am posting this for those who have responded whom I have not gotten to yet.

There will be a deadline for offers and the highest earlier offer if equal to the later offer will get the unit. Honestly, I was totally amazed, because when I first posted the unit, I received few responses. It's a great high quality portable recorder, but I am amazed.

DEADLINE FOR OFFERS:

-- THE DEADLINE WILL BE SATURDAY, NOVEMBER, 22, 1997 AT 12:00 MIDNIGHT EASTERN STANDARD TIME. THE MINIMUM OFFER CONSIDERED WILL BE $75.00.

1. I will try my best to keep those posted that make offers as to what the highest current offer is while keeping the name and email address of that individual anonymous for privacy reasons, but I can't guarantee that I will email everyone on time to update them on offers. I will try my best. So if you're interested in the unit make your best offer if you wish at the outset.

2. I ask that if you wish to increase your offer that you do so by at least $5.00.

3. For those who have made current offers, you may wish to standpat with your offer. After all, some who make higher offers may not have the money when the time comes. In that event, the earliest person who offered the next lower amount will have an opportunity to purchase the unit.

4. If possible, I'll try to post to the groups the current high offer too as time permits.

WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE RECORDER

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age.

Mostly chrome or stainless steel case. Metal speaker grill has some light rust in parts that can be easily taken care of to make it perfect.

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Has no stereo microphone with it.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

$75 or best offer--plus shipping and handling which won't be much, because I'll pack it free.

May be interested. Does it include the 6L6, EL-34, 5791, 5881, 6550, and EL-84?

> Thanks,
> John KH7T

Hello John,

Older equipment is sometimes tough to put a price on. Prices of Heathkits, being kits, seem to depend a lot on how well constructed the kit is, and if they function the way they should.

As far as the 301/401 combination is concerned, I have seen them at hamfests over the past year for as low as $150 and as high as $300. In this newsgroup, they seem to settle between $250 and $300. a 401/303 combination brings more.

Hope this helps,

73

4060. Essay Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-12 00:00:00 UTC
From: "Edward, III Dickinson" <eddick@worldnet.att.net>
Message-ID: <64cgok$od4@bgtnsc03.worldnet.att.net>
Source record: 114386

The following table is contained in an article in October 1997 QST, 'Official Journal of The American Radio Relay League'. The article, "What's New About the FCC's New RF-Exposure Regulations?", by Ed Hare, W1RFI, is on pages 51 and 52.

Table 1
Power Thresholds for Routine Evaluation of Amateur Radio Stations

Band (Wavelength)	Transmitter Power (W)
160m	500
75m	500
80m	500
40m	500
30m	425
20m	225
17m	125
15m	100
12m	75
10m	50
6 - 1.23m	50
70cm	70
33cm	150
23cm	200
13cm and up	250

ESSAY QUESTION

Compare the frequencies aligned with lower power thresholds with those which may be useful to Low Earth Orbit satellites. Include in your discussion the implications of non-structured communications verses a potential preponderance 'organizationally prepared' information. Discuss the ramifications of this with the potential dampening of freedom of communication throughout the world. Additionally, discuss the idea of vertically integrated information processing entities dominating the RF Spectrum. References to other recent restrictions on the airways, may be included.

As you see fit, please post this 'essay question' where it may be viewed by Radio Amateurs and interested others.

'Only the Paranoid Survive'
- Andrew Grove

'The price of freedom is eternal vigilance.'

Source record: 114316

For Sale: The famous old wireless text by American Marconi/RCA engineer Elmer E. Bucher, "Practical Wireless Telegraphy" "A Complete Text book for Students of Radio Communication" This is the Revised Edition, eightieth thousand, copyright 1921 by the Wireless Press Inc. 340 pages of wonderful text, with many photos and schematics of period Marconi wireless transmitters and receivers. Covers radio fundamentals and then gets into transmitters, receivers, antennas, measurements, apparatus, direction finding, and a wonderful illustrated chapter on Marconi Transatlantic Radio Telegraphy. The cover of this original hardbound book is somewhat worn and shows water spots, and the upper half of the cover spine is pulling away from the sewn text which is intact. The first page and inside cover are signed and stamped with the previous owner's name. The rest of the 340 pages are in very good condition -- no marks, all pages intact, and no musty odor. It's quite usable and presentable as an historic text for a wireless reference library as it is. $56.00 postpaid to any address in the continental U.S. Email Rick WA6NCX at remler@LL.mit.edu

I agree with Jeffrey. There are three Boatanchors lists. Do we really need three? Look at the archives and see the extent of the traffic on them. Some have virtually none. I am all for lots of lists, even started the R-390 list which is pretty busy. We have generated 14 digests in three weeks. There is a lot of interest in these receivers so the R-390 list fills a specialized need. But I hardly ever post to it - just read it and learn.

There already exists a fine tower list ("Tower-talk") - why create another?

One used to feed their ego by being a control operator of a repeater; now one instead becomes the listowner of dozens of unread lists which duplicate already existing lists.

I have an excellent HQ-180C (clock) with the speaker (rare) which I would part with for $350.00. I am in Northern California so shipping might be a factor. The 'A' just meant that they had replaced the tube rectifier with a solid state diode type. Other than that I don't think there was much difference. This was near the end of the Hammarlund/Hallicrafters era and people were starting to buy junk from Japan based on price, not quality.

Very good condx. Works perfect. Used as a "remote vfo" with an old TS-830 for a while. Covers AM broadcast band to ~ 30 mhz. have manual. receives LSB-CW/ USB/ WIDE AM/ NARROW AM. A serious SW or general ham band receiver. Don't need it anymore because I have a rig with a gen. coverage rcvr. and multi vfo's. $325.00 shipped CONUS. Trade for Collins gear.

I think that size and weight may have been a factor as well... I think that the market in general was drifting away from the idea that "massive in the modern manner" was necessarily better. Or everyone's arms were getting tired, mabye. R.L. Drake was already starting to produce smaller, lighter equipment around this time as well.

Remember that scene from the movie "1941"? "We have to figure out how to make these things smaller..." :^)

In fact, about two years ago, I bought a 4H4C from Antique Electronics Supply. It arrived with some other tubes even though they said over the phone that they didn't have any. I suspect they have more, but they'll have to search. The instruction manual (at least the one for the NC-300) lists a more common alternative tube you can use until you find a 4H4C.

So how much can I buy yours for, Mr Bear? I've wanted a 75A-4/KWS-1 pair for several years. If you want to sell your pair for a more reasonable price, I'd be a sudden cash buyer. I'd pay the $3500 for a nice set but I can't without making the kids go hungry; maybe you have the solution. How nice is your set? I wouldn't mind doing a little repair work on a set that had potential. Can you post a description of yours?

How about you, Bry; how nice is yours and what would you consider a reasonable price for them?

C'mon, guys, don't hold out, put a price on yours!

Very best regards,

Travis N5AY

Try Dan at djn@goodnet.com

He cleaned and calibrated my TV7, did a GREAT job. I think it was $40 or $45
plus postage each way. He was extremely professional, and provided a
detailed list of work done and calibration results.

I wish I had just sent it to him when I first got the tester!

From: Rick Riverman <rbriver@cybcon.com>
Message-ID: <01bcf0b8$590b6920$524c93cd@groucho>
Source record: 114323

Hallicrafters S-40a 1947 model, dark green finish, green dial indicators, new filter capacitors. Paper capacitors replaced with ceramics, new power transformer, new tubes. Good finish. Restored and tuned to work well. Includes the original manual set (a little yellowed after fifty years).

This is a nine tube rig with RF amplifier and BFO. Does well with AM, CW and SSB. It was the middle line model in 1947. The S-38 was the cheapie and the S-42 was top of the line, rare and expensive.

$85.00 + ship C.O.D.

I have a very nice Kenwood SP-820 for sale. This is the matching speaker for the TS-820S, but would also look good with the TS-830S transceiver. I'd like $70 plus shipping, or would consider trades towards something of interest.

I won't require a kiss or even roses...just price yours reasonably, Mr Bear...what do you think they should be worth? I mean, go easy on yourself, I don't expect you to sell yours for much below market, but it sounds like you want to sell yours much more reasonably and I'm over here chomping at the bit to buy them; why won't you post a description of the condition of yours as well as a price? I'm sure they'd sell right away.

It sure is frustrating to want to buy something and the guy that has the market cornered won't turn it loose. I've wanted a 75A-4 and KWS-1 for a long time, and you're not even willing to put a price on yours! You could at least tell us about them; what kind of shape they're in, how much you enjoy using them on the air, that sort of thing.

Or maybe you'd be so kind as to let me know where you saw a set more reasonably priced lately? While you're at it, maybe you could help me find a '67 Corvette 427/435 horse roadster...black or red, please...I'd be willing to give $10,000 or even $20,000 if it's perfect! Heck, that's 4 times what it cost new. 'Course, the last one I had brought $135,000 (not to me, unfortunately.)

I'd sure appreciate any help you can give me on the Corvette and the Collins gear as I like both. With you to do my buying, I can have some nice stuff and get rich both! Is this a great country, or what!

Travis

I am in need of a Collins 516F2 power supply. It must work but
appearence means nothing to me, maybe one without the cabinet or needs
cosmetic help. Also need an S line cabinet, any condition considered, even
dented or bent. If you can help me or know of a source, I'd appreciate
hearing from you. John N0EE

Nice.

There are 83 counties covering 56,809 square miles in Michigan, with nearly 200 towns and cities withs populations over 5,000. One of the largest freshwater lakes in the world bisects the state.

Let me guess -- Hamtramck?

Hi all:

Just a quick note to let you know we've moved! We maintain a
redirector, so the old URL will still work, but you can find us on
QSL.net now. A link is at the bottom of this post. Stop and give us a
look and we'll be adding more goodies in the coming weeks.

You can also find the Central Michigan Amateur Radio Club at QSL.net.
This Site will also be adding more goodies, so check in
http://www.qsl.net/cmarc

Thanks and 7-3,
Erv KB8TNQ

I've found through experience that many items in ebay are bid on for the first time by a new bidder in the last few minutes of an auction. Therefore, it's a waste of time to bid until the last few minutes. So write down the date/time of the auction close and wait until the last possible minute to bid. This is probably not fair to sellers, but if you really want something, it's about the only way to get it. Don't waste your time bidding and re-bidding for days, just to have someone slip in at the last minute and outbid you by $.50

4124. HRO-50 Redux

Newsgroup: rec.radio.amateur.boatanchors

From: "Christopher A. King" <cking4@ford.com>
Message-ID: <346C8A51.7BB5@ford.com>
Source record: 114339

Anyone have a suggestion as to the best spot on the back panel
of the HRO-50 chassis for mounting an SO-239?

With all of the other accessory plugs, inductors and such, it
looks a bit crowded as it is. Was wondering if anyone else
who owns one of these receivers came up with a good solution.
In the interest of preservation I would prefer not to remove
or otherwise permanently modify any of the components already
there.

Thanks in advance.

C.K.

I've never had an HRO but have spent a lot of time with VR tubes so here goes. First, the VR dropping resistor may have increased in value. Second, there may be an extral load on the regulated B+ line, such as a leaky bypass capacitor, or the rectifier tube may be tired. Third, although VR tube circuits look just like Zener diode regulator circuits, there is an important difference: To get the VR tube to "strike" (start to glow), the applied voltage must exceed a certain value which is normally several dozen volts higher than the regulated voltage. For example, a 0B2 (108 volt rating) needs about 150 volts to strike, but then it will operate at 108 volts. A properly designed circuit provides for this, but if the design is marginal, there may be situations where, if the VR goes out, it won't strike again unless you cycle power. The VR tubes almost always strike when power is first turned on, because the directly heated rectifier (5Y3, 5U4, etc.) heats up faster than the indirectly heated tubes in the set, so there is a period of relatively light load on the power supply, giving lots of B+ to start the VRs. Most gear with VR tubes will still work without them, only not as well - usually the oscillators will vary frequency with variations in line voltage and gain setting. All VR tubes have internal jumpers so that, if desired, the equipment won't work if the VR tube is removed. I suspect the set is wired this way for the S-meter amplifier because under some conditions, removal of the VR would slam the meter and possibly

damage it. Or it just may ahve been easier to wire the set that way.
I'd check the following:
1) B+ voltage (unregulated) and regulated with set operating normally
2) B+ voltage (unregulated) and regulated as set is turned on from a cold start.
3) Value of dropping resistor in VR circuit
4) Resistance of all bypass capacitors on regulated B+ line
5) Condition of main power supply filter capacitors

Hope this helps.

Here at N2EY, the main HF rig uses no less than 6 VR tubes. There are two regulated voltages for the various oscillators (+75 and +180) plus the regular +250 B+, regulated -45 for the grid of the final amplifier (derived from the difference between a 0C3 and a 0D3) and finally +300 regulated for the final amplifier screens. The rig is an all-CW, all hollow-state multiband transceiver, and together with the 866A's in the HV supply, you get quite a light show. Yes, 866A's are overkill in a 150 watt rig, but I like the glow.

Good luck & 73 de N2EY

4131. WTB: Peak Reading Power Meter

Need a peak reading power meter, prefer it to be able to handle full power (so it can loaf at 100-500w). 160-10 Meters.
I believe that the SWAN WM-3000 fits the bill, and would be preferred as it will match my Swan rig, but will consider most anything.

I prefer a trade, but cash is an option.

Hello BA'ers:

Tonight I made my first transmission on 2 Meter AM!! Thanks go to Paul Bocci K9NO, for supplying me with a couple of Crystals for my Clegg 22'er (Circa 1964). I picked up the Clegg 22'er at the Port Huron Hamfest this past summer...but didn't have any crytals for transmit...til Paul came to the rescue. My pal Al....VA3LX in St. Thomas, Ont. (about 15 miles south of me), says I was putting in a good signal...and the audio was superb. He was listening on a Gonset Communicator 3.

My setup here for 2 meter AM is the Clegg 22'er which puts out about 20 watts. I am using a cool Electrovoice 664 Mic as well. This is a special EV 664 mic I recently picked up from Kathleen Smith VE3WKW....who is also a collector of Vintage Gear. I already had a couple CHROME EV664's..but this one is Factory Painted GREY....and was supposed to be the "Non Glare Model"....This is the only grey one I have ever seen...anyone else have a grey one????
What makes this 664 so cool...is the base it sits on. The Base was custom made by a couple of Michigan Hams. It is an exact replica of the Famous EV 419 Base...except that it is made of Bronze, Is painted Black Wrinkle...and has a Red Collins Meatball Emblem molded right into the front of the base. This is without a doubt the "most beautiful looking Mic base I have ever seen"...the 419's are neat...but this is one step beyond.

So....now I'm kicking my butt for passing by all those boxes of 8 Mc Crystals at all the hamfests.....I'll be grabbing them now...so I can have a few extra freqs to play with on the Clegg. Think I'll dig the Old Heath Two'ers out and give them a try as well. There is about 3-4 locals here in the London area who are interested in 2 Mtr AM now...so hopefully we'll have a good group to communicate with.

I'm really looking forward to this little step back in time.......

I have had good results and found some good deals on Ebay.
I plan to auction some things myself.
I have no problems paying a reasonable fee to someone who
provides me a valuable service. That's only fair.

I think all the whining and gripping about having to
compensate someone who does a service is a smoke
screen for something less noble...like being pissed that
they can't ripe-off a newbie by offering $50 for their
51S1 anymore.

I believe you have a 5BRF and FTR. The 5BRF is (was?) a mobile converter designed to convert the 80-10 meter hambands to 1525 kc. and feed into the car BC receiver. Most of the car radios of the day could supply the minimal power requirements of the converter. The FTR is a fixed-tuned IF unit for the 5BRF. I believe it was meant for fixed station use. Put them together and you have a pretty decent receiver for AM and noncritical CW/SSB use. They are mid-50's vintage.

If you need more info I will comb my old QSTs. Sorry, don't have any manuals or schematics for them.

Bill,
I re-did the dial cord on my NC-300. I did not remove the front panel, rather I removed some of the mechanical stuff between the front panel so that I could use a pair of pliers to reattach the cord. I think that the chain tensioner was the part. Took some time to get the chain in the correct relationship! Can be done, though.

WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE RECORDER

Best offer in the $100 range takes it.

- THIS A GREAT COMPACT PORTABLE UNIT FROM EITHER THE LATE 1950'S OR 1960'S.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY UNIT.

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age.

Mostly chrome or stainless steel case. Metal speaker grill has some light rust in parts that can be easily taken care of to make it perfect.

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 track switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Does not include microphone.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

Plus shipping and handling which won't be much, because I'll pack it free.

I'll the best earliest cash offer in the above $ range by this coming Saturday, 11/22/97 12:00 Midnite E.S.T.

Thank you for reading this.

4170. WTB:More FT-243s

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-16 00:00:00 UTC
From: n1ddzrjc@aol.com
Message-ID: <19971116173401.MAA09053@ladder02.news.aol.com>
Source record: 114235

Looks like I need another large number (prefer lots of 100 or more) of FT-243 crystals (actually holders are the important part)

Any frequency will do. Found I do prefer the 3 screw type to the 2 screw on the bottom styles as it takes a larger, thus easier to handle blank.

Thanks again to those who helped previously.

Bob

>arc5@ix.netcom.com
>
Very well put, Dave! The thing I like about it is that it is fair
to everyone involved. Also the rip-off factor is diminished by the fact
there is a feedback section where a prospective buyer can see what others
who have dealt with the seller have to say after the deal is done.

People don't have to do eBay! Then again, they don't have to buy anything
either.

73,

Michael Crestohl, W1RC

4179. FS: Sencore Tube Tester

Newsgroup: rec.radio.amateur.boatanchors

Sencore Model TC162 Mighty Mite VII tube tester, with manual. Compact,
about 10" x 11" x 5", works great, with manual. Tests octal, loctal, 7 & 9
pin miniatures, sweep tubes, etc..
The case is in pretty bad shape, but it would be easy to make a wooden case
out of 4"x1/2" framing boards.
Price delivered in lower 48 is $35.00, via UPS.

Reply via e-mail to ab4n@erols.com

Thanks,

Sam AB4N

Message-ID: <346FAD2C.2843@accucomm.net>
Source record: 114249

Graetz Sinfonia 6 tube receiver chasis, no cabinet. Missing 1 tube. Condition is rough, operating condition unknown. This set would make a great conversation piece if restored. The front glass is broken on left side near the volume control. Has weighted flywheel tuning. Covers the following bands:

150-350 Khz, 550-1600 Khz, 6-18 Khz, 87-100 Mhz.

The set wieghs approx 15 pounds, measures 24" accross, 6" high, 8" deep. 7 pushbuttons located accross the bottom.

No manual or schematic. Lettering is in German on the front panel. This is strictly as "as-is" offering.

If interested, please E mail your offer to me direct including UPS charges.

Also, looking for a used SW-8 Drake portable receiver.

Thanks for reading,

Dan Langston

Test meter in a vey nice wooden oak box with hinged lid. Made by Electronics LINK Engineering. It says "Test Meter Unit Type 1410, Ser# 2209" for identification. It has 2 meters, 4", side by side on a black panel, the RHS is a galvonmeter, the left hand side has 3 scales, on a DC meter, 0 - 50 volts, 0-2.5ma, and 0 -1ma. The meter switch is 9 pos, and measures DC volts up to 500vdc, and currents up to 50ma. Has a leather carrying handle, and also has an 8 pin octal plug on a 3'cord to plug into some special device for testing purposes. It also has probe jacks on the panel, so can be used as a voly/amp meter. etc. Measures about 8 1/2 x 10 1/2 x 4". The box and panel face etc. are nice.

$20.00 plus shipping, $9.00

For Sale:

1) Hustler 6BTV all-band (60 thru 10 including 30M) vertical antenna. Used 1 month and then carefully disassembled and put back into original box. No damage, clean, works great. The wife just didn't like it sticking out of the ground in the back yard. $110 + Shipping.

2) Bencher BY-1 iambic CW paddle. Very good condition. $40 + Shipping.

3) MFJ-564 iambic CW paddle. Like new in original box. Chrome plated base, red paddles. $40 + Shipping.

4) MFJ-1272 MYV packet/microphone switch. This accessory allows you to have your TNC and mic hooked to the rig at the same time. A front pannel switch allows you to change between the TNC or Mic wit the push of a button. Also, the 1272 makes it easy to hook your KAM to a Yaesu without any soldering. Includes necessary cables. Like new in original box. $25 + Shipping.

5) B&W "Model 600" Grid Dip Meter. Excellent diagnostic and design tool. In very good condition. Includes coils covering broadcast to 240Mhz, wooden case, manual, spare tube. $45 + Shipping.

6) SURE 488T Noise Cancelling Microphone -- Transistorized hand mic that is FAA certified for Aircraft application (TSO-C58) Frequency response from 200 to 4 KHz. Low impedance dynamic (100 to 220 ohms) element. With Neoprene coiled cord and data sheet. Ready to be wired for your application. Used, but clean. $25 + Shipping.

7) TUBES -- Quantity of 96 tubes. 37 of them are in original tattered JAN boxes. Numbers like: 26C6, 6CZ5, 6DJ8, 6BL8, 6B8, 12K8-Y, 12SK7, 12A6, 12SQ7, 6J5, 12SR7, 6L7, 26V6, 26A6, 26FZ6, 26D6, 6AL5, 12AU7, 6AJ5, 12SA7, 12SJ7, 12SA7Y, and one (1) 4X150D transmitter tube. All tubes have been tested on a TV-7 military tube tester and found to be good. All 96 tubes for $40 + Shipping

Thanks,

Steve WA9FDZ (ex WB9KEV)

OK folks, we made a LITTLE progress on this!
I got pictures sent to me of the R1147A and a 12 Sender and a 52 set!

THAT ALONE is great progress and they are already up on the pages!

NOW, I still need pictures of WS31, WS88, 62, 36 and the R-108 etc.

How about adding to the list too? What other pictures of old rigs can
YOU scan or photograph with your Snappy or get a disk made when you
have photos developed?

This will help preserve the memory of these dear old radios for all
time if you can participate!

Thanks & 73 to all - Bry, G3XLQ / AF4K

See you on the CCF radio web pages!!

>Michael, W1RC
>mc@shore.net

Michael. In my opinion, your remarks about the Tower list may be fair,
but your remark about the Boatanchors group is out of line!

There are some people, myself included, who have expressed
disatisfaction with THE PORCH policy of takig large sums of money and
delivering a great list IF You don't mindsifting through TONS of
e-mail that may not all interest you. Some of us object to paying
for a list that costs very little to run. This has all been hashed out
before, and those of us who wanted a different type of group, have
switched to the TEMPE free BOATANCHORS group which is doing just fine,
thank you!

The moderator OFFERED To terminate this group, but scores of guys
wrote messages saying that they enjoy it and wish it to continue.

WHY do you want to spoil our fun by throwing rocks, I wonder?
Maybe I am stupid and just don't get it.

No malice intended, but let's not go through the same thing all over
again! Whoever gets it is welcome to his thousands of dollars, just
leave us alone if we want a free group please!

If the new reflectors aren't needed, they will simply die. Why sweat
about it?

Something about all of this is bothersome. Not that there are 8 bezillion lists (that I don't bother to subscribe to). Not that its just a lot of replicated resource on an already crowded internet. And not even that the same messages get posted to half a dozen lists and show up duplicated in my in-box on even the few lists I do subscribe to plus several newsgroups.

The real bothersome point is how one concludes it "costs very little" to run these lists. Do the good citizens of Tempe.gov know what their money is paying for? SOMEBODY is paying. In the case most of the lists (including the tempe lists), it just happens to be someone other than the primary benefactors of the lists. Would that all of life "cost very little" in the same way ....

Perhaps I could find someone to pay for all of my gasoline and road use taxes. Must be somebody out there dumb enough to do it ..

Grant/NQ5T

4211. Handbooks For Sale

Message-ID: <64q3a2$qqq@news.Hawaii.Edu>
Source record: 114278

For sale: Sencore TC136 Tube Checker. "Mity Mite IV" with 11 sockets,
5 knobs. Unit has complete set-up booklet (original). Unit is
offered AS IS, no guarantee. Unit doesn't smoke when plugged in and the
"CAL" function appears to work. Other than that, I dunno. Unit
is in fair condition, outer case a bit dirty and the handle has the
surface tarnish (i.e. light rust) characteristic of having been in
the Hawaiian climate. You must pre-pay shipping to your location
from Honolulu, ZIP 96813. Packaged up for shipping, unit will weight
about 10 pounds. Asking $25.00 + shipping (pre-paid).
Regards, Bob NH6XO

A friend of mine wants me to restore (to operating condition) a Hallicrafters S-38C. The markings are missing from the tube which a variable capacitor "wraps around". (i.e. There are two plates which pass by the front and back of this tube inside the radio when the fine tuning control is rotated). Could someone please look in thier manual and tell me what the number is of this tube? Thanks- 73, -Web in Myrtle Beach, SC

P.S. Please remove all the ! from my e-mail address prior to replying!

Anyone know what it takes to get a TS820 AUX band position to run on 30 meters? Obviously, a crystal and I think some coils are normally missing. ?? Any help would be appreciated. TNX KB8TL pierfelice @ MCI2000 . COM (remove spaces)

4220. Hallicrafters FPM-300 Safari

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-17 00:00:00 UTC
From: Pete McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <34711AE8.2838@MAIL.IDT.NET>
Source record: 114285

I was toddling around the hamfest this Sunday, when what do I see, an old Hallicrafters FPM-300, used to be called the Safari. Tune it up back home, and it works just fine, looks are an A+. Now, I do need one part for it, so if anyone knows where I can get some old Hallicrafters parts, please let me know.

Now, to the real point of this note... does anyone know anything about this radio? I bought it out of curiosity and to sit next to my Heathkit SB-100. Was it considered any good, junk, so-so? It has a 2.1 kc filter in it, hybrid innards, etc etc.

Any info/opinions/etc greatly appreciated.

Thanx -- Pete -- KA2YDY

>but your remark about the Boatanchors group is out of line!

Bry:

Why do you automatically assume that I am against the Boatanchors list on tempe.gov?

I subscribe to that list. I also read it. There are some good posts with useful information. There are a LOT of buy/sell posts too. But do we really need three such lists? Actually if you count "ot-rig" there are four. Why don't you go to the archives of the third "boatanchors" list on qth.net and look at the traffic volume? Then compare it with other similar traffic counts.

>There are some people, myself included, who have expressed
>dissatisfaction with THE PORCH policy of taking large sums of money and
>delivering a great list IF You don't mindsifting through TONS of
>e-mail that may not all interest you. Some of us object to paying
>for a list that costs very little to run.

How do you know how much it costs to run the list on theporch.com? Even if you don't believe in paying for the list you still have access to it, albeit a few days later, at no charge via the Web. Did you know that? I'll even tell you where to find it if you don't know the url.

>This has all been hashed out before, and those of us who wanted a
>different type of group, have switched to the TEMPE free BOATANCHORS
>group which is doing just fine, thank you!

Why switch when you can have both?

>WHY do you want to spoil our fun by throwing rocks, I wonder?

Who is spoiling your fun? No one but yourself. If you don't read the original Boatanchors-List traffic you have no way of knowing what you are missing. And believe me Bry, you are missing a lot. I read both lists and I know.

>Maybe I am stupid and just don't get it.

>No malice intended, but let's not go through the same thing all over
>again! Whoever gets it is welcome to his thousands of dollars, just
>leave us alone if we want a free group please!

We are quite lucky to have the tempe.gov list that Dave has been able to set up. That reflector also serves the COLLINS and HEATHKIT lists and is due to the good offices of the City of Tempe. In case you don't know Dave has used these lists as a training and learning device with the full knowledge and approval of the powers-that-be. But, as things change, so can the policy at that server and one day the switch may be pulled. I appreciate the efforts and generosity of the tempe.gov server but I don't want to be in a position that my favorite radio list is terminated due to a change in policy. I seriously doubt that will happen on theporch.com!

Do you have any idea how much time and effort it takes to run a mailing list? I think that the Boatanchors-List is worth every cent. Even if Jack and Phil are making a fortune (they're not!) I do not care. I get full value for my annual fee.

>If the new reflectors aren't needed, they will simply die. Why
>sweat about it?

Will they? If people keep cross-posting messages to numerous lists clogging up the Net they will just keep running. Look at some of the Usenet newsgroups - no one posts but they're still there!

This was a fun post, but one thing you forgot to mention was that there were two versions of the Invader.

At least according to an ad (I was barely born when it came out),the $619.50 had 200W PEP input. But there was also the Invader-2000, selling for $1229.00, which 2000w PEP input. Power input seems to be the only difference.

And you could get a kit that upgraded the Invader to an Invader-2000 for only $619.50.

This was in the May 1961 issue of QST. I just had this issue handy, and have not made a point of checking to try to see exactly when it was first advertised. I don't have a complete set from back then, anyway.

As for when the S-Line was released, the November 1958 issue of CQ has a four page color insert titled "Introducing Collins S/ line of SSB Amateur Equipment". COnsidering the splashiness, it makes sense that that would have been the first ad, though again I haven't made a point of searching issue by issue before that.

hello there,
Yes yes, it's the wrong newsgroup, but please hear me out before you start to write someting.
I'm an animation student and I am writing a paper on "adults and animation". At the moment I am trying to do some research and that's why I need your answer on these small questions.
Please e-mail me the answer because this message was posted to really a lot of newsgroups. You will find my e-mail adress at the bottom of the page.
Thank you very much for answering, and please don't even think about sending me something else than the answers, I won't take the time to read it anyway.
Brecht Cuppens

1 Which factors do you find most important in an animated movie, series, short,.....(choose three and rate, 1 being the most important, 3 the least)

1humor
2story
3visual style
4music
5Technique (3-d, cells, computer...)
6atmosphere (dark, heavy, comic, weird,....)
7dialogue
8quality of animation
9"adult content"(violence, sex, drugs,...)
10suspence
11realism
12subjects
13other (fill in)

2Which is your favourite animated movie, series, short,.....(only one please) and why?(choose from the above list)

3some personal info: age, sex , education, country

My answer would look like this:
1visual style
2storie
3humor
The Nightmare before christmas: visual style, quality of animation
20/m/university equal education(not finished yet)/Belgium

This shouldn't take too long and I kept it as short as I could,
so if you feel like it, you know what to do
thanks

see, an old
>Hallicrafters FPM-300, used to be called the Safari.
>Any info/opinions/etc greatly appreciated.

The FPM-300 was the last HF ham rig Hallicrafters sold. The "Mark II" version was called the "Safari". I've seen them in ok condition at hamfests for under $200. An nice rig, but nothing real special. They were manufactured as late as 1974. Check out http://www.aade.com/hampedia/hampedia.htm for details on this and just about every other ham rig every made. 73...

Collins 30S1 RF amplifier.
Condition: Appears to be all there except for the front door. There is a hole cut in the top cover over the RF amplifier tube (3CX1000?) perhaps was for a fan.
I have not and I don't intend to fire this thing up.
Could be crated for approximately $150 and shipped but prefer local pickup.
$900

4254. 51S-1 Cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-19 00:00:00 UTC
From: Mark Bryant <bryant@sohobusiness.com>
Message-ID: <01bcf48f$ed6437c0$161679a8@nimitz>
Source record: 114169

Hi boys and girls,

I am looking for the cabinet for the Collins 51S-1. I understand that the
30L-1 linear or KWM-2 transceiver cabinet will work fine. A rack mount
would also work.
ALSO, there was a company that was making replica cabinets and rack mounts.
While it is not original, it would do until I find the correct cabinet.

Thanks

mark bryant

4261. Idea for coil forms

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-19 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <64tub3$cd8@news.Hawaii.Edu>
Source record: 114176
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.boatanchors

For the homebrewers out there (or restorers):
I think I might have run across the perfect coil form to wind coils on: Plastic hair curlers. They come in a variety of diameters (as small as 3/16 inch), and are quite "airy" (they remind me of the minimal Air Dux forms).

The ones I have passed the microwave test (didn't heat up when bombarded with microwave oven RF).

Best of all, they're free for many of us... ("Honey, I'm missing some hair curlers!" "Oh, the cat was chewing on a few of them so I threw them out...")

73,
Jeff KH2PZ / KH6

P.S. ("Honey, we don't own a cat.")

4262. Does DeOxIT work?

Source record: 114177

I'm looking for feedback on the contact renewal product DeOxIT. I would like to restore the contacts on my various older rigs and am wondering if this product really works as claimed. I am also concerned that the film it leaves could absorbed by the ceramic or phenolic of a wafer switch. If this is a danger, then a precise application by a needle nose applicator is preferable to a spray dispenser. Another possible use for the product is the wiper of pots. Any experience with that application?

Dennis AE6C (dennis.monticelli@nsc.com)

Dennis: Yes! It is the elixir of life! It ranks up there with
WD-40 and duct tape as one of the pillars of our technological
civilization. Great stuff! I don't know about the possible
negative effects on the materials you mention, but I've sprayed the
stuff with reckless abandon through several Boatanchors with no
negative effects. Good luck.

I had a noisy audio gain pot on a Collins R-388. I put the
radio upside down with the wiper at the center of its range
(pointing down). I squirted liberal amounts of deoxit into
the pot. The fluid ran down the wiper I presume. I then
worked the wiper back and forth for several wipes to coat
the winding. The pot has been quiet for three years.

4277. Help with Racal RA17 T/R switching

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-19 00:00:00 UTC
From: Chris <chrisg@ducker.com>
Message-ID: <01bcf500$92fb9e60$29646464@comp128>
Source record: 114192

How does one do automatic receiver standby with a Racal RA17? Unlike R390s, other recievers, it does not have provision for "blanking" while transmitting.

Could anyone offer a good solution other than manually switching to "Standby" every time one transmits? A wonderful receiver, though.

Thanks in advance,
Chris KA8WFC

4279. FS HRO-500

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-19 00:00:00 UTC
From: Dave Heil <k8mn@clinet.fi>
Message-ID: <34733206.1FE9@clinet.fi>
Source record: 114194

I have a cosmetically nice National HRO-500. It's fully operational on all but the lowest band. The problem on that band is that two coil slugs were stuck. In trying to turn them, the coil form itself began to turn, breaking the tiny wires loose.

There are two knobs missing their chrome inserts.

Best offer over $400 gets it

4282. Sierra Model Z-99 Dummy Load/wattmeter for sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-19 00:00:00 UTC
From: bryan@prodistributors.com
Message-ID: <3473405d.18858040@news.nts-online.net>
Source record: 114197
Cross-posted to: misc.industry.electronics.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.antenna

I have a Sierra Model Z-99 Dummy Load/Wattmeter for sale or
trade. This is a commercial-industrial dummy load that operates from
50-600 Mhz, has 52 ohm terminated load. It also has a built in
wattmeter measuring up to 120 watts. This is ideal for using with
VHF and UHF transceivers. Will sell for $85 plus UPS

This dummy load/wattmeter is the style with the large
"radiator" style fins to maximize heat dissapation. This is a NICE
unit.

Hello Hallicrafter lovers,
I picked up an SX 42 in a BA trade this weekend. The good news is that it is all there, and it does work. the bad is that it is not pretty. The front panel and sides have rust on them and the bandspread plastic cover has a crack in it. In addition the tuning mechanism needs some work. But it fires up sans smoke and functions on all bands.
I am in the middle of a SX 25 restoration and do not want another project so I have several alternatives:
1.If someone wants it I will entertain swaps of all sorts (or any transmitter in most any condition.even parts units) However I am particularly interested in a clean NC-125 or Viking, (Am not saying it has to be one for one !) .I would like to see this go somewhere where it will be brought back to life.
2. However if someone has a good front panel I might be persuaded to buy it and take the project on myself later
73,
Carl H. Nord

A couple of years ago I posted on the old fido echo ham radio and had lost
it. I have had many requests for it
Thanks to N8BLK finding the last 2 posts in his archives here it is.

Marty, I only found part 2 & 3, when I checked, however hope this helps or
brings back some memories, I'm copying it into this message.

Hello all!

30 Meters transmit for the FT-101EE

The first thing is of course to unplug the rig (G). I grin at this but
I've
been bitten a few times and this mod can bite if the rig is plugged in.
You will have to remove the entire case. IE the top, bottom and wrap case.
(I call the wrap case the case that is left after both the top and bottom
are
removed). With this rig this is pretty simple. After removing the case put
the
radio on it's back all modifications are on the bottom. (All refrences will
be
frm the rig on it's back and facing you) Then remove the cover from the
tuned
circuits. It will be the large cover on your left with a bunch of holes in
it
This will expose the tuned circuits. You will notice 3 circuit boards with
mucho trimmer capicitors and the bandswitch wafers. This is where all our
mods will be made.

From the factory the WWV position shares the 20 meter tuned circuits in
the receive end. We will be removing these jumpers and adding components
to giove 30 meters it's own tuned circuit in receive and transmit.

The first thing we need to do is get oriented. We will call the first circuit
board (nearest to you) PB-1 the next one PB-2 and the last one PB-3. Yeasu calls
then PB-1188, PB-1187A and PB-1092 respectivly. I like my names for
simplicity. Also I will be refering to the band switch wafers by letters
starting with the one nearest to you as A, the next one as B etc ending with
M. I guess this would be a good time to give you a parts list.
This is the parts list from the original article. Liberal substitutions from
your junk box is allowed, as a matter of fact my parts list just vaugely
resembles this. As long as you can get close on the capicitance you will be
OK.

T1 & 2 2 79pf Trimmers rated at 250V for PB-1 and 2
T3 1 40pf Trimmer rated at 500V for PB-3
C1 1 50pf Silver Mica cap for PB-1 rated at 250V
C2 1 68pf Silver Mica cap for PB-2 rated at 250V
C3 1 68pf Silver Mica cap for PB-3 rated at 500V

Let's get to work. The first thing is to remove the jumpers connecting the
WWV setting with 20 meters. You will need to remove the jumper on wafers C and
E.
C is no problem but E is kinda tight. I would recomend removing E at the 20
meter tab and extending the wire to our new capicitors we will be
installing.

Now we need to install our new capicitors for 10mhz. On PCB-1 the only place
I could find to put T1 and C1 was between the upper right hand cap and the
mounting screw. Install the caps in parallel with one leg at ground and the
other leg going to switch wafer C at the WWV position. Install TC2 and C2
on PB-2 as close to the left edge of the PB as possible the same way
except bring the other leg to the wire you have hanging off wafer E.
Install TC3 and C3 on PB-3 on the side closest to you between the 2 mounting
points for the cover for the tuned circuits in the same way. You will have
to run a wire from them to wafer switch G. It is kinda hard to get to and
deep but it is doable (If I can do it anybody can, I promise).

Now the fun part begins (G). For some reason Yeasu left out the tab on
Wafer l and we will need one here. I scrounged my junk box for a tab
that resembled the one they had used and found one that was close.
You will have to do the same. Cut the new tab very carefully from the old
switch with wire cutters and cut away the brad on one side. Then
Super glue the new tab in the proper position on wafer switch I. After
the glue has set attach a jumper from the tab to the 40 meter tab
(the next one to the right with the cloth cover). All we need to do

now is put a tap on the final tank circuit for our new band. Go to
wafer M. We will be putting a wire from the 30 meter position tab
to the pi tank coil. Remove the 2 inductors that are in the way and
attach a wire in-between the 20 meter and 40 meter taps. (This should
be just below the nut holding the bandswitch together). Run
this wire to the tab on wafer M. Reattach the 2 inductors.
Now drill holes in the cover in order to reach the trimmers and put
the cover back on.

Now for the aligment. The new band will have to be aligned.
Put the preselector at 4 on the dial (Not 4 O'Clock). Go to 10.000 mhz
and load it up into a dummy-load as well as you can (Remember to keep
your plate current below 200 ma).Don't be fooled by the noise at 10 on
the dial. It is a spur generated by the rig and if you load up on it it
could damage the rig. Adjust TC2 and TC3 for the highest power output.
Then turn on the calibrater and tune for a S-meter reading under 10 and
adjust TC1 for the best S-meter reading.

Now you can put the cover back on. You should have as good performance
on 30 meters as you have on any othe band.

I make no warrantys for this modification. If you mess your radio up it
is not my fault. I have done this mod and It works great on my radio.
I cannot say the same about yours. You do this at your own risk.

Next week I add 12 and 17 meters

Hello All!
Putting the FT-101EE on 17 and 12 meters

Ok folks here is the last installment of my series on adding the WARC
bands
to the Yeasu FT-101EE. The only parts you will need for this are as
follows.

1 Crystal cut for 30.520 Mhz (for 12 meters)
1 Crystal cut for 24.020 Mhz (for 17 meters)
I ordered both from International Crystal out of Oklahoma City. but there
are many sources for these.

1 DPDT 12v relays from Radio Shak
About a foot of hookup wire (22 gauge multi conductor).
A small experimenters circuit board form Radio Shack.
A good pair of wire cutters and a lot of patience. (workng room is a premium
on this mod)

Before cutting any wires I did some experimenting and found that the rig would tune up on 12 meters from the 10 meter position and tune up on 17 meters from the 15 meter position.

So how do we go about inserting 12 and 17 meters without sacrificing anything. I decide to move 28-28.8 mhz to the 10C position and use it's slot for 12 meters. Then move 28.5-29 mhz to the 10D position and use it's spot for 17 meters. Then build a switch (using the relay) to switch the 28 and 28.5 mhz crystals with the 29 and 29.5 crystals using the clarifer
switch (I like the idea of the LED and it reminds me of my old Kenwood 830).
Then replace the clarifier pot with a combination pot and pull on switch and
maybe a new LED for it. I have not completed the switch part of the mod but you
get the Idea. It will work. It is kinda involved, but this is the only way I could figure out how to do it. I'm sure someone else has done it differently.
(I thought of many different ways myself) but this is the way it worked for me.

First as in my last article have the radio on it's back and facing you with the case comepletly off. I will be reffering to the band switch (S2 in the scematic) wafers as A to M starting from the front. This is where
90% of the mod takes place.

(Note this mod assumes you have a copy of the operaters manual and scematic)

Due to Lawsuits I must make the usual disclaimer:
This mod is only garranteed to work on my radio.
I make no warranties about its usefullness on yours. If you break your radio
you own the pieces.

Locate wafer C (3rd from the front). Study it for a while and familiarize yourself as to which tab engages which bands. Isolate 10B by cutting the wires between it and the 10A tab and the 10C tab. Then using some hookup wire jumper the 10A and 10C tabs. Now due to the 15 meter tab being buried on this wafer I elected to run a wire from the 10B tab to the capicitor on the adjoing circuit board. Run a wire from the 10B tab to Capicitor TC14 (do this under the circuit board and make sure you connect to the non-ground side.)

Locate wafer E. Isolate 10B just like the wafer C. It is a major pain in the butt to do but it can be done. Connect 10B and the 15 meter tab. Now due to the fact that 10C and D are so deep I elected to run a wire from 11 meter tab to TC5 instead of trying to jumper them on this one.(Take the same precations here as above)

Locate wafer H. Jumper the 15 meter tab with the 10B tab (It has nothing attached, so this one is easy.

Locate wafer M (The final tank coil wafer). Isolate 10B as before. Jumper 10A
and 10C. Run a wire from 10B tab to the 15 meter tab(It's kinda deep but do-able).

Well that's all for this side for now. Turn the radio over. and locate the
Het crystals in the front right hand side. Remove the 10C and 10D crystals. Replace them with the 10A and 10B crystals respectively.
Put the 30.520 crystal in the 10A position and the 24.020 crystal in the 10B position. Turn the radio back over to realign the 10 and 15 meters bands.

Realign 10 and 15 meters per the users manual. Put the case back on.

That's it! Except for the loss of 29MHZ. I plan to build a switch using the
relay to switch the 28 and 29 mhz crystals. Should be easy as one leg is grounded so all you need to switch is 1 leg per crystal. As I stated before I plan to use the clarifer switch and replace it with a pot with a pull-on switch. With some nice rub on numbers you could make it look factory.
(BTW Does anybody know of a good source for these in white? All I can find around here are black)

I am in the proccess of making many more mods to this radio to bring it onto the 90's. I can't help it. I'm a tinkerer. I'd rather work on my rig than
use it (Grin). I will be posting them as I get them completed.
(If there is interest)

Source record: 114205

Hi there,

I need a meter to complete my I-85A test set, used for ARC-5 bench testing.
It measures the 28v DC input, and should match the other 4 meters.

It is 3.25" dia (case is 2.5" dia) has 3 mounting holes, and has an off-white-scale.
The scale reads:
0-30 VOLTS DC
1000 OHMS PER VOLT
WESTERN ELECTRICAL INSTRUMENT CORP N.J. U.S.A
MODEL 301

If you could have a look in your junk boxes please,
I would be most appreciative.
Let me know your price.
Please reply by email

Regards
Ray

Hello all.

I am looking for a R390, R390A, or even a R391 to pair with my T-368
transmitter. Unit should be working, and in good cosmetic condition.
Front panel wear is ok.

Also would prefer the unit be within in a days driving frm Buffalo, NY,
or meet me 1/2 way. My preference is for a Collins or EAC unit, but will
consider all.

Covers a plus. Cabinet a definite plus!

Thank you...

Source record: 114209

I have a kit of parts and instructions to upgrade the audio from your SP-600. This non-destructive enhancement takes about 45 minutes to install depending on your level of technical ability and only involves changing parts.

$25 for the parts and instructions.

>for? What frequency does it cover?

In this receiver, (HQ-145A) this bandswitch position permits better bandspread on 20 meters (14 MHz). Set the bandswitch at 20 BS and the main tuning dial at the mark for 20 meters, and the bandspread dial will read correctly. It helps to verify the main dial setting with a 100 kHz calibrator.

Keep those bottles burning!

Hi Dennis,

Great stuff for boat anchors and all signal contacts. I don't believe that stuff I have read on the internet that it can be absorbed in phenolic. I spray the whole switch and haven't had any bad effects. Good to restore pots too. Spray into the opening in the pot and rotate the pot full travel a few times.

Source record: 114084

3M/WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE
RECORDER

Best offer in the $100 range takes it.

- THIS A GREAT COMPACT PORTABLE UNIT FROM EITHER THE LATE
1950'S OR 1960'S.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY UNIT.

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age. Very impressive
compact portable high end unit.

Mostly chrome or stainless steel case. Metal speaker grill
has some light rust in parts that can be easily taken care
of to make it perfect.

- SIZE (APPROX.)

6 3/4" HIGH x 11 3/4" WIDE x 10 5/8" DEEP

- WEIGHT (APPROX.)

18 pounds (fan cooled)

- BACK PLATE INFO

DES. NO. 185,262

PAT. NO. 2,877,958
2,942,875

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 track switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Does not include microphone.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

Plus shipping and handling which won't be much, because I'll pack it free.

I'll the best earliest cash offer in the above $ range by this coming Saturday, 11/22/97 12:00 Midnite E.S.T.

Thank you for reading this.

Message-ID: <19971121112001.GAA29458@ladder01.news.aol.com>
Source record: 114087

Take a look at AF4K's website at www.mnsinc.com/bry/ham. There's an extensive list of suppliers, including several pages of crystal manufacturers. For FT-243 rocks, C-W Crystals in Missuri will make you almost anything you want. Their address is:

C-W Crystals
1714 North Ash
Nevada, MO 64772

For 40 meter FT-243 crystals, .01% tolerance, 32 pf load, they charge $6 each for 1-4 and $5 each for 5 or more. Add $1 each for .005% tolerance. Shipping is $1 for 1-2 xtals, $2 for 3 to 14 xtals, or by priority mail, $3 for 1-15 xtals. Their catalog/suggested circuits is $1.

Good luck

>=
>
>Bry, AF4K
>
>=======================================
Actually, it was not a linear amplifier per se. The Invader was a 200
watt PEP transmitter/exciter, that had its power supply built into the
cabinet. The Invader 2000 replaced the internal power supply with an
RF amplifier section, and the power supply went outboard. There was a
kit to convert the Invader to the Invader 2000, but Johnson also
distributed them as Invader 2000 units right from the factory.

/Mike KF4MQF...

SUBJECT: Needed - 6 Meter Conversion information for GE DELTA-S mobile
radio.

GE Delta-S transceiver, * 36-42MHz split *. Need board modifications
for:
1. To relock the VCO after programming HAM 6 meter frequencies
into it.
2. TX Filter modifications/tuning.
3. RX Filter modifications/tuning.
4. P.A. (RF Power Amp) deck modifications/tuning.
5. Low Pass filter (just prior to PL-259 attached to the P.A.)
modifications/tuning.
I'd rather not bypass (cut out) this filter.

Would like:
1. MAXIMUM channels available 'per mode' using a S-825 control
head. I have the
original (8 Channel) control head, a S-550 (16 channel
control head),
and a S-825 Control head (multiple 'modes' of HOW MANY
channels?).
Also have the software/hardware for programming the S-825
control
head
2. Pointers on how to program it using the S-825 control head
programming software/
PC interface. I HEX-EDIT "hacked" a 42-50 frequency file
into the 36-42 format
and programmed the control head but maybe there is

another (better?) way.
The software would not take any frequency above 52MHz
when attempting to
program a "36-42 split" Delta-S using the (undocumented)
Control-E override.
3. Information on factory rated Watts - power output for mobile
low band VHF Delta-S units.

4334. TM's for trade or sale

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-21 00:00:00 UTC
From: Tom Montgomery <monty55@ix.netcom.com>
Message-ID: <34763EE7.DED0D14@ix.netcom.com>
Source record: 114099
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Would like to trade all or some or sell some of the TM's and FM's for older Table model Bearcat or Regency scanners in working condition or for items that are in the scanning or shortwave listening areas. (radios, accessories, etc...) Will consider almost anything...These are the last of the books that were found in a box at auction. Thanks to all

who responded for the previous offerings and I hope that maybe someone can find a use for these below.

Monty

All manuals are in excellent condition

ITEM
QTY

TM 11-2050 dated Nov 1954 Test Set I-48-B and Ohmmeter
ZM-21A/U 2

TM 11-5985-284-15 dated Feb 1967 Antenna, Loop
AT-784/PRC 1

TM 11-5805-574-15 dated January 1971 Terminal, Telegraph
AN/TSC-58 1

FM 11-490-7 dated July 1986 Field Manual Military Affiliate Radio System (MARS) 3
(Everything you ever wanted to know about operating a MARS station !)

TM 11-6625-3146-14 Operators Manual for Modulation Meter
ME-505A/U 1
(Marconi Instruments, Model 2305)

TB 9-6625-2059-35 dated July 1987 Calibration Procedure for Radio Test Set

AN/GRM-114A (IFR, Model FM/AM-1100S) 1

TM 11-6625-203-12 dated June 1959 Operation and Org Maint for
Multimeter AN/URM-105 1
including
Multimeter ME-77/U

TM 11-6625-683-14 dated 3 May 1983 Operator through GS Signal Generator AN/URM-127 2

TM 11-6625-508-10 dated Sept 1962 Operators Manual Signal Generators
AN/USM-44

and
AN/USM-44A 2

Would really like to trade for the older scanners but will sell also.

All TM's are in excellent condition. (Look new, even the ones dated
from'59 and '62)

All TM's are 10.00 each
The MARS FM's are 15.00 each
The TB is 5.00

I will take the highest bid for all if you would like or will sell
individually if you don't have anything to trade.
(I would prefer to trade... more fun :)

Thanks to everyone who has purchased from the newsgroups. I have been
transferred to Cincinatti from here in CA and
will have more TM's sometime when I unpack next February !! I will offer
this batch until there is no more interest in them.....

Right Way, Wrong Way, Navy Way?

==========

Navy's Technical Records of 20th Century Destroyed

Associated Press, Washington - Naval Research Laboratory records that "chronicle some of the most significant technical achievements in the 20th century" were inadvertently destroyed by the National Archives. They were "pulped beyond recognition," the archives said Wednesday. The archives and the Navy blamed each other.
Fed into the pulper sometime last summer were 4,200 scientific notebooks and 600 boxes of correspondence and technical memos.
"The historical record of our nation's scientific and technological heritage has suffered a serious and irreperable loss," Read Adm. Paul G. Gaffney II, chief of Naval Research, wrote National Archivist John Carlin, protesting the destruction of the records.
Among the lost records, Gaffney said, were the correspondence of American pioneers in high-frequency radio, work of the inventors of radar "and the war records or the application of these technologies in the campaigns against Nazi Germany and Japan."
Also lost were records of "path-breaking acoustic and oceanographic research" and materials tracing the early history of the American space program with V-2 and Viking rockets, records of Vanguard, the first U.S. satellite program, "and much more," Gaffney said.

4337. Trade: Vibroplex Iambic Deluxe keyer for Vibroplex Original Deluxe bug

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-21 00:00:00 UTC
From: Mike white <m_white@juno.com>
Message-ID: <01bcf68a$92b0a0a0$54b31d80@mm59049-pc.mitre.org>
Source record: 114102
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Hi. I'm going retro (putting away my modern transceiver and setting up a Hammarlund / Johnson station) and I need to replace my Vibroplex Deluxe Iambic keyer with a bug.

My Iambic Deluxe is in like-new condition, and includes a matching push-button panel with four buttons to control a keyer. The small panel attaches via screws on the bottom; the keyer is unmodified.

I'm looking for an 'as new' Original Deluxe bug. I'll swap straight up. Email if interested. Thanks.

Message-ID: <3475F48B.5DDB@ford.com>
Source record: 114107
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Found two of the three parts that I needed for the restoration of an S-38B, but still am in need of a speaker in decent condition.

Am also looking for a band selector knob for an original S-38 (though one from either this or the A, B, or C model should also match). Black in colour, and should have a small red dot for an indicator marker.

Thanks in advance...

cking4@ford.com

>That's actually not quite it. That list is run on a privately owned
>system and is "user" supported -- much like you support the repeaters
>you use (you DO support the repeaters you use, don't you??).

I will admit that I actually own a 2 meter HT for emergencies and the
occasional hamfest walkabout to communicate with friends on simplex.
However I don't have much use for repeaters.

>Other lists -- and I'm not being judgemental about it -- are supported
>by a local tax paying public who likely doesn't know its shelling out
>tax money to keep some bunch of ham radio geeks happy on the internet.

But you ARE being judgemental Grant,I noticed a thread farther down
the newsgroup where you took exception to the term"very little cost"
when applied to the Tempe list.

I'll explain again incase you missed it.

The Tempe server probably does a number of tasks ALONG with hosting
the listserver software......
the cpu probably has a few clock cycles to spare.....
and already has an existing connection to the internet.
Hence the term "costs very little"

I wont go into multitasking as the OS you use is Windows NT.

>Oh, well. I subscribe to several of the BA related lists -- the ones
>payed for by the good citizens of Tempe Arizona, the ones paid for by
>the guy who advertises that he is the benefactor (guess he wasn't loved
>enough love as a child ...), and the one paid for by the subscribers.

I'm not familiar with the "benefactor" so I can't comment,however I'm
sure the "good citizen's of Tempe" don't shell out to much to keep us
geeks happy.

In fact I'm also sure that a couple of the "good citizen's of Tempe"
enjoy some benefit from the list,otherwise it wouldn't be there.

Grant,do you have public libraries in your neck of the wood's?
In my town the libraries have computers with public access to the
internet.

I'll bet your town does too,supported by YOUR tax dollars.

>While they all have their merits, if I had to pick only one, there'd be
>no question that the guys with the audacity to think the users ought to
>support it is by far the best BA resource on the net.

And I can read the technical posts on the list reflector a couple of
days later.WITHOUT PAYING!

What I cant do is try to make a fast buck by buying and reselling
vintage amateur radio equipment,because someone has already responded
to the post.

My loss,oh by the way I don't think the individuals who do this have
the BEST interest of the hobby at heart.

Also having read a bit of the Tempe list archive I noticed a number of
postings by you.

I don't understand why you post to the list AND complain about the
"good citizen's of Tempe" being cheated out of tax dollars.

Possibly you have some other agenda?

Regards,

Barry/WB3AFH

Hi All,

Posting for a friend (Curtis, KK4HJ), who has a Collins 51J4 receiver for sale. He would like to know:

How to tell if the unit has mechanical filters installed (where to look, what they look like, etc.);

What is a fair asking price for this radio in good to very good condition, with and without the mech. filters ?

Thanks for any info!

I can't remember where I saw it, but in an old magazine there was a picture of a Japanese HRO clone. I think, but I'm less certain, that there was a picture next to it of a German clone.

I wish I could remember where I saw it. I know that there was nothing more than the picure and the caption.

Based on that, I always assumed the clone(s) were direct copies of the original. It would be interesting to hear how close they were, and certainly it is a vital bit of information to you if National HRO coils will work in the Japanese copy.

The only place I can think of that might have mentioned something about that is that history of the communication receiver (I can't remember the exact title) by Ray Moore. For some reason, I though he worked for National when the company was still in existence. Somebody reading this might be able to check for this for you.

So you weekly spam r.r.a.b. (ok, maybe one post a week
wouldn't agree with the O.E.D. definition of spam) with your
commercial ad for SP-600 dials yet you castigate other
spammers. Life is full of ironies isn't it?

Also, you might check your settings in whatever app you use
to post to Usenet. My app placed your correct e-mail address
in the email reply. I didn't need to de-spamify your
address. Since I didn't need to de-spamify it, spambots are
probably able to retrieve it correctly also.

Source record: 114124

Hi Fellas;
I have for sale the same Collins 75S-1 that I listed before. There were interested parties but they lost interest, I guess because I could'nt answer thier questions fast enough. The RCVR was packed away.
It has the WATERS Notch filter mod w/ paperwork and manual for the rcvr.
Has the wrong feet and the lid has two hole like the kwm-2 has for the hold-down zues fasteners. At first it appears to be a kwm-2 cabinet but there are no holes in the sides for the PM-2 supply holdon screws.
Front panel has no marks but is dusty, rcvr plays fine.
All the paperwork is there, needs an easy cleaning of the front panel. Just a few little chips on the bezel(trim ring), wrong feet.
I don't suspect that it would take 1 hour to clean it up, replace feet and it would look darn good.
Thanks for your patience and 73.....Rich WA2RQY

Yes, this was/is interesting. I subscribed and read it for a while, but got to the point of just skimming, and sort of noticed the notice of the charge, but didn't take it too seriously. So when I got an official notice, I thought they were kidding, and me and somebody in charge had a bit of a heated private exchange. Of course I unsubscribed -- hadn't been reading it in depth for some time, so why pay? :-)

Supposedly, said this correspondent, "this is the trend" as universities and such traditional listservs want to recoup their costs. That was a few years back, and I have yet to be hit by fees for about five other lists I subscribe to. Some fast-moving trend, eh?

My suggestion is to all who read this post:

I make a strong suggestion to send off a letter to your congressman/senator in order to investigate this mess. I don't know about any of you but the reason why I am in boatanchors is to preserve our link with the past. Whoever this nitwit is who had the documents shredded and pulped deserved to be relieved of his or her duty. We lost a large part of our documented technical history due to this incompetence. Cal, N6KYR.

3M/WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE
RECORDER

Best offer in the $100-$200 range takes it today 11/22/97.

I'll the best earliest cash offer in the above $ range by
the end of today, Saturday, 11/22/97 12:00 Midnite E.S.T.

MAKE AN OFFER--YOU MIGHT END UP WITH A VERY NICE UNIT!!!

- THIS IS A GREAT COMPACT PORTABLE COMMERCIAL QUALITY UNIT
FROM EITHER THE LATE 1950'S OR 1960'S. WOLLENSAK MADE
HIGH QUALITY EXPENSIVE UNITS AS WE ALL KNOW.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY UNIT.

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age. Very impressive
compact portable high end unit.

Mostly chrome or stainless steel case. Metal speaker grill
has some light rust in parts that can be easily taken care
of to make it perfect.

- SIZE (APPROX.)

6 3/4" HIGH x 11 3/4" WIDE x 10 5/8" DEEP

- WEIGHT (APPROX.)

18 pounds (fan cooled)

- BACK PLATE INFO

DES. NO. 185,262

PAT. NO. 2,877,958
2,942,875

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 track switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Does not include microphone.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

Plus shipping and handling which won't be much, because I'll pack it free (the buyer will save there). Also, to show my gratitude to the buyer, I'll bring it directly to UPS instead of using a local private shipping store which marks up the UPS shipping costs 40% to 60% which is the practice for these stores in order to stay in business.

I'll the take best earliest cash offer in the above $ range by end of today, Saturday, 11/22/97 12:00 Midnite E.S.T.

Thank you for reading this.

AS I recall the TED is a shipboard VHF transmitter that was paired with
the RED receiver. We had a VHF and a UHF TED/RED combo on the
minesweeper I was on back in the 60's. AM voice, worked OK. but I seem
to remember that the antennas were prone to moisture problems and
seriously limited the range of the sets!

For anyone seriously interested in the history of radio and electronics in the US Navy there is a superb book called The History of Communications-Electronics in the United States Navy which was done by the Navy and printed by the US Govmt Printing office in hard cover. Library of Congree Cat. number: 64-62870. It is over 650 pages and contains detailed information from the inception of the Navy in the 18th century thru the early Cold War years. Moreover, it is a scholarly work and contains citational references to other important papers and documents most of which appear to generally available.

This book is sometimes seen in the antique radio book seller community in the 75 - 100 range and is well worth it.

Reminds me about an incident at NASA a few years back, where a contractor destroyed that last remaining set of blue prints for the Saturn 5. (that's the rocket that took men to the moon..... 27 years ago....)

Here's more food for thought... throughout the 70's, 80's and 90's, technical information has been stored on computers of various brands and operating systems, many of which are no longer supported or even in business. Magnetic tapes and floppies are being reformatted and reused all the time to save money... I'm quite sure historically important technical information is now being destroyed accidentally on a daily basis.

There could come a time where we become the most technically advanced society whose members have no idea how anything works or how to fix it...

Of course,.... we have not seen anything like that now.... have we?

4400. Hallicrafters S-53A- any advice?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-23 00:00:00 UTC
From: Michael Salmons <msalmons@voyager.apg.more.net>
Message-ID: <65a175$d1$1@news.more.net>
Source record: 114026
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.audio.tubes

Hello,

I have a Hallicrafters S-53A in pretty good shape. It has all original tubes (which are still working well, I think). I have had to replace the speaker, but that's it. I would like to upgrade some parts to improve its performance in general, and its resistance to drift and an increase in sensitivity, specifically. Is this a feasible goal with this unit? Can anyone suggest any upgrades or modifications to achieve this goal?

I am also interested in general info about this model- when it came out, whether its top or bottom of the line, etc. Any info would be appreciated. I really like the ergonomics of this model and am resisting upgrading to a newer radio.
If I should really be using another model from this period or style, I would be interested in that as well.

If it helps, in general, I prefer listening to the major international broadcasters and some tropical band stuff and live in the midwestern US.

Thanks!

Michael Salmons

Unfortunately the gov't has been put in a necessary austerity program and is reusing all sorts of storage media. Of course this includes paper. In fact it is noted that there has been an upsurge in the quantity of shredded paper sent to the local recycler. Most of this paper emanates from and around 1600 Pennsylvania Ave. One office supply shredder salesperson has seen a commission increase of 1000% of late!

4406. 40 Meter "relocation at WARC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-23 00:00:00 UTC
From: Sandy W5TVW <ebjr@postoffice.worldnet.att.net>
Message-ID: <65b3s4$skp@mtinsc03.worldnet.att.net>
Source record: 114032

Hello Gang,

It is not too early to get things setup, so that the impact
of the future proposed 40 meter change will affect us minimally.
The proposed band change if to shift from 7.0-7.3 Mhz to
6.9-7.2 mhz. Someone came up with a brilliant idea: Leave the present
7.0-7.2 subbands exactly as they are. (CW and 'phone allocations)
When the 6.9-7.0 segment is opened, let it be exactly like the 7.2-7.3
mhz segment it replaces.

This will allow "boat anchor" rig users and QRP CW users to
continue using their gear without modification. The "AM" window
that exists on 7290 and 7295 can shift to 6990 and 6995. These
frequencies can readily be tuned on most older VFO's that stop
at 7 Mhz. Everything I own has at least 5-10 khz of "leeway" on
the low end of the dial. This will keep EVERYBODY happy and create
the least disturbance of existing older and QRP gear. Most of the
"rice box" rigs can be opened up to cover the new segments easily.

If you like this idea, let's talk it up. 1999 or 2001 isn't
that far away. We need to twist the arms of those who will go to the
WARC conference so a minimum of disturbance is created! The shifting
of the whole band down (CW on 6.9 and up) would be a big disaster!
73,
Sandy W5TVW

The KWM-2 cabinet will work fine BUT there are two rectangular openings
on the rear apron of the cabinet. It is necessary to use a sabre saw
with a fine toothed metal cutting blade to cut away the area between the
two, leaving one long rectangular opening.

I want to buy any high end Hickok Tube Testers, specifically the 539A,B, or C. Also, looking for TV3, TV7, and TV10 military testers. TV7 can be in any condition as long as meter is good. Price accordingly. I'm specially interested in Hickok 539B and C. (Gone over Thanksgiving)

Thanks, Steve

Urban myth. The original blueprints are all still at the Marshall Spaceflight Center. This story makes the rounds from time to time, but it isn't true.

>Here's more food for thought... throughout the 70's, 80's and 90's,

They woukd be of little to no use in the ham radio world, seems to me that AM on 2 meters is no longer legal, even if that is incorrect I know of no AM ops on 2 meters.

They may be of some interest to guys who would like a cheep radio to monitor the aircraft bands. I know a few guys like that, what would they cost, and also I would guess they require 24volt DC? is that correct. If so that would turn off a few guys. Please let me know and maybe I can help you sell a few....

Hi Zanki,

Murphy was an English Company.
The B40 and its variants (B40A, B40B, B40C, B40D, B41, 62B)
were made for the British Navy.
British Commonwealth countries had
the recievers as well, Canada, Australia, etc.

Regards
Ray

Its been too long since I had one to remember the IFs with certainty. I believe it does use the same IF and filters as the HF line though. The SB500 was the 2M transverter. It can be set up to use either a 50 or 28 MHz driver so be sure to check that if you find one. I am not aware of a VFO specifically made for the SB110. I believe it has a 5-5.5MHZ VFO so that one made for the HF line would work but might tune backwards.

The SX-99 has 8 tubes, covers 538 kc to 34 mc. IF is 455kc. Bandspread on 80
through 10 meters. ANL, crystal filter, antenna trimmer,
2 position selectivity control, and s meter. External speaker.
5Y3 rect, 6k6 audio out, 6SC7 bfo and first audio, 6H6 det, avc, and anl,
6SG7 ist if, 6SK7 2nd if, 6SA7 mixer and osc, 6SG7 rf amp. Looks a litle
like an 88 but much cheaper rig.

Message-ID: <3479E07C.53D2@wwisp.com>
Source record: 114057

I have a question for all of you Johnson Elmers out there! I am a Johnson collector. I bought a ranger about 5 years ago for $45 the ham told me that it worked it did not after pulling the manual out I found out that this ranger had a mount missing. It has 2 tubes on it small. In the manual it is located (if your facing the front of the transmitter) on the left side (ch13 keyer plate it is labled with v-13 6al5 and v14 12au7) Is this the push to talk system. I have seen one other one without this plate. All this time I thought of this radio as a parts ranger. Can anyone help with this?
Thanks
Randy ke4yzn
Ps I am looking for the kit manual for asembaling the ranger 1.

Are there any mods for the old Pro-42 scanner that Radio
Shack used to sell? I'm giving away my old one to a friend's son
for x-mas, and want to spiffy it up. I'm mostly looking for how
to remove the gaps it currently has to allow it to cover
everything between 30Mhz and 512Mhz, or at least add 66Mhz -
88Mhz to current freqs without loosing any. And, if it's possible
to increace the scan speed without sacrificing quality.
If anyone has any info on this, please e-mail me.

Remove the second, anti-spamming N from the
end of tdragon in my address to respond,

I am looking for a tank coil to complete
repairs on my old ranger. Could also use
a front panel in good condition.

Thanks much,

Don Ferrill K9TWO 317-788-7810

>>Any info/opinions/etc greatly appreciated.

I bought a new FPM-300 Safari from AES in 1975. It was a closing out sale of Hallicrafters equipment as they were going out of business. Other than excessive backlash in the dial train it has been an excellent rig. From 1975 until a few years ago my job was Radar Programming in the Caribbean and South Atlantic and I carried the rig with me all over the place. Operated it from Andros Island (VP7DF), Grand Bahama (C6ADF), Grand Turk (VP5DF) and Ascension (ZD8DB). Worked DX I'd never imagined existed before with it. Finally got off the traveling job, settled down in Florida, and set up the rig in my study. About a year ago it stopped working. A friend gave me a Kenwood TS-820-S that had been sitting in his closet for eight years. I fired it up and it works great, so the FPM-300 is sitting in the closet. Someday I will repair it. When down in the islands I put an xtal in it so it would work on - ugh- CB (which is used a lot outside the US. If you need a schematic drop me a line and I'll send you a copy of mine.

I'm looking to buy a Hallicrafters S-38C in mint or near mint. Anyone have one they want to part with? Thanks. Rick VE9HF.

4459. wtb: Multi-Elmac Rigs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-25 00:00:00 UTC
From: DavidC <davidc@bit-net.com>
Message-ID: <01bcf959$0ee49c00$098a92d0@bitnet.bit-net.com>
Source record: 113974
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For whatever reason, I am fond of the Multi-Elmac series of rigs, so I am looking for any I can find for short money or trades. I have an AF-67 and PMR-6, and may have an AF-68, still looking for the following:

Multi ElmacAF-54Transmitter
Multi ElmacAF-68Transmitter
Multi-ElmacM-1050Power Supply
Multi-ElmacM-1070Power Supply
Multi-ElmacM-1071Power Supply
Multi-ElmacPMR-7Receiver
Multi-ElmacPMR-8Receiver

They do not have to be working, though that would be nice. They do need to be reasonably decent cosmetically, and pretty much complete electronically. For the most part they will occupy a special shelf in my station with occasional use.

Thanks for any reasonable offers, and for any leads.

> This will allow "boat anchor" rig users and QRP CW users to
>> continue using their gear without modification. The "AM" window
>> that exists on 7290 and 7295 can shift to 6990 and 6995

This in my opinion would be a mistake IF they really left the current band plan in place since the low end of 40 CW 7000 - 7015 is the DX window and AM sidebands - which would be invitable - would be most unwelcome - I say this as an AMer and CW op.

But, the idea of putting any phone band UNDER a CW subband is stupid and should be avoided in the first place - IF this 40 meter band shift really happens (and it would take several years at least to implement by the way) they should shift the entire band plan down to the lower band edge and keep the CW/PHONE alignment the same. This is good technical sense plus based on a premise that all divergent ham radio interests should make sure there is room for the other guy's interest and we all don't forget WE ARE ALL HAMS - AM'er, CW, Contestors, etc, etc. alike.

Source record: 113976

The ultimate boatanchor period. Collins KWT-6/URR-32 500 watt SSB CW-AM-FSK tranceiver. 2-30 MHz continuous. 6-foot rack, pulled from daily use this summer. Exc cosmetic condition. Complete, with ant.tuner, directional coupler/wattmeter, dummy load. Have fired one up in the past, it worked fine. These 2 (TWO!) units were being used in the last few months.
Want to trade for, in order of preference, Collins gear (older s-line, KWM-2, accessories), Fender guitar amp(s) (tube only), money, what have you?
These units would be pick up in Denton, Tx. only unless you can arrange all shipping, etc. They are 6'x2'x2', about 300 lbs.
Thanks, Walt WB5LJW

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Looking for documentation on Hallicrafters SX-43 receiver:
owner's manual, schematic, service info, Sams Photofact,
whatever I can get. Bought one of these sets at auction
last night as-is, with no documentation.

I'm sure I could get the manual from W7FG or HI Manuals,
but I'd like to try the less-expensive way first.

Will pay REASONABLE copying and postage costs (I specify
reasonable here because in the past, I've had folks offer
to copy 5-page manuals for me for a mere $20, etc).

That assumes the AMers will operate illegally of course. But in the real world
you probably have a point because some AMers will crowd the sub-band edge
too closely, or modulate too broadly.

>But, the idea of putting any phone band UNDER a CW subband is stupid and should
>be avoided in the first place - IF this 40 meter band shift really happens (and

>etc, etc. alike.

I'm not sure why it would be *stupid* to put phone below CW. It might be nice to
have one band where phone operators have the propagation edge. And it does
allow older equipment to be used on at least *some* phone and CW segments
of the new bandplan.

Though I'd tend to agree that splitting the phone sub-band is probably stupid
for a different reason. If we make two separate phone segments, we have four
band edges to avoid to keep our modulations within the proper sub-band. With
a single phone segment, we only have two edges to avoid. That probably nets
us the equivalent of two extra channels we can use for phone.

I think that inverting phone and CW might be the best plan of all. Phone
operators tend to use newer equipment in general (though obviously the
operators in this group are an exception), so having to get coverage of the
new 6.9-7.0 segment isn't likely to be a handicap (most modern equipment
can already do it with a clip of a wire or diode and a reset). Meanwhile, CW
ops will have 7.1-7.2 where their equipment is likely to already be able to
operate. AMers could have a slice in the middle of the new phone band, IE
right at 7.0, where their equipment will already tune, and where their sidebands
will certainly stay inside the phone sub-band.

This gives us two benefits. First, it gives phone operators a HF band
where *they* have the propagation edge for a change. That would be a

novelty, and a slight move toward fairness. And second, it puts the CW ops next door to the megawatt SW segment that their sharp receivers are most likely to tolerate. (Note this would be a good idea *today*, because the CW ops are most likely to be able to work around the SW broadcasters who give the phone ops so much trouble. With a separation of amateur and SW broadcast, the benefit isn't as large.)

Of course most of the world doesn't try to micromanage its amateur spectrum with discreet by mode sub-bands like we do in the US. We might consider adopting the same policy, or at least try to coordinate with whatever voluntary bandplans the rest of the world decides to adopt.

I own a SX100 and can only tell you about the other two rigs from what I have read in "Shortwave receivers past and present" - an excellent book. According to the book the SX-99 was made from 1955 - 1958 and sold for $150. It was general coverage, single conversion with 8 tubes - a lower middle of the line radio from Hallicrafters which is worth about $100 today. The SX-88 however was their top of the line 1954-1955 general coverage, double conversion with 20 tubes and loaded with features. It sold for $595 and is in very much demand today for up to a couple thousand dollars. Hope tis helps. ---- Steve N9ROU

The SX-99 was the last single-conversion receiver in the SX line. Later SX receivers were double conversion.

Depending on the model, $3200 -$5000. The price of the KW-1 would be in
the $25,000 - $28,000 price range today when the operative CPI since 1951
is taken into account. BTW, a Chevy, Plymouth, or Ford could be had for
well under $2,000. There is probably no mainstream ham equipment today
which sells for more than the lowest price car :)

I'll go along with anything that would seperate us from the international broadcasters. Worst case scenario should be that people with "boatanchors" would have to change probably 1 crystal in the heterodyne oscillator section by 100 KHz from it's present frequency. Probably wouldn't even need to retune the RCV front end at all.

Believe that the SB110A uses 3395, the standard Heathkit IF. Believe
that it uses the standard Heathkit VFO as well. I can check if you like
since I have the 110A and 500. The vfo does tune forward.

As you said the 500 can be set for either if. Mine is set for the 50
Mhz band. I have documentation for it as well.

Message-ID: <19971127004601.TAA15500@ladder02.news.aol.com>
Source record: 113925

Dont worry. You have a complete Ranger. You have a early
Ranger that does not have the little two-tube assembly containing
circuitry for a) grid bias keying and b) bias supply for the modulator. It
seems that many of these early Rangers were
made and somehow were mated up with "later" manuals depicting
the little subassembly I just described. Do not despair. The Rangers without
the sub-assembly work just fine...I had several
over the last 25 years. Wonder how they get the negative
28 volts on the grids of the 1614 modulators without the 6al5
bias supply circuit? Yours uses cathode bias...you should have
a 2-watt resistor from the cathodes of the 1614's to ground.

Try to conjure up an early Ranger schematic without the
keying tube or the bias rectifier...and you will see the light.

4511. Re: 40 Meter "relocation at WARC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-27 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19971127013301.UAA22166@ladder01.news.aol.com>
Source record: 113926

A really good topic to discuss!

It seems to me that the best thing to do is to just "slide" all the allocations down 100 kHz. Here's why:

1) Most "modern" gear can be converted to the new allocation by reprogramming, new EPROMS, etc.
2) Most "heterodyne" boatanchors (S line, Drake line, SB & HW lines, etc.) and most TenTecs can be converted to the new allocation by buying a new heterodyne crystal and perhaps a minor realignment.
3) The phone allocation will be continuous.
4) All "multiplier" boatanchors will be usable on phone without modification. If "low end" operation is desired, many of these rigs could use the 11 meter position (with suitable changes) or an external VFO.
5) The CW segment will stay on the low end, in conformity with all the other HF bands.

An important question is, will the 6.9-7.2 allocation be exclusively amateur worldwide?

4512. Re: Info About Hallicrafters SX-99?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-27 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19971127014201.UAA21340@ladder02.news.aol.com>
Source record: 113927

The SX-99 was as described in other posts (single conversion, 1 RF, 2 IF, xtal filter, Smeter, all metal tubes, etc.) It's a pretty good receiver for its vintage and price range. The S-85 is the same receiver, minus the Smeter and xtal filter. There were a lot of SX-99s made and they generally sell for $50-150, depending on condition. They were a mid-line receiver in their day.

The SX-88 was also as described (dual conversion, 2 RF, 3 IF, multiple bandwidths, S meter, miniature and octal tubes) but was the absolute top of the line in its day. It was the first receiver designed with SSB reception in mind. There were very few of them made, and even fewer survive today. They are worth whatever the owner wants - there are far fewer SX-88s than SX-88 buyers. They typically sell for quite a bit MORE than they cost new!

For Sale:
I have a large inventory of quality NOS tubes and a wide variety of radio related publications. Also available are radios, test equipment and misc. radio parts. My schematic service is the best price around at just $3 delivered for schematics and tuning info. Quality, tested used tubes are also available. If I don't have it, I'll try to help you find it! Hundreds of happy customers have used my service. Ask Rog42@aol.com for an e-mail copy of my latest offerings - list #1115-T

4517. HAMMARLUND PAINT?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-27 00:00:00 UTC
From: Rick Williams <williams@brunnet.net>
Message-ID: <347ced9f.0@news.brunnet.net>
Source record: 113932

I have an HQ-140X that I just had tuned up. The front is near perfect, however, the case is in pretty bad shpe. Alot of small scratches. I'm thinking of either having the case sand-blasted or else putting paint stripper on it. I have a friend with a body shop who can spray it for me. Does anyone know of a source for paint which would match what's on there already? Thanks. Rick VE9HF.

Hello all,
I recently acquired a small CW exciter with a single 807 in the final running at very low plate voltage..The tube compliment suggests that it was made in the 40's..The unit has a built in VFO,and was used as an exciter for a home-brew transmitter with a pair of 807's..
The dial reads Electro Mechanical MFG. CO. NY, NY. The model is VX 101 JR..Anyone out there know something about it?

Thankyou,
Jeff James

4542. FS AR88 Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-27 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>
Message-ID: <347E2052.3684@sympatico.ca>
Source record: 113957

I have a number of new unused AR88 parts, specifically labelled by RCA Camden New Jersey for the AR88D. The parts are still wrapped in the tissue paper and boxes. These parts are generic to the other RCA AR88s and CR91s, but part #s are shown differently in the manuals. Many of the part #s show in the AR88LF manual. The parts consist of IF transformers, air trimmers, ceramic tube sockets, rf gain controls, antenna, rf coils, bathtub capacitors, and misc. capacitors. Anyone restoring to original condition would appreciate these. The boxes contain several of the same part, so I cant give you the box, unless it is the last piece in it. If you need something, please give the part # and description. Shipping is extra.

I do not have an AR88D manual, but have the others IE AR88LF, CR91a etc. If anyone has an AR88D manual and would like to trade it for an original AR88LF manual I would be interested in hearing from you.

Thanks / Larry VE3RF

Krylon #1604 Shadow Grey spray paint is near perfect for the 100/145/160/180
models. I restored a 100 last year.

I bought the paint at a True Value hardware store locally. It is a standard
Krylon color.

If the 140X is the same grey as the newer units, the Krylon will work.

Source record: 113865

>Does anyone know the value of a National 101X? I have one and don't know
>how much to ask. Thanks Craig

Depends....

On version and condition among other things. :-)
At least four different versions I know of:
Version 1: Has tuning eye tube, no s-meter.
Version 2: Has s-meter instead of tuning eye, (later model.)
Version 3: Has *internal* battery power option, built in vibrator
power supply for use with 6V batteries.
Version 4: Battery version which needs 180V B+ & fil. power supplied
by *external* power supply.

Early tuning eye versions are a little more valuble than the s-meter
equipped units. Battery versions, (either type) are rarer but only the
internal vibrator unit is worth more. (Very few made.)

And condition, means more than the version. Some from memory, hamfest,
and boatanchors@theporch.com numbers:

Ratty but original, needs lots of work: $50
Fair condition, original, needs some work: $70-80
Good condition, original, needs minor work: $100
Very good condition, needs no work: $150
Like new, NIB condition, or restoration: $200-225

All above assumes no major missing or bad parts.
Add $20 for original (not a copy) manual if you have it.
Add $50 for matching *correct* speaker & enclosure.

Your milage may vary... :-)

Hi all!

I have almost finished a WJ 1140 system (old ESM set) and need a few pieces.

Helpful would be a 2-4 GHz tuner, and any demodulators. If you have any cables, great. Really, just about anything that says 1140 on it, particularly manuals.

Also am working on 1240 system, any parts?

Thanks

I Have an EPSON NB-SL/25 notebook computer I would like to trade for a
Yaesu FT101E or possibly a General Coverage HF digital receiver. The
following is a description of the EPSON:

EPSON NB-SL/25 Notebook Computer 9"x11"x2"
12 MB RAM
80 MB Hard Drive
VGA 640X480 Grayscale
386-25 CPU
PS/2 Mouse
Intel 400/E 14.4K Modem
2 extra batteries
Carrying Case
AC Power Supply
Windows 3.1
MS Word 6.0
MS Internet Explorer 3.01 for windows 3.1 (ready to dialup your ISP)

I use this system for writing papers and for field hookup to the internet.
It has been a good reliable system and is in excellent condition.

If you are interested, please contact me at rbriver@cybcon.com

Accordingly to General Electric catalogue dated 5/1946 (yes I know its
not the A-model):

6J5
General Description
Principal Application : The type 6J5 is a general purpose triode
amplifier designed for service as a detector, amplifier or oscillator
tube. Its electtical characteristics are identical to the type Gj5-GT
except for lower interelectrode capacitances.

Mounting Position: Any
Direct interelectrode Capacitances
Grid to Plate 3.4 pf
Input 3.4 pf
Output 3.6 pf
pin 1 Shell
Pin 2 Heater
Pin 3 Plate
Pin 5 Grid
Pin 7 Heater
Pin 8 Cathode

Maximum Ratings
Design center Absolut
Plate Voltage 300 330
Grid Bias Never Positive
Plate Dissaipation 2.5 2.75 Watts
Total Cahode curr 20 22 milliAmps
D_C Heater-Cathode voltage 90 100 Volts

Characteristics and typical operation
Heater Voltage 6.3 Volts 6.3 Volt
Plate Voltage 90 250 Volt
Grid Bias 0 -8 Volt
Amplificaion Factor 20 20
Plate resistance 6700 6700 Ohm
Transconductance 3000 2600 Micromhos
Plate Current 10 9.0 Milliamps

Notes:
The d-c resistance in the grid circuit should not exceed 1.0megohm,
under maximum rated conditions
Direct connection between heater and cathode is recommended

4556. 3865 - Cesspool of 75 Meters

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-28 00:00:00 UTC
From: deerrenee@aol.com
Message-ID: <19971128135900.IAA14976@ladder01.news.aol.com>
Source record: 113876

3865, the home of at least one boatanchor swap net, has turned into a real cesspool on 75 meters.

The main culprit is a West Virginia ham who almost nightly gets drunk and become an extremely vulgar and threatening bully. The only entertaining feature is that he LIES COMPULSIVELY, claiming things completely delusional in nature (he has an MD and three PhD's, he is a former CIA agent, etc). He turns on his so-called friends, cursing them and threatening to go to their homes and beat them up (why they kiss and make up the next week is hard to explain).

Of course he "founded" and "built" 3865, whatever that means. When he has been really drunk, he has threatened to kill people who have checked into one of the vintage-equipment swap nets on 3865. He is usually able to attract some other foul mouthed people to continue their diatribes late into the night.

WORD TO THE WISE: avoid 3865 and this guy's buddies like the plague. They are all a bunch of deadbeat losers.

4557. Info Wanted: Yaesu FL-50B & FR-50B (radio's that don't exist !)

Sure you dont mean a 6JS6A?? If so, it's a horizontal sweep tube, probably still available from most tube sources.

I am getting a dead Dentron GLA-1000 and am gathering info. to repair it.
I'd appreciate any helpful replies to the following questions:

1. Where might I find a replacement transformer, and what should I
expect to pay for it? (I am guessing that is what I will discover to
be
the problem with it.)

2. I read somewhere that some were replacing the 6JE6/6LQ6 tubes with
Svetlana EL509's - any actual experiences and suggestions? Cost?

3. I also read that, with a change of filament voltage, one may modify it
to use the MUCH less expensive (than 6LQ6) 24LQ6s ($7.50 - 14. vs
$25-35 ea) or 32LQ6s (unable to locate) . - comments and/or
experiences with this?

4. I'm running a 440SAT, is the input swamping resistor adequate for
input VSWR?

5. Anyone run Measures high speed switching parts kit for TX/RX
and VHF-Q parasitic suppressors on these amps? Comments?

Hi,

I've collected too many projects over the past 20+ years and time to reduce the collection. This receiver is too big and heavy! so....it's the first item on the list to go. It has been in warm and dry storage for 20+ years and will clean up to excellent+ condition. It's just dirty/dusty...no
nicotine. It works but i suspect it needs either new tubes or an alignment.
The "S" meter just doesn't seem to read as high as I would expect it to on loud signals. I have the original manual with it. The cabinet has original

paint with no scratches, dents, or rust. I haven't seen many of these receivers that haven't had the cabinets repainted. Anyway, it is local pick up or will meet someone up to 100 miles from Boston, MA. $125.00

A while ago I posted these to the Fox_tange (Yaesu) reflector and it generated some interest. One fellow agreed to buy both of them and some extra bits and pieces so I packed them up in one big carton with plenty of foam to protect them. Well, after quoting the shipping he backed out and so they are available once again, preferably aspacked because I'd prefer not to unpack and repack them separately.

One is a FT-101E and the other is a FT-101EE. They are missing several of the plug-in pc-boards, driver/final tubes, crystals and cabinets. Both units seem otherwise complete. There are a couple of boards with filters but I am not sure of where they go. Other than the above the two radios appear pretty complete. If you like to fix and maintain Yaesu FT-101Es these parts radios are a goldmine of good parts and bits. If you have a couple of junkers these may provide the needed parts to make one or both of these work. One has a cooling fan, both have power transformers and meters and most or not all of the chassis components, switches, knobs, nice front panels, etc.

I was going to sell them for $150.00 plus shipping so anyone want them for this amount?

That's probably a 6JS6A, used in Yaesu FT101B thru EX series
transcievers as the transmitter final amplfier (x2) and other amplifier
applications. Available but becoming increasingly scarce and expensive.
Try Antique Electronc Supply as a source.

Excuse me, I have been reading this threat now for two weeks. I have this machine and both the one before it, and the one after it, and yes it is a fine machine. But I bought the monophonic version for $35, the tube stereo version for $15, and the solid state stereo version for $5, with original manual, two reels of tape, and microphone still in the plastic bag. The original carton was with the last one.

$100-$200 is way out in deep space. Especially considering that these things were dumped on the market by the hundreds of thousands when the public school systems abandoned them in favor of cassette technology.

I can give you the name of a dealer that has 5 of them now in 9-10 condition all for less than $30 per.

Source record: 113818
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Can anyone advise me as to a fair value for these two units? I was considering offering them as part of a trade.

Also, if I don't trade the Sig. Gen. (just because I like the looks, is this still a useful instrument?

Gonset SuperCeiver, with two SuperSix tuning heads, control head, and an AC/PS. One SuperSix has one rear case corner cut away to fit in a VW Bug panel, the other one is OK. Everything probably works fine but needs sorting out and TLC. With manuals. Looks like all original knobs.

Signal Corps Model 172J Signal Generator, complete with case, lid, and manual. Dusty but otherwise very clean and works. Range 100 kc - 32 mcs.

4586. Need AVC help on Hammarlund HQ-110

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-29 00:00:00 UTC
From: m_white@juno.com
Message-ID: <65q2lj$c8p@top.mitre.org>
Source record: 113819
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I have real nice Hammarlund HQ-110 which I use in my 'nostalgia' station. However, the automatic gain control (Hammarlund calls it an automatic volume control, AVC) doesn't work on CW or SSB. As far as I can tell, that's how it's supposed to be, as the instruction manual specifies manual volume control for those modes. This is, however, a pain in the neck requiring constant adjustment of the RF gain control. Does anyone know how to make the AVC work in CW/SSB mode on this receiver? Thanks.

Mike, N4PDY

4587. WTT: SX-73 for Viking

Newsgroup: rec.radio.amateur.boatanchors

I have a Hammarlund Super Pro SP-400x that is the commercial version for sale.
It has the original power supply and original black crinkle cabinet. The
cabinet is
in very good cosmetic shape, there are three unoriginal holes on the back
near the bottom.
The front panel would have been in very good shape also, but has five
unoriginal holes that I put matching screws into. Has all the knobs. The
insulated part of the phasing shaft is missing, but I have the knob.
Now for the rest of the story, this radio works but not very well. It has
been heavily modified. All the tubes in the "if" section has been changed
to miniatures. The good part is the chassis was not touched, whoever did
the mods used hole adapters for the miniature tube sockets. There are some
other mods, but I have no documentation on any of it.

By the way you can see a picture of it on my web site, or go directly to
the picture by typing this:

http://www.communique.net/~kk5fe/super.gif

Remember this is a heavy radio. The power supply is about 30 - 35 pounds and
the
radio is about 50.
This is coming from zip 70435

I would sell for $150.00 plus shipping.

Thanks for reading,
Keith KK5FE

4600. WANTED: KWM-2A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-29 00:00:00 UTC

MAGNETIC SURVEY INSTRUMENTATION

Prices include shipping in Lower 48.

MEDA uMAG-02WB Handheld, battery-operated digital
fluxgate magnetometer. Sensitivity: +/- 0 - 20.00 - 200.0 -
2000 milliGauss F/S, DC-400 Hz (-3dB @ 400 Hz ref to DC).
Analog output +/- 2.000 V F/S. Linearity .02% or better.
Absolute accuracy +/- 0.5% or better, traceable to NIST.
With 10 meter cable and transverse probe, 6 spare batteries
in storage case, multiple-battery harness for up to 8
batteries (approximately 12 days continuous operation),
analog output cable w/BNC (to oscilloscope input), manual,
calibration certificate, transit case. In new condition.
Current price from manufacturer is $900. Sell at $450.
Three available: all three, $1300 including 3-channel
chart recorder (see below).

LEEDS & NORTHRUP SERVO RECORDER 136-304-304-304-00-00-00-
L0088-L0088-L0088-6-BV-000. Three-channel servo recorder,
modified for potential inputs. Can be internally adjusted
from +/- 1 millivolt F/S to +/- 2V F/S. Set at +/- 1V F/S.
Chart speed @ 60 Hz 2cm/hr or 2 cm/minute (at 50 Hz = 1.67
cm/min or 1.67 cm/hr). Internal line voltage selection for
100/120 V, 220 V or 240 V. Power burden: 27 VA. Power input;
3-wire IEC connector. (Uses standard IEC cords). With 2 sets
spare pens, 2 boxes charts, NEMA line cord, a few spare parts,
carrying case; Used, good condition; $100.

****
Electronic timer assemblies and components.
All items located 10 mi NW of Philadelphia, PA.

DYNAMIC TECHNOLOGIES INC. P/N 88052002 timer assembly

Printed circuit, single board. Digitally counts power
line frequency to generate four precision timed intervals
of 15 sec., 30 sec., 1 min., and 2 min.; also manual
start/stop. Accuracy: +/- 1 cycle of line frequency.

Control; manual input via membrane switch (or equivalent).
User selects one of 6 options on keyboard (DTI P/N
88052003) start 15 sec, start 30 sec, start 1 min, start
2 min, start continuous or stop. On-board piezo loud-
speaker beeps for each keyboard entry. Last command
entered cancels previous command or command in progress.

Power input: 120/240 V 50/60 Hz. Frequency and voltage selected by jumpers on mating connector (A/MP P/N 1-480287; requires up to 10 ea. A-MP P/N 60617-1 pin). Connector is available from A-MP or their distributors. Grounding is required for best noise immunity.

Output: Normally Open (NO) relay closes during timed period. One terminal of relay is connected to one AC line terminal (pin) on the connector; other relay contact to independent pin on connector. Relay contacts rated 30A resistive: printed circuit designed for 5A load. External varistors required for inductive loads; can be mounted on mating connector.

Timer overcurrent protection; 2 ea fuses, 2AG, 1/8 ampere fast blow, (Littelfuse P/N 225.125 typical) in clips on PC board. 1 set of fuses is installed on board.

Size: PC is 4-1/2" X 6" X 1-5/8" overall. Mounting centers 4" X 5-1/2". Designed to mount with four nylon snap mounts, RICHCO P/N DLCBS-4-01 typical. 1800 available; 104 timers per carton; shipping weight: approximately 60 lb/ctn. 4000+ matching membrane switches included in lot.

Make an offer.

****

2AG-1/8A fast blow fuses, Littelfuse P/N 225.125. 5800 available in original packing. Make offer.

NYLON snap-in printed circuit mounts; RICHCO P/N DLCBS-4-01, Snaps into .156" hole at each end; 1/4" spacer between. In bags of 1000. 25 bags available. Make offer.

Circuit breaker, Potter-Brumfield P/N W28X1A-5, 5 Ampere; in original factory cartons (600/ctn). 4500 available (7-1/2 cartons). Make offer.

RELAY, 12VDC, SPSTNO, 30 Ampere; Printed circuit mount, Potter-Brumfield P/N T90N1D1-12; in original factory packing. 250 available. Make offer.

****

HALL EFFECT DETECTORS

Texas Instruments TL173C. Linear output magnetic field sensor. Range: +/- 500 Gauss. Usable to 0.1 Gauss. 12VDC operation. TO-92 package. With data; price includes shipping. $5.00 each; 3 for $13.00. 400 pcs; $500.

Hi, all,

Does anyone have a source, or have stock of old-style spagetti (as used in battery radio sets)? Size needed is for #14 wire. By "old-style spaghetti" I mean the woven-cloth type that is covered by a shiny black shellac or similar material. We have some of smaller diameter, but need to cover bus-bar for restoration of a battery receiver.

Thank you!

73 de Bill, AB6MT

hi there, that's why i don't get on 75 meters anymore, it sounds like the cb band. i sold all of my hf geer, because of that 75 meter band. if hams have to put up with all the crap on 75 meters, they might as well go back to the cb band. i am an extra class on top of all that. so i am going back to 2 meters or the cb band one or the other, take care all from n4pge.

Bis Wichy, WD0HCO (bis_wichy@Webtv.net) wrote:

"Here's more food for thought... throughout the 70's, 80's and 90's, technical information has been stored on computers of various brands and operating systems, many of which are no longer supported or even in business. Magnetic tapes and floppies are being reformatted and reused all the time to save money... I'm quite sure historically important techncal information is now being destroyed accidentally on a daily basis."

Or, if it is kept, the equipment to read it no longer exists.

Here's an example. Nippon Columbia (known outside Japan as Denon) released the first digitally mastered LPs way back in the early 1970s, using an experimental recorder leased from NHK (Japan Broadcasting Corporation). NHK scrapped that recorder a few months after the Denon LPs were released, since they were continuously improving their digital recording techniques; Denon still has the digital master tapes and would like to re-release the albums on CD, but the only way to do it would be to build a new playback machine based on the old format, and that would depend on NHK being able to find documentation on the format being used at that point in the project.

I can't help you with the technical details, but the rig was made between 1951-1957 according to the Shortwave Receivers Past & Present Book by Fred Osterman. I have an SX-71 that still works. Beautiful Audio quality.

Strange that these hollow-state radios should still be in service this late in the solidstate era, but look at this (BTW, 150 pounds Sterling is about $270US):

From a UK ham site:
M&B radio in Leeds are currently selling the last 150 RA17L's to be released
by the government. £150 each.
They also have a few RA17's for £130 each.
I am not sure if they have any SSB adaptor equipped sets' though.

Some 1792(?)'s as well. £650 each.

Pity you didn't move down to the 80m band - first 100 kc are always
very very pleasant. Lots of great folks to QSO with, e.g., the
Glowbuggers on 3579 kc with their homebuilt Harley transmitters
and regen receivers.

You gave up too easily, but that's typical of today's generation.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Are you're into homebrew electronics, or need a replacement chip for
a piece of hardware that you'd like to repair?

As part of my fall/winter cleaning, I am clearing out my collection
of electronic parts and supplies.

Most of these chips are early-mid 1980's vintage, which is when
I was involved in hardware design work, so if you're looking for
AMD K6's or Intel Pentium II's, you won't find them here.

All the chips were functional when I stored them away a number of
years ago, and they are all packaged in anti-static foam or tubes.
Unfortunately, I don't have any means of testing these chips,
but if you buy one and it is DOA, you may return it within 10 days
for a refund.

I have not priced any of these chips, so all reasonable offers will
be considered. All chips are packaged as DIP's unless otherwise
specified. Numbers is parentheses are quantity of chips available.
Sorry, I don't have datasheets for any of these. Buyer to pay shipping
costs.

I also have hundreds of TTL chips and assorted other goodies too
numerous to inventory right now. Please e-mail me with your requirements
and I will tell you what I have available.

Thanks for looking!

4641. National trade?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-11-30 00:00:00 UTC
From: larry@no.spam
Message-ID: <65srb4$tc9@camel19.mindspring.com>
Source record: 113857

Good evening folks,

I would like to propose a possible trade with another
National collector:

I'm looking for the original NC-100, with the art deco front and
tuning eye as shown on page 102 in Moore's 4th. Would also take the
NC-100X on page 103. I want one with the art-deco front and red trim,
and general coverage only.
I'm *not* interested in the NC-101, 101X ham band only models.
I want one nice enough to put in my living room.

I have to trade: One National ex military HRO-M (RC-105) W/eight coil
sets, coil box, and two power supplies. Original doghouse has bad main
transformer, home made replacement works very well. This is not a "Jr"
version, it does have a crystal filter and s-meter. Radio completely
recapped recently, 95% new resistors, just tuned up and I have a set
of spare NOS tubes for it. Could use some paint touch up, but no rust.
Outside of unit is about 7.5, inside is 9+... This is a *very* nice
HRO, and it works very well.

I would be willing to trade this HRO even up for a very nice art deco
NC-100. The HRO-M with *8* coil sets is worth in the $250-300 range,
so I'm looking for a *very* nice NC-100.

Please drop me a note if you have a nice art deco NC-100 or NC-100X
and what you really want is a nice HRO.
-Larry

I hope that someone out there has a ranger manual for the first ranger out. The one that came without the grid block keying circuit. Someone has moved some of the wires on the operation switch.I believe they wanted to make it a cw only transmitter. I am not sure. My scematic of a newer ranger shows only one block a 12 connectors mine has 2 one infront of each other with the pin running through both then out of the case to the operate knob on the other end for a total of 24 wires going to all points in the radio. Man I hope you guys understand that HI-HI. Anyway I have both ranger and ranger 2 manuals both have the bias grid block circuit.This ranger has no such critter. What I am wanting to do is restore the connection on this switch to the rightful places.If one of you elmers out ther could look through your old Johnson manuals or have any Ideas for me (nice Ideas-possitive thoughts please) hihi Please let me know. I sure hate to give up on this radio it is in good shape other than this switch.
73, Happy Hollidays

I have for sale an old Yaesu station that has evidently been in storage for quite a while. It consists of a FLdx400 transmitter, FRdx400 receiver, SP400 speaker, and a YD-844 microphone. The receiver has the 6 & 2 meter converters, FM board, and 4 mechanical filters. Cosmetic condition is 9+, have the original boxes for all pieces (except the speaker), original manuals and brochure from Spectronics who originally sold Yaesu equipment. All of the tubes in the transmitter and receiver that I can see appear to be Toshiba branded tubes (originals?) Both units light up, and receiver works quite well with a 6' piece of wire in the antenna terminal. Asking $400 for all (no splits) plus shipping. 915-699-6165 Thanks, Markus

I have the following handbooks for sale:

1965 Good to Very good condition (there are a couple of
stains on the front cover from a water glass).
Softcover. $12 + $4 shipping.

1969 Good condition, sofcover. $12 + $4 shipping.

1970 Good condition, however cover is worn, and there's
a crease in the spine. Softcover. $10 + $4 shipping.

1974 Fair condition - pages are yellowing (this seems to be
a problem common to mid-70's handbooks) and cover has
creases, but otherwise OK. Softcover. $8 + $4 shipping.

1976 Good condition. Creases in cover. $10 + $4 shipping.

1977 Good condition. Creases in cover. Pages yellowing at
edges. $8 + $4 shipping.

Thanks!

There are 23JS6 and 31JS6 versions, too-- there were designed for
controlled-current heater strings. In a pinch, you could use these
versions (Which oughta cost less) and an external filament transformer
or two (series-connected as appropriate).

Source record: 113787

I am trying to get some PRC-6's working all on the same
frequency, for a re-enactment group. I've got a few working as
they will receive from a signal generator, and I can hear the
transmitter on a scanner, but I need some crystals to get them on
the same frequency. I'd like to put them on the 6M band so I need
crystals marked 48, 49 or 50, .1,.3,.5,.7,.9 Mhz. In case you're
wondering why the freq. is low it's because of the 4.3 Mhz IF.
Thanks in advance,

4670. Ranger chirps

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-01 00:00:00 UTC
From: Carl Yaffey <cyaffey@sprynet.com>
Message-ID: <eduKIlo$8GA.272@ntawwabp.compuserve.com>
Source record: 113789

My Ranger chirps on 40M only. It's fine on 80 and 20. It has the keyer mod and it's adjusted properly.
The chirp only shows up when running in CW position - not in TUNE. The spot signal is OK as well.
Could this have something to do with the VFO being on 40M? RF feedback? Any suggestions?
73, Carl

4671. FS: Motorola R-390A/CV-591 package (or possible trade)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-01 00:00:00 UTC
From: "L.Mark Pilant" <pilant@star.enet.dec.com>
Message-ID: <34832C0D.4F89@star.enet.dec.com>
Source record: 113790

Well, I've decided my wrists need a break...:-)

I have for sale an R-390A "package" for $450.00 for local (New
Hampshire)
pickup. This "package" includes:

o A Motorola made R-390A. This unit is in good condition; mechanical
and electrical. It is complete with top and bottom covers, both
meters and the Motorola manufacture name tag. (It also has a
Collins PTO.)

There are no modifications or extra holes I can find. The front
panel has some scratches and wear marks. (Not down to bare metal,
but visible.) The front panel is silk screened, not engraved.

At some point in the past, some small critter got inside and
nibbled on the wire insulation, but it is not extensive and does
not affect the electrical performance. (However, There are several
pieces of coax with parts of the outer insulation missing.)

o Spare 26Z5 rectifiers (3 NOS) and 3TF7 ballast (1 NOS) as well as
a couple of other tubes.

o Original TM mumble-35 depot maintenance manual.

o Fair Radio partial depot maintenance manual reproduction.

o A CV-591 sideband converter. (This is designed for a receiver
with a 455 KHz IF output.)

o CV-591 maintenance manual copy.

o LS-166 600 ohm speaker.

o Misc twin-ax connectors. (Including a twin-ax to BNC adapter I
made up.)

As this package is quite heavy, I'm looking for a local pickup. (That
way you'd also be able to check it out first hand.)

This receiver is great if you want to listen to a narrow range of
frequencies, or need something very stable. However, it doesn't serve
me too well for SWLing. Surfing through the bands it doesn't do well
:-)

I've become pretty fond of my Hammarlund HQ-170C, so if someone has an
HQ-180A (or -180AC) plus some cash I would be willing to consider a
trade.

I'll take all the mail I receive by Thursday December 4, 12:00 EST and then do a random drawing. I hope this will give everyone a fair chance.

73

I'll respond by post so others can learn...

First I am assuming all holes have been filled (using wood filler) and all spots have been re-stained. Check for cracks & Woodworms on the inside of the cabinet.

Now take an old soft cotton T-shirt and place a small bit of FORMBY'S Lemon Oil Furniture Treatment on it. Rub it into the cabinet a little bit at the time.

Take a dry section on the T-shirt and go over the entire cabinet. Take your time and do this step right.

Let it dry over night and then use "Orginal Endust" for the final shine. Rub it in lightly. If you took your time, it will look great.

Don't be afraid to take your cabinet to Home Depot, Builders Square, or other do it yourself stores. They can be a great help. I have come across some real wood lovers on the sales staff that have taught me some new staining tricks.

Message-ID: <3483A332.6468A270@abac.com>
Source record: 113798

Recently picked-up a W.W.II Navy Receiver made by National called the RBL-5. Appears to cover VLF thru 640 KHz. Looks like it was never used and seems to work fine (at least on BCB with a short antenna). Anybody have any more info?

Regards

Bob LaRose N6OJZ

I picked it up at a forest service auction. I believe it is avionics grade and can be used in a helicopter or fixed wing. The helicopter I charter here in S.E. Alaska has a very similiar rig. It has 169.875 and 156.8 as the existing guard channels. Make offer.

4681. Motorola MICOM HF Rig

I have recently picked up two motorola HF SSB crystal controlled solid state SSB rigs. One is a model L70SBG1180BM and the other is a L43BBB-1190DM . I am interested in a manual for either one as they are quite similiar in construction. I am also interested in any thoughts on adapting this to a VFO. I would like to use it for the Ham Bands. I have recently moved to Alaska and would like to get back on HF.
Best Regards and thanks ahead of time, Zac

I had a chance to try 10 meter cw during the CQWW contest and noticed something strange. While tuning up, my swr slowly crept up from 1:1 TO 2:1 -- then started coming back down. I thought it was the antenna or feedline, but saw the same thing on a dummy load. The only thing remaining in the short feedline was an Oak Bay Technologies LP-11p Low pass filter which I noticed was getting warm. The filter is rated at 1KW and I'm running about 500 watts. The filter is assembled with many rivets and not easily opened. The rig is an TS-830 /Ameritron AL80B. The filter is as cold as stone on all other bands. If any of you fellows have an idea what's going on, I'd sure like to hear from you.

I have some new in the box Amperite time delay relays. They are the 115NO120 (115VAC, normally open, 120 second delay). Eimac says that 60 seconds is fine for the 4CX1000A.

They are of course the octal base.

$24.95 each plus $2.00 shipping for one. For 2 or more I'll pay the shipping.

Hi there,
I found that those three tubes have almostly identical spec.
Does it mean that I can use the 8874's (or 8873's) for my Dentron MLA-2500
which uses the 8875's as the final tubes?
Any comment will be appreciated.
Thanks in advance.

I am looking for the mods to get my Dentron clipperton L amp. running on 10m. I saw one mod that removed the FL1 filter board, this will not work as it causes a very high VSWR between the radio and amp.

Is there anyone out there with the original mod info from Dentron ?

Thanks in advance. Ernie KE3VC

There is a good source for the small 455 kc IF transformers in
Toronto, Ontario. Globe Electronics has a large quantity of them.
These are the small cans that were used in Hallicrafters and
Hammarlund and numerous five tube AM radios in the fifties and
sixties. I used one in an SX99 and one in an S108 with no mods
necessary. Even the mounting flanges were the same. I think I paid $2
for them.

Electrically they are identical. Physically NO... The method of cooling
is different on each one. If memory is correct the 73 requires a large
heat sink and has no fins, the 74 has vertical fins ala 4cx250 and the
75 has horizontal fins. If you can work out the cooling they should
work.

I have a Mercury Model 1000 Mutual Conductance Tube Tester in outstanding working condition. The case has seen better days, but it is sturdy. The case is designed to have a lid that closes to make the tester easily carried about, but I do not have the lid. The size is about 14"x14"x4", not too big. I have a complete reprint of the manual. I bought this as part of a package deal, it didn't have a manual, so I bought one for it. My price, which is very reasonable, is $40.00 plus UPS shipping for about 10 lb. from Northern Virginia ZIP CODE 22701.

Source record: 113728

Please take a look at this URL:

http://pw1.netcom.com/~arc5/xtal.jpg

This small crystal radio is built of metal, seeming
sheet galvanized or something similar. It is finished
in wrinkle-finish gold color. The "fabric" speaker cover
pattern on the front is silk-screened on.
The legs are either fine cast or machined. There is a cardboard
disk inside that displays numbers out the holes in the front.
The crystal is galena imbedded in a lead plug which is bolted to
the rear of the box. The coil has a slider contact against it's
front. The external connector posts have obviously been replaced.
Engraved on the bottom of the box is:

RADIO
CIGARETTE DISPENSER
---- PATENTED -----

Does anyone have any information about this radio?
Date? Rarity? Collectable?

Thanks and 73,
Dave Stinson AB5S

Gentlemen! All who answered my post over the last 18 or so hours....I posted that msg right before I went to bed. Then I awakened and went to work. I have just returned home and found 36 replies. Most items have been spoken for. I am compiling the list of folks who have replied in the order received. Many wanted the AT-1, bug, etc. I will send each of you a reply stating what you called for, if that/those items are available and how we will finalize the deals. I never dreamed I would find so many folks looking for old equipment. Please, gentlemen, be patient, I'm new at this. My printer is still running as I compose this.

73 for now....
Mike - K0COY
and thank you all!

Bogen MO-100A amplifier. Appears to be complete but
there are no tubes in it. Condition unknown electrically,
as I don't have the tubes that go in it! (Uses four 8417's)
Sell to best offer plus shipping or trade for other
tube type ham gear!

Dave, the Auction will be on Feb. 21st. Location will be at a professional auction house. Address will be posted soon. (I don't have it on me right now.) Doors will open for registration and set up about 7am with viewing starting soon after. The bidding will start at 9:30am. Check Febuary QST, CQ and other ham publications for more details. The web site has been updated and you can point and click to auction info.

I checked up on this with a buddy of mine that worked for Ailtech and
then
Eaton. He said the Spec Analyzer line went to a company in NY with all
the
Feild strength meters, etc. The amps went to AMT. The antennas went to
EMCO. The current probes went somewhere else but EMCO just bought the
line.

>73, Carl

Hi Carl,
Yup, you've got the right idea. Usually caused by loose or missing VFO
shielding. Only happens on 160 or 40 where VFO and output freq. are
the same. Will also show up as FMing on phone. Still one of those
mysteries, I've seen bad problems with just a couple loose screws and
also have seen them work just fine with the side cover missing from
the VFO. Go figure, but sounds like your logic is in the right groove.

Good luck, Greg K3EWZ

>NIB MD-7/ARC-5 modulator with dynamotor $125.00

Fair Radio has them for $45 plus $27 for the dynamotor - also new in
box. Actually theirs is the BC-456A modulator. Is this the same thing
with two 1625-s ?

Is your MD-7 somehow better?

Actually I was VERY surprised to see these coming on the market NIB
after all these years! Amazing isn't it!

>BC-457A, BC-696A transmitters very good cond. with FT-226-A rack $120.00
>BC-459A transmitter with FT-234A rack $60.00

They have the BC-459A xmtr for $85.00 but without shockmounts/rack
etc. So you have a better price on that one. Theirs are NIB though.

>NIB T-21/ARC-5 transmitter $60.00

>BC-454B, BC-455B receivers with 2 dynamotors and FT-277-A rack $110.00
>
>Thanks, John Richardson kb0upl

John - I hope you didn't think I was being "smart!"

It'sgreat to see these old gems being bought and sold.
The last ones I had were junkers and I had oped to get them on the
air, but wound up selling them for $10-15 each or so, the best that I
remember.

Is ANYONE actually using one of these sets on the air? I have never
worked anyone using one!

Wonki,

8873 is a conduction cooled anode. used in Heath's Quiet Kilowatt Amp.
Nice Amp!
EXAMPLE: HEATHKIT SB-230, anode has flat side on it and transfers heat
threw a berilium heat
conducting block to a heatsink on back of amp. Verticle mounted tube.
8874, 8875, are forced air cooled tubes. one forces air down
threw anode from top,
to base. I think other forces air across anode.

It's in the cooling!

Hi Gang - I've been looking for a DX-60B, since it was my very first xmtr back when I was a young pup. But if its design doesn't differ too much from earlier models I might relax my requirements for the B-model.

If you could specifically list the improvements between the 60A and 60B, that would be fine.

The original Ranger did not have the keying tube circuit incorporated,
but later versions and Ranger II did. The keyer add-on kit could be
bought for later installation, and many were, or were homebrewed. I have
the schematic of the Ranger without the keyer, and also a sheet that
came with the kit that has the schematic for the keyer and instructions
for it's installation into the Ranger. I can supply these copies, or
copies of the complete manual for the Ranger and Ranger II. (also for
the Adventurer and Desk Kilowatt)

Howdy,
Anyone know a source for the 4-tab mount, insulated 125 UF-450 V. electrolytics used in the Apache/DX100/SB200 and many other Heath products. I understand they are no longer available from Heath.

Thanks in advance, Greg K3EWZ

>>NIB MD-7/ARC-5 modulator with dynamotor $125.00
>
>Fair Radio has them for $45 plus $27 for the dynamotor - also new in
>box. Actually theirs is the BC-456A modulator. Is this the same thing
>with two 1625-s ?
The BC-456 is *not* the same as the MD-7.
The BC-456 is a single-1625 screen modulator, designed for the Army
SCR-274N rigs. The MD-7 is a plate modulator, designed for the Navy ARC-5s,
with two 1625s. It's far rarer in good condition. $100-$125 is the going price.

>Is ANYONE actually using one of these sets on the air?
I have used them in original configuration sucessfully.
I have several complete, original and unmodified sets on the air:
(1) Black wrinkle first production run Western Electric SCR-274N
Army Signal Corps. 2 Transmitter 3 Receiver. You can see a photo at:

http://pw1.netcom.com/~arc5/blk274n.jpg

(2) Single TX-single RX silver Army SCR-274N.

(3) Single TX-single RX black Navy ARC-5.

(4) Single TX-Single RX black Early Navy ATA/ARA.

I am also building a 3RX/2TX Late Navy ARC-5,
an early Navy 2TX/2RX ATA/ARA and
an ARC-5 VHF set.

Needless to say, I love the sound of all those dynamotors.
I know of several other people who have them cooking.

4731. GE Pacer Low Band Mobile Xcvr - What To Do?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-03 00:00:00 UTC
From: jknoll@visi.com
Message-ID: <663kla$7ru$1@darla.visi.com>
Source record: 113750

Hi to the world of boatanchors :)

I have a GE Pacer low band (setup for 10m FM) mobile tube type 30 watts or so radio sitting in my basement. I don't know what to do with it. I hate to throw it out because last time I checked it worked. This is/was a neat little radio that would provide single channel operation on 10 M FM back when there were no 10 M FM radios out there. It has a transistor inverter that converts the 12vdc to needed HV for the tubes - a familiar whine when it is running.

Any ideas on what to do with the thing?

Thanks,

Jim

4734. FS: Hallicrafters "Loudenboomer Mk II a Amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-03 00:00:00 UTC
From: kc5mdm@iglobal.net
Message-ID: <881160237.24669@dejanews.com>
Source record: 113753
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

This amp has been stored for a while but is in real nice (dusty)
condition. Said to be in use when the Ham became silent key 6 years ago.
Would restore to new and has spare 3-400 Z tube as well as the one in it.
$450 .oo firm plus shippping from 79761. Looks sort of like a 30L-1
with power supply in separate case that is a bit larger. Have Dow Key
relay box for use with older rigs. I wont say it is working now, but its
obvious that it has and nothing is burned or looks bad. Would consider
trades for newer amps or HF gear, Im just not a collector and already
have an Alpha. Thanks, feel free to inquire about possible trades.
Murray

4741. Swap: SP-400X for Signal generator

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-03 00:00:00 UTC
From: kk5fe@communique.net
Message-ID: <664fv7$30d$1@kiyoko.communique.net>
Source record: 113760

Same radio, no one wanted to buy it, so I'll go this way.

I have a Hammarlund Super Pro SP-400x that is the commercial version for swap. It has the original power supply and black crinkle cabinet. The cabinet is in very good cosmetic shape, there are three unoriginal holes on the back near the bottom.
The front panel would have been in very good shape also, but has five unoriginal holes that I put matching screws into. Has all the knobs. The insulated part of the phasing shaft is missing, but I have the knob.
Now for the rest of the story, this radio works but not very well. It has been heavily modified. All the tubes in the "if" section has been changed to miniatures. The good part is the chassis was not touched, whoever did the mods used hole adapters for the miniature tube sockets. There are some other mods, but I have no documentation on any of it.

By the way you can see a picture of it on my web site, or go directly to the picture by typing this:

http://www.communique.net/~kk5fe/super.gif

What I am looking for is military test equipment. I am very interested in an RF signal generator, like the URM-25

Thanks for reading,
Keith KK5FE

> K0PW

Yeah, on 10m, you're getting close to the highest frequency that the
filter will pass, so the parts are heating up. Then the high temp must
be affecting one or more componants that affect the SWR.

Hello To the Group,
Have recently aquired a Johnson Viking Messenger model# 242-203.
Of course it came without manuals of any kind. I have been told that
it's a 10 meter crystal controled tranceiver at about 10w input. It's
not a collector piece by any means but might be fun as a mobile. Anybody
have any info on this rig or maybe even a manual? would appreciate any
response.

4757. FS: Tube Equipment + tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-04 00:00:00 UTC
From: Ross Lipman <rl1856@***ix.***netcom.com>
Message-ID: <666sri$9gi@sjx-ixn2.ix.netcom.com>
Source record: 113677

For Sale: Tube equipment + tubes

Tube Receiver:

HARMON KARDON TA-230 TUBE RECEIVER
AM/FM tuner is mono/MPX out- all else is stereo. Full source selection as well. Very Clean! Weak tubes replaced. Strong and bright tuning eye tubes. No case. Works and sounds glorious. On/Off switch replaced. Overall near mint condition.

$125.00 + shipping

Tuber Tuner:

DYNACO FM-3
Original stock condition. All weak tubes have been replaced (not tele <>). Strong and bright tuning eye. Works, sounds and looks great! Includes copy of manual and my personal 'net file on modifications and rebuild information.

$140.00 + shipping

Tube Preamp

AMPEX Stereo Preamp

Unit has been rebuilt with new power supply components, new caps, new AC cord, gold RCA line out jacks and NOS tubes. Looks, sounds and works great! Compact size. Unique push button source selection (no cheesy rotary switch to corrode).

$165.00 + shipping

Tubes:

Metal 6L6 used

6 RCA
1 TungSol

$35.00 + shipping for all 7

Metal 6V6 used

4- RCA

$15.00 + shipping for all 3

Or $50.00 for all of the tube and I pay shipping.

4759. CHARTER

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-04 00:00:00 UTC
From: res@cmprime.cis.att.com
Message-ID: <6671g6$8dr@anchor.cis.att.com>
Source record: 113679

CHARTER: rec.radio.amateur.boatanchors

The newsgroup, rec.radio.amateur.boatanchors, is primarily for discussions of topics related to classic amateur radio gear. Participation by others who are not licensed radio amateurs are also welcome.

EQUIPMENT.
Appropriate equipment of the boatanchor category includes:
- equipment constructed primarily with vacuum tubes, not solid state devices, and manufactured generally in the post WW II-to-1970 timeframe.
- transmitters (amateur, military, home made)
- receivers (amateur, SWL, military, home made)
- station accessories (keys, bugs, microphones)
- test equipment from the boatanchor era used in the repair and restoration of boatanchors, such as scopes, af and rf generators, meters of all kinds, etc.)
- parts and techniques used in construction of boatanchors (vacuum tubes, condensers, etc.)

TOPICS.
Topics regarding the above equipment built entirely or primarily with vacuum tubes (as opposed to solid state devices) are welcomed in this newsgroup. Suitable boatanchor topics may include :
- collecting
- modifying
- tuning
- obtaining parts (specific requests for parts/equipment are permitted)
- manuals and TM (tech manuals) copies exchange
- restoration and refinishing
- values of boatanchor gear
- sources for parts
- questions and advice for others
- Morse Code operation - advice, legends and lore
- Modes of operation: CW, AM, early SSB
- manufacturing during the boatanchor era, including companies, personalities, and manufacturing techniques
- design and engineering history of equipment of the boatanchor era and comparisons to prior technology (arc- and spark-gap transmitters, Alexanderson alternators, galena detectors, magnetrons, Nixies, quartz crystals).
- other subjects of a historical nature
- commercial postings, if SPECIFICALLY offering products and services DIRECTLY relating to boatanchor collecting.

OFF CHARTER TOPICS.
The following subjects are off topic in this newsgroup:
- discussions of hi-fi, stereo, and/or broadcast receivers. (use rec.antiques.radio+phono and rec.audio.tubes newsgroups)
- antique equipment (use rec.antiques.radio+phono)
- entertainment television receivers
- cross postings from rec.radio.swap
- discussions that are more appropriately held in other rec.radio.amateur newsgroups, such as code vs no-code
- off-topic commercial postings are specifically prohibited from the newsgroup

FAQ.
- A list of Frequently Asked Questions will be developed by volunteers in the newsgroup and will be posted monthly. This FAQ will be helpful to beginers as well as first time visitors to the newsgroup. The FAQ will contain a list of commercial vendors who specialize in products and services of value to boatanchor collectors.

At an airport newsstand I picked up a Scientific American Special Edition on "The Solid State Century". It contains some very interesting articles, among them a short piece entitled "Where Tubes Rule" . There are two very pleasing photos of glowing firebottles (marred only by a hideous "Golden Dragon" tattoo on the side of an 811A!) The text describes the debate over audio quality (ss versus tube). Sure to generate heated ;-) controversy. Check it out!

: tdragonn@blarg.net

I doubt you will be able to add much frequency coverage to the '42.
And as for adding 66-88 Mhz(midband)-don't bother....you have to disable
30-54 coverage to get the 66-88-you can't get both at the same time.
Even if you did not mind using 30-54 coverage, the tuned circuts are not
tuned properly for 66-88-in fact not only is the tuning different, but
several parts have different values on a unit designed to operate at
66-88.
Also, in the USA, those freqs are mostly used for TV audio, wireless
mikes, and audio enhancement devices.
Almost all of the above use WFM.
Since the PRO-42 can not receive WFM, you would get a rather distorted
result.

Jeff,

In 1965, I built and used a DX60A on CW as a novice, then
on screen modulated AM with a drifty VF1 VFO as a general.

If I recall, the DX60B had a "crinkle finish" paint
job versus the DX60A's glossy coat.

The original DX60 meter was recessed, surrounded by a large
trim ring. The "improved" meter in my DX60A stuck out and had
had a clear plastic face instead of a trim ring, making it
vulnerable to damage (i.e., a cracked cover).

I used to burn up a rubber grommet in the final amp cage
if the SWR became too high. I think a bare wire from
the plate circuit passed through it.

Also, my DX60A frequently burned up the 8.2 ohm resistor
between the 6146 cathode and ground if I left the CW key *UP*
for more than a few seconds. As a lad of 13, I used to blame
myself, not realizing that Heath engineers should have used
a 2 watt resistor!

Hope you find one in prime condition.

4794. "Unusual" Zenith M660A Comm. RX??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-06 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19971206032301.WAA28788@ladder01.news.aol.com>
Source record: 113617

I happened across an unusual Zenith table set the other
day at the local antique store. The set covers from 120 to 230 kc
longwave, standard BCB, shortwave 1.7 to 4.6, 5 to 14, and 15 to
30 mc. The set uses a large slide rule dial, and is styled similar
to the Heath GR 54 and GR 64 from the mid 60s. The radio is
rather stylish, it would look good in a domestic setting or ham/SWL
shack. It has an ANL and BFO switch. The rear tag
showed it was a model M660A; and uses the following tube
lineup: 50C5, 12AV6, 19EA8, 12BA6. I'm guessing it is mid 60s
vintage, and that it probably uses solid state rectifiers.

Is this a "rare" set? Raymond Moore's "Communication Receivers -
the Vacuum Tube Era: 1932 -1981" (4th edition)
does not show any Zenith communication receivers.
Since the M660 meets all of Moore's criteria
(BFO, USA made, vacuum tube, continuous tuning, etc.)
I assume its absence is due more to its rarity than anything else.
I vaquely remember some folks discussing a similar Zenith some
time back in a newsgroup -- but I have forgotten the particulars.

I am halfway torn between going back and snapping some photos,
or maybe making an offer on the radio -- it is a tad "modern" for my
tastes, but I like the looks of the set. Current asking price is 65
bucks -- should I grab it and run, or just run??

Jack,

Very interesting post. I have a 20 month old daughter who likes to do the
same thing. I collect old broadcast band radios and have a Metrodyne Super
5 set up in my home theater enclosure. This radio has 4 large dial knobs
which could never be swallowed if the came off. When she toddles over to

play with the knobs, we call her "Mad Scientist Baby"... and she looks the part. I also have several old floor console models set up in the den with many buttoms and large knobs. One of these used to have 8 small cardboard BCB callsign displays above the buttons for frequency selection (kind of like the old car radio's) 17 years ago, one of my older daughters who was three at the time found out that it was fun to punch out the cardboard with her fingers :)
other than that, none of my 5 kids have ever caused major damage by playing with the old radios. (however, my 20 month old daughter figured out that my macintosh computer has a pretty on light, and she figured out how to turn it on and off, which she did about 10 times in a row before we realized what was happening.... you can imagine the problens that caused)

I would just advise you to get something with very large knobs, toggle switches and maybe push buttons. No problems with meals there. Big and heavy would be a plus also so he could not move it. of course it needs to be disconnected from the mains. Old BCB radios from the 30s are not too expensive and he probably can not hurt them as long as you seal the back and remove the tubes.

Good Luck

4801. Drake TR-3 Transmit Help Please

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-06 00:00:00 UTC
From: Lumpy - AB&#65533;GD <lumpy@digitalcartography.com>
Message-ID: <3488FDD0.150B@digitalcartography.com>
Source record: 113624

Good Morning -

I am VERY new to HF and to Drake. I wonder if you experts could help point me in a logical direction for help with my 'new' TR-3.

Powering it up through a MFJ tuner into a G5RV dipole, I can get it to less than 2:1 SWR on all bands. CW power output is >100 watts.

On SSB I seem to get no power output, no plate current meter deviation. I have read that a lot of power/wattmeters are not sensitive enough to read the peaks of SSB phone. But even on lowest scale, 20 watts, peak or average, there is no movement. Plate amperes likewise. Absolutely no movement. There is also no movement on my external, passive field strength meter on SSB, but there is on CW.

In AM phone, I get a tiny bit of movement on both plate and watt meters. Using either a Shure hi impedence Uni-dyne B or a Japanese hi imp. clone. Both the same results.

All the tubes are glowing. Only mod I have made is to replace the mic input jack with a standard 1/4inch. Also replaced the two .001 mfd caps on the mic input. I am sure the jack is wired OK. Matches the schematic. VOX kicks in appropriately. I have sprayed all the contacts, switches etc with cleaner. I don't seem to notice any control scratchiness or mechanical drag.

I've had the Drake up and running for several days now. Been unable to make any contacts on SSB.

For lack of any other good guesses, my next thought would be to replace the 12AX7 mic input.

If you could point me to any kind of help or suggest where I might start suspecting a problem, I would greatly appreciate it. I have posted a plea for help on the Drake reflector.

Thanks in Advance, Lumpy AB&#65533;GD

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio or computer EQ. will be considered. All working last time tested unless noted.

Thanks

Kenwood TS-820S - Digital Ham Transceiver 120-10 meters. Looks and works good. 100W output. $400

Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks and works good. 100W output. $250

Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks and works good. 250-300W PEP output on SSB. $225.

Siltronix VFO Model 80. $75

Heathkit Hw-101- Tube type Ham Transceiver/with Power Supply 80-10 meters. Receives, but does not transmit. $100.

Yaesu FRG-7 Solid State General Coverage Short wave Receiver. Looks and works Great, except the Power Switch has the tip end missing. but still working OK. $225

National Two/Seventy Ham Receiver with 6 Meters. All Tube with matching speaker $250.

Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $175

Lafayette, Constat 25- All tube CB Transceiver. Have two. One is working the other for Parts or can be repaired. both for $ 150.

Pal, VFO- 11 meter CB $30.

Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

Sears- 10 channel Crystal Control Table top Scanner. $50
Regency- 10 channel Crystal Control Table top Scanner. Wood case $50

Realistic Pro30- Programable Hand Held 16 Channel scanner. 30-50,108-136, 138-174, 380-512 Mhz. $60

Regency HX2200- Programable Hand Held 20 Channel scanner. 118-950 Mhz including cell. coverage. $60

Craig- 6" Reel to Reel Stereo Tape Recorder. $50

AR Inc.- Stereo Amp, all solid state. $125

Heathkit- Model-AA-32 Tube Steteo Amp. $100

Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601)
Looks good and plays on FM. AM not working. $150

Bell Fax Line 1500- Fax and Phone Machine. Was working Great, but stopped
working last time I plugged in. $50.

Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and
Tele-wide finder lense. $100

The local Collins GURU here says if its a winged emblem, its a conversion, not a factory "C". Just for the record... is this true?

4809. WTB: Bandspread DIAL for HQ-140XA

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-06 00:00:00 UTC
From: shphilip@ix.netcom.com
Message-ID: <66brqp$s5q@sjx-ixn9.ix.netcom.com>
Source record: 113632

Hello,
I'm looking for a bandspread dial for a Hammarlund HQ-140XA receiver.
It is about 6" in diameter and is marked with the 80,40,20,15 & 10 M
bands along with a 0-100 slide rule dial. The edge is marked with
#6051-2. If you have one or could direct me to a Hammarlund parts
source I'd be grateful.

Thanks,
Scott Phillips, N9UBZ
shphilip@ix.netcom.com

4810. Johnson Ranger help

Source record: 113634

I have for trade only, a nice looking, good working Drake 1A receiver. I want to trade for one of the following receivers in order of preference: Hammarlund SP600, Hallicrafter SX173, or National NC183DR (rack mount). Possibly some other rack mount boatanchor would be acceptable. Must look nice and work properly, manual if possible. Email if interested,thanks. I am in Missouri.

4812. FS: SWAN 700CX and acc..

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-06 00:00:00 UTC
From: markust@lx.net
Message-ID: <881428475.9469@dejanews.com>
Source record: 113635

I have a SWAN 700CX and 117XC power supply for sale. The rig and power supply are in collector quality condition. Also included is a FC-76 frequency counter, 510X crystal oscillator, FP-1 phone patch and several used 8950 final tubes. All of the accessories are in excellent condition. I have the original manuals for the 700CX and FC-76 as well as the original boxes for the rig and power supply. Asking $450 for all plus shipping. Will not split the station up. Thanks, Markus.

This is an excellent idea!

Don't forget look at old computers as well. The ones with many rocker switches on the front panel (like a old PDP4). Lots to look and play with!

Hookup a 9v battery, dropping resistor and different color of LEDs. Drill holes and super glue them to the front panel. Hook them up to the switches to turn them on and off. It's also possible to hook up a cheap old transistor radio inside your "BA" and use one switch to turn on/off but keep tuning and volume controls inside with radio. Adjusted to a comfortable level, of course!

It's the 90's version of the toy drum...

Good Luck

Sir,
You might want to check: "Ask the Zenith oracle" @

http://www.oldradios.com/reference/zenith.htm

It's a database of older Zenith radio info.It allows numerous ways to
"ask" questions.

GoodLuck,

buck

If you don't have some sort of volt meter, go to Rad Shak and get one.
Then start working your way backwards from the tube filament pins
toward the filament xfmr. May be a cold solder joint.

Why not go down to a Toy Store and buy the little fellow something
that is suitable for his age group? There are many colorful toys
that have things that can be twisted, turned, etc. that are far more
suitable for a young child than a vintage radio! A kid that young can
still pull a heavy radio off a shelf and hurt himself. Hate to be a wet
blanket, but old radios are not toys for toddlers.

Pooh! I say why not let them play with working radios? I let my
7 year old play with my RF-590A since he was 3, and now he is
very good at it, is absolutely fascinated with foreign languages,
and has gotten a keen interest in learning about how radio works.

Harris equipment is pretty indestructible...

Actually it will be worth $1,500 to the person who buys it :) If he or she
is happy with it, then it probably is a good deal for both of them.

4830. FS: Johnson Microphone

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-06 00:00:00 UTC
From: Sir Robin <nexus15@flash.net>
Message-ID: <348A1F8B.26D@flash.net>
Source record: 113653

Looking for a microphone to match your Johnson Transmitter?

I have a Johnson desk microphone for sale. This is made by Turner and is very similar to the Turner 252, with single PTT bar and top ribbed element housing. It has 'Johnson' written on the push to talk buttom and has a Johnson 'viking' logo in the middle of the element screen. Grey/green housing color. Very good condition. Unterminated coiled cable.

Price--$20 plus shipping (which should be less than $5) but you tell me how you want it shipped.

Thanks...Rick...W5RH

4831. FS: Conrac AV

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-06 00:00:00 UTC
From: Peter Ferrand <petef@sprynet.com>
Message-ID: <66buae$6fk$1@juliana.sprynet.com>
Source record: 113654

This is a Conrac Audio-Video Receiver, model ERL82A/R, which is NOT a TV set in spite of the name.

To quote the manual: "The ERL multiple monitor control receiver allows single location control of both picture and sound for any large grouping of local monitors. Designed to permit simplified addition of R.F. channels to a high resolution video closed-circuit installation, the control receiver features a switch on the front panel which changes the signal fed to all monitors from "broadcast" to "CCTV."

What we have here is a professional looking rack mount unit that"s 7" high and weighs 24 pounds, containing a VHF tuner, a UHF tuner, and controls to switch audio and video to a group of video monitors. The controls select either the tuners or baseband CCTV-type inputs.

Unit runs of 120 VAC. VHF input is 75 ohms and UHF is 300 ohms. IF used is 45.75 for pix carrier with intercarrier sound at 4.5 MHz. AGC equipped. The VHF tuner is an "arbor-type". Guess you didn"t know tuners grow on trees...

Video input is minimum .25 volt peak-to-peak for .25 at each of two isolated outputs. Recommended input is 1 to 2 volts for the same level at the two outputs. Sync negative in and out.

Video input is high impedance bridging, response is 10 MHZ +- 1db closed circuit and 3.75 off-air.

Audio signal 1 volt minimum input with an output cathode follower at .3 v adjustable and local monitoring at 2.5 watts. Response 100-20000 Hz in normal position with filtering provided for speech, bass and treble.

Tube complement includes 12 tubes using 6GM6, 6DJ8, 6AM8, etc.

A nice and rare BA dating from 1963, and includes a manual with big schematic, voltage chart, alignment info and a bit of basement mold at no extra charge.

A number of uses for this, none of which have any relevance to anything I"m doing, so I"ll sell this for $100 plus shipping if needed from Nashua, NH 03060. E-mail or call if you wish at (603)889-1067.

This may seem a bit off the wall to some of you:

I have a son, 21 months old that loves to twist and flip knobs and levers.

I would like to find a NON WORKING Heavy desktop radio for him to play

with.

Please keep in mind Set Screw knobs and levers are a must to ensure

he does not turn them into a meal.

I have little knowledge what models fit this child proof concept and look
for your input.

I live in Eastern Iowa if anyone has such a Critter for little Cristopher.

I have looked at few hamfest and found only collector radios at collector
prices.

I just want something that is cleanable and safe. A COOL KID TOY!

Thanks ,

Hello Everyone:

I have just come into a couple of these GDOs and will sell one....

The Millen 90651A is a unique model of the famous GDO. It was the
last of the tube models before the introduction of the *olid-*tate
model. It has the same gray painted cover and the square meter
AND includes the oscillator internal just like the later model.

I also have coils A - F which takes it up to 150MHz and a copy of the
manual.

Price is $75.00 plus UPS.

If interested please reply by e-mail.

73,

Michael Crestohl, W1RC

>
>WHAT ARE THE MOST COMMON REASON FOR BFO FAILURE IN THE BC348. TUBE CHECKS
>OK.
>
>
Several things to check:
1) Substitute a known good tube (sometimes a tube that checks OK in a checker that works at DC or low frequencies will be a dud at RF). The "early" models use a 6F7 which is a triode and pentode in the same bottle.
2) The '348 used about 40 small black plastic case paper bypass caps (I think they are .01 uf) - they are NOTORIOUS for failing - shorted, open, lossy, all sorts of ways. Often they fail just enough that something doesn't work, or doesn't work well. Got so tired of changing them that I finally got a pile of good micas and changed them all. I think there is one inside the BFO coil assembly that would be a prime suspect. Those Darn Black Plastic Capacitors ("TDBPCs") are the worst feature of the 348 series.
3) The carbon composition resistors have a tendency to change value, almost always to a greater value. A failed TDBPC often damages a dropping resistor in the process.
4) BFO on-off switch gets dirty and won't turn on.
5) BFO actually works, but is so far out of alignment that it's outside the passband and has no effect. Listen for the BFO on a BC receiver. (IF is 915 kHz in these receivers).

Hope this helps.

I have a Collins 75A3 Receiver that I would like to trade for older SSB gear. I would be interested in Drake (preferably B-Line), Atlas 350XL, Swan 750, or similar, good condition, working gear. All offers considered. The 75A3 is in very nice condition and can be seen at < http://members.home.net/rjlutz/75a3.jpg >. This receiver has an SSB mechanical filter installed. No AM mechanical filter.

I don't want to ship the 75A3 but will travel 50-60 miles to make the trade.

Let's talk about what you have to offer.

$150??!! Egad, Martha, someone let 'em ALL out of the asylum this weekend!

A new-in-box Ampro should fetch $25 tops, $35 from someone who had one as a kid and just can't live without it. You can find cosmetically very nice ones at any hamfest or local flea market for $0-$5. Mechanical refurbishing takes about a half hour and the parts cost about $15. By any standard they're dogs.

Woof, woof!

(And please stop shouting at us. If you are too lazy to use the shift key, turn the caps lock off and just use lower case.)

I had a DX60 for some years - it was a US model, brought to the UK, where I

bought it second hand. The manual was that of a DX60A (or was it a B ?), and I

could therefore get a good idea of the differences. My impression was that the

later models were "Value Engineered" (Cheapened), and that the DX60 would

definitely be the one to go for. Things I remember - the meter was behind a

substantial metal bezel, and some bandswitch wafers in the PA were ceramic,

where they were phenolic on the later A and B. The circuits were pretty near

identical. I don't think the later models were an improvement at all. The paint

was a glossy shade of Heathkit green, and the the visual impression was much

more pleasing than the later, external meter models.

Message-ID: <19971207223901.RAA21284@ladder02.news.aol.com>
Source record: 113580

My first HF rig was an S--53A. Properly tubed, and aligned, it is more than adequate for your International broadcast listening. Its not half bad on SSB, either, though it does take some doing to finally dial it in with its fixed BFO. Audio quality, electrically, is good, in fact you can use it as a reasonable audio amplifier through the phono in, and with fresh caps in the powersupply the headphone outs have very low hum and noise. But the open cabinet, and 4 inch speaker make for less than exciting sound.

My recommendation is to use an external speaker. Replace the tubular capacitors throughout the set with polystyrene or polypropylene Orange Drops and put it in the center of your listening table...because you are going to use it ALOT. With a long wire and a solid ground, this model is not only pleasant to use, but produces a good result.

If you have mixed feelings about an upgrade, don't . Put the money into cleaning up the circuitry on what you have, and a good antenna. You'll be happier than a pig in sh*t.

I recently bought for $20 a Sony ICF 5900W multiband. After numerous searches on DejaNews, sony.com and other sites, I am only able to surmise that the radio was manufactured about 20 years ago. I got the radio from a friend's invalid father, who was a longtime ham and shortwaver. Any information about lineage of this unit from former or current owners would be appreciated.

It was manufactured sometime around 1976 or a little thereafter. It is dual
conversion, with an extremely accurate bandspread dial for an analog radio of
its day. The radio also has a built in xtal calibrator which is used to
calibrate the bandset control.

Although a it sounds a bit bassy (sp?), a good pair of headphones will solve
that problem. It has a tuned front end with a balanced mixer and unlike
modern portables is virtually overload proof as long as you don't use an
exteranl antenna (which it doesn't need). If the radio is in good shape, you
got a steel at $20.

From: mc@shore.net
Message-ID: <66fhbo$2fo@northshore.shore.net>
Source record: 113585
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

This has got to be the nicest, cleanest DRAKE TR4-C and AC-4 station I've ever seen! High serial numbers, TR4-C # 35936 and AC-4 #45539. The radio looks like it just came out of the box. There are no heat marks around the final tube sockets on the bottom and no other indications that this radio was used a lot. The VFO is smooth and tight, front panel shows no wear and the cabinet is excellent. The screws that hold the covers on the radio do not show any burring on the heads, the four feet still have the rubber inserts in them. Price for the station is $450.00 plus shipping.

If interested please reply by e-mail.

>The local Collins GURU here says if its a winged emblem, its a
>conversion, not a factory "C". Just for the record... is this true?
>
>
Actually your Collins "Guru" may be a false prophet! 75S-3Cs were made
by the factory along with the 75S-3B. Its very easy to tell if a B has
been converted to a C model. Look at the PRESELECTOR control and check
the white scale showing the frequency. The B model has a thicker white
line highlighting theamateur bands whereas the factory-built C model has a
thick white line from 3 to 30 Mc. Another way you MAY be able to tell is
to look closely at the escutcheon plate and where it says 75S-3C. If
you see a stick-on label over the engraved model number you can be pretty
sure it was converted.

As fas as a $1,500.00 price tag on a WE 75S-3C I would say given the
filters installed and top condition it would be provided someone is
willing to pay it.

About five years ago my pastor moved and before he did he gave me a T-21/ARC-5 (28 Volts DC) transmitter. I have never used it and I am in need of money so I am deciding to sell it. It is in great shape. It looks as if it has never been used. Ther are a few minor scratches on top but the face is perfect. It is dusty from sitting in my basement for the last five years. Please make me an offer or email me for more info.

Thanks

It looks like the power transformer on my Kenwood TS-830S has gone
south. Rather than getting 800 volts a.c. out, I'm getting 354. The
rig still works, but the output is about 15 watts. I don't understand
why the windings didn't just open, but must have shorted somehow.
In any case, if you have an old Kenwood you're parting out, please
give me a call at:

It was called Sony SkySensor 5900 in Japan, the best model among the
Skysensor series. Its predecessor, Skysensor 5800, led many kids in
Japan at that era to the world of shortwave listening. If you ask it to
any Japanese amateur radio operator aged 33 to 38 years old, I bet everyone
would start to talk with it....
Although I never owned it (I got Panasonic RF2200 instead), I still
dream to own it.

A CLASSIC COLLECTABLE VINTAGE AMPRO REEL TO REEL RECORDER

AMPRO CORP MODEL 758 TWO SPEED HI-FI REEL TO REEL TAPE
RECORDER -- MID 1950'S IN NICE SHAPE & EXCELLENT WORKING
ORDER

- GREAT 1950'S ERA BEAUTIFUL STYLING & DESIGN WITH:

* COCOA BROWN CONTROL PANEL & GRAY KNOBS/BUTTON AND RAISED
GOLD AMPRO LOGO.
* MATCHING COCOA BROWN CARRYING HANDLE AND AMPRO LOGO
COVER LATCH
* HAS GRAY SHARKSIN CASE WITH FULL-FRONT BASKET WEAVE
SPEAKER GRILL. Just a great looking unit if you're a
1950's buff & love that styling.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY MONO
UNIT.

- HAS ORIGINAL SHURE MICROPHONE MADE FOR AMPRO (MODEL #189).
IT'S ENAMELED TO MATCH THE REEL TO REEL AREA SHEET METAL
OF THE INTERIOR-A NICE TOUCH BY AMPRO CORP.

Great sounding and EXCELLENT running unit for it's age.

The interior is like new and the case shows some wear, but
very minor for a unit of this age.

- SIZE (APPROX.)

16 5/8" WIDE x 10 5/8" HIGH x 16 1/4" DEEP

- WEIGHT (APPROX.)

38 pounds (fan cooled) TUBE POWERED

CONTROLS:

- Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

- Green Eye Tube Recording Level Indicator

- OFF/Volume Knob

- Treble/Bass Knob

- Buttons
* Record & Lock

* Forward
* Rewind
* Play
* Stop

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- External Amp or Speaker

- Remote Control On/Off Switch & Plug

Handles 7 inch reels.

Plus shipping and handling which won't be much, because I'll pack it free (the buyer will save there). To take it to a professional packing place can cost quite a bit--I hope you agree. Also, to show my gratitude to the buyer, I'll bring it directly to UPS instead of using a local private shipping store which marks up the UPS shipping costs 40% to 60% which is the practice for these stores in order to stay in business.

The asking price is $150, since this unit is in fine shape and not what you would normally expect for a collectable vintage unit. The fellow I bought this unit off of refurbished the mechanicals (his hobby) and gave me a copy of the SAMS PHOTOFACT FOLDER he used with it to work on it. This edition is for the Ampro 757 & 757-A, but is close enough should the unit require maintenance in the coming years. I'll throw that in too.

I can email a color photo and a drawing of the unit for your review, if you wish in the .jpg file format.

>==============================

But a Harris RF-590A goes for $2000 plus. That could buy a lot of
toys. However, I do agree that a working radio would be an excellent
gift at age 3 or 4. I was given a Heathkit AR-3 around that age and I
loved it. Got me going toward a ham ticket and an electrical
engineering degree.

Source record: 113472

I have a "like new" very MINT Johnson KW Matchbox and Coupler. This box HAS the meter. To my knowledge, this unit has only a few hours use except for testing by myself. (works perfectly) Original inspectors tag and manual included. I do not have the original Johnson shipping box.

I would like to trade for a MINT Small Matchbox with meter + cash. Just have no use for the KW version as I am now on AM exclusively. I will consider outright sale of the KW Matchbox IF I find the smaller matchbox first. If interested, please contact me at 207-767-5143. Thanks! Dick, K1DPM

Source record: 113480

I am seeking the listed gear in good/operational condition.
Other conditions negotiable.

I will pay $40 cash plus shipping for an
Aircraft Radio Corporation C-15 control box.
It is hammertone finish,
has a crank handle on the lower right, A tuning dial on the
right side, a transmitter frequency control with five
positions on the lower left and a "SENS" control on
the upper right. It has two connectors and a spline
cable fitting on the bottom. It is 4 inches wide and
3 1/2 inches tall.

I will pay $30 cash plus shipping for an
Aircraft Radio Corporation type J-10 jack box.
It is 2 3/4 by 2 3/8 inches, has knurled
cable entries on one side and "TEL." and "MIC."
jacks on the other.

$20 plus shiping for an ARC M-11 transmitter mount.
$20 plus shipping for an ARC A-12 antenna.

Open to trades for earlier ARC equipment.

Source record: 113485

Good Day All,

I offer for sale a Hammarlund HQ-120 general coverage communications receiver built in 1938. This one is rough, but works. It is complete minus the bottom cover and a few knobs. The S meter is in great condition as are the original tuning knobs. The case and front panel are dirty, but no dents or major scratches. Might make a very interesting restoration project. I ask $50.00 plus shipping costs. If interesting drop me a line at pat_armstrong@ccm.ra.intel.com

Thanks, Pat - AA7FG, Beaverton, Oregon

I am also intrigued about the absence of some apparently important
receivers in Moore's book. Do you think that the small "gaps" in the
coverage of your receiver (between 4.6 and 5 MHz, 14 and 15 MHz) have been
eliminatory for Ray ?

4902. FT-101B problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-08 00:00:00 UTC
From: "Harley L. Miller" <hmiller@sound.net>
Message-ID: <348CCE4D.211E@sound.net>
Source record: 113493

While trying out my Yaesu FT-101B on battery power (had not done this in years) I got the leads reversed and hooked it up backward to the battery. There is a clunk in the speaker when I turn it on, there are dial lights, but no rushing noise or stations received. I find no reverse polarity diode protection. Is there a fused resistor not identified on the schematic? Anyone have this misfortune and/or have any suggestions? I would hate to lose this fine old rig, it has served me well.

Harley L. Miller hmiller@sound.net

For Sale:

Heath SB300 / SB400 (receiver and transmitter).

SB300 has CW and SSB filters (no AM filter)

Both units are in very good - excellent condition. A few very small paint chips and nicks, but they are in really nice shape. Both work FB; 400 puts out about 110 watts (80 watts on 10 meters).

Includes all cabling to set them up to transceive and original manuals for both units.

$175.00 plus shipping from zip 93401. Might consider trades on SCR-274N items or GF transmitter.

4920. Re: FS: Collins 75S-3C Winged

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-08 00:00:00 UTC
From: glawson@inav.net
Message-ID: <348b83ca.744709@news.inav.net>
Source record: 113608

Yes there are factory built Winged emblem 75S-3Cs. The manual for the winged 75s-3B/C shows pictures of both radios. Winged 75S-3C receivers are somewhat rare.

A converted 75S-3B to a C model will thin lines on the preselector tuning scale, a factory unit will have thicker lines on the preselector. If you get a chance to look at J Miller's book you will see the difference. Also the the factory escusion will say 75S-3C, a coverted unit have a glue on plate which covers the 75S-3B identifier on the escusion.

Hope this helps

GAyle KFLY

> the average price for a good antenna? Your help is greatly appreciated!

Your asking a lot! I doubt you will find a new ham radio for under $100
these days. However, you might find a used radio for under $100 (I
bought a two-meter handheld for $100 in a pawn shop once). The antenna
thing is a whole new issue and the cost could range from a few dollars
for parts to build your own or several hundred dollars to buy and
assemble one.

See http://www.arrl.org for information about all you need to know
about amateur radio and, until you get your license (and even after) see
http://ld.net/?kc5fm for low cost long distance service.

Let me know how more I can help.

Since my post wasn't whining or crybaby I guess you don't mean me. I even provided useful information about repairing the dreadful things.

Why are you against the sharing of pricing information? It's what keeps free markets free. Don't you like free markets? If someone has the appropriate disconnection with reality to think an Ampro is worth $150, and is willing to say so in public, then he'd better be prepared to take some flak.

Bostonian expressed his opinion, I expressed mine, and you expressed yours. Is this a great country, or what?

Have a nice day!

I have for SALE a Commercial quality, old time Roller Inductor which is not made today for any money. It is marked with INK, 12uh, nice condx but needs a little cleaning. Its a great piece, even just for a collection. The roller is 3-1/2 inches in diameter by about 6" long. I can send a JPEG picture to interested parties. Price is $60 shipped Conus!
Thanks es 73.....RICH RLUCCH2098@aol.com

4935. Frequencies of interest to BA'ers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-09 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <66iiq2$519@news.Hawaii.Edu>
Source record: 113504

The following was written by Gene Rippen, and posted on
the Boatanchors email list. This should be of interest to
many of you.
Jeff KH2PZ / KH6

This all started when I finally decided to sort through about 1000+
crystals. I wanted to keep those I could use, and I wanted to sort out
those that were not ham usable. So, I decided to figure out what
BA frequencies I could reasonably anticipate using. The result took the
form of this list of Frequencies for BA'ing, Swap Meets, etc. Now that I
spent most of this cold rainy day doing this, I think I will get the self
gratification of having shared it.

It is a little long, but I believe almost all of you will find it useful,
therefore I trust it meets Jack's approval. I tried to limit it to items
related to BA.

Gene Rippen

FREQUENCIES OF INTEREST TO BA'ers
These are BA nets, Calling Frequencies for BA'ers and Swap Meets.
No Guaranty of accuracy, I have not tried them all.
NOTE: The time is UT.

4938. Help - roller coil with glass coil form?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-09 00:00:00 UTC
From: k5dh@ti.com
Message-ID: <66ji7m$nu3@sf18.dseg.ti.com>
Source record: 113507

Can you identify this?

I have a roller inductor, obviously of military origin, which is wound on a clear GLASS coil form, rather than the standard ceramic form. The form is grooved to maintain turns spacing. It has silver-plated wire, and most of the hardware is silver-plated too. There is a gear-driven turns counter with three digits. Other than the glass coil form, it looks generally the same as any other generic roller coil assembly from the WW-2 era. Any idea where this came from? I picked it up at a hamfest many years ago, and I've had it sitting on display as part of my glass insulator collection. Just curious about its origins. Ever seen one of them?

4941. Pair of NOS RCA 7094 Finals Available

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-09 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <66jljc$q3s@sjx-ixn3.ix.netcom.com>
Source record: 113510

NOS boxed pair of RCA 7094 finals (one box torn),
used in Hallicrafters amps.

Will trade for Drake equipment like:
Good condition Drake AUX-7 board, R4B receiver (no C),
T4X or XB transmitter, C-4 console.
Will discuss other Drake equipment valued between about $100-$200.

"Good condition" means:
At least 90% of original finish intact.
Dusty/Dirty OK as long as cleanable with light work.
No repainted cabinets.
No gouges in the aluminum (light scratches and wear OK).
No drilled holes or unoriginal knobs.
No "improvements" (modifications).
No rusty/corroded chassis
("Browned" copper is OK, but no green or nicotine sludge).

Just a good, working-class rig that has been
basicly taken cared for.

Will also discuss trades for Pre-1946 military equipment
or cash sale.

Well, now, as time goes by the definitions must change, I suppose.
Now-a-days anything built with discrete transistors is pretty much
a (small) boatanchor.
My TS-520's are boatanchors -- just 3 tubes and the rest transistors.
My IC-22A is a boatanchor -- all transistors AND CRYSTALS!!

Run outside and locate the running board on your car. <g>

> Dave AB5S

I don't see how offering pricing information constitutes being "price police." If someone wants to pay $150, I'm not stopping him. I simply pointed out that Ampros are plentiful and are available considerably cheaper, suggested where, and said how much it would cost to get one into shape if the cheaper one weren't in the same mechanical condition as the posted one was said to be.

Sharing pricing information is what keeps free markets free. Your image of "price police" suggests a controlled market, exactly the opposite of what is achieved by free exchange of information.

If someone thinks an Ampro is worth $150, it is proof that there is too little pricing information available.

Bostonian expressed his opinion, I expressed mine, and you expressed yours. Is this a great country, or what?

Have a nice day, Dave!

Hello,

I have two Collins KWS-1 transmiters, one is in CCA Very Good, and the
2nd is a CCA Fair, but could be cleaned up into a CCA Good. Package
includes Hi-Res videos, manuals&copies, antenna relays and many extra
parts (tubes, fuses, etc). I also have a CCA Very Good 75A-4, late
serial number with AM, CW and Std 3.1 filters, and a Collins 32V2 that
might be part of the deal.

I would like to trade, in whole or in part for a very clean, later "S"
line station with a Collins 30S-1. Your units must be very clean, 100%
functional with app. paperwork.

I live in Western New York, near Buffalo.

I can be reached via email at kg2ic@amsat.org or phone via 716/622-0678.

Thank you.

Well Harley,
you've probably blown a few transistors.
So the first thing to do is start with your R.F. board test your
transistors there are only 2 transistors on that one. Than work your
way through (I.F., A.F. etc). Hopefully you didn't blow all of them.

Hope this helps. "73" Gary KF9CM

The XA has a square meter as opposed to the X's old style round meter. Tube line up and everything else is the same...

XA is a very nice RX. Very stable. I prefer XTAL phasing as opposed to a drifty Q multiplier for SW BC duties. Q X'er might be good for ham or comm duty. Internal tube layout is very good. Main and bandspread caps even have dust covers...

The only bad thing about it is that it takes forever to get from one end of the dial to the other.

I have today, reluctantly, decided to sell my R390A. It was manufactured by Imperial Electronics Inc. in 1963. The serial # of this unit is 3012 and it was built under contract 37856-PC-63. The receiver has both meters but no covers. It is in great shape with only slight scratches around the Local Gain control and the KC change. I bought the radio about a year ago from a ham friend of mine. The radio functions very well.

I also have the manual NAVSHIPS 0967-063-2010. I am asking $450.00 for the unit. I live near Dallas, Tx in the city of Mesquite and I prefer not to ship the radio.

It needs a good home.

Source record: 113528

Millen 92200 transmatch - EXTREMELY high quality - hugh silver plated
tapped inductor and wide spaced caps - easily 3KW PEP ++
80-10 meters (works on WARC with my antenna fine) Built in
meter, of course. Standard SPC/Ultimate transmatch circuit.
Makes current top-of-the-line tuners look like toys in comparison!
front mint, just slight marks on top of cabinet (entire chassis
copper) $225 firm but will take small (300watt or less) tuner in
trade for $50-75 depending on type.
Thanks, Walt WB5LJW please email for more info.
73 for holidays

Hickok 123A Cardmatic Tuber tester For Sale

Pinnacle of the Hickok line. Uses mylar cards instead of switch settings to set up tube characteristics. Dynamic mutual conductance. Looks great and works great as long as contacts are kept clean--cards sometime must be inserted several times to make good contact. With original manual. $110

Hi Harley
I do repairs, and the last two weeks I had seven 101. I'm quite
familiar with these radios. Let me ask first, does your S meter show
any deflection? If it does then more than likely the first thing that
goes
is the very sensitive audio amp IC it's usually a 214 on the Es on the
early B' they used an SK### anyway let me know if it works on AC, If it
has transmit? or if it shows any movement on the S meter. Maybe I can
help you. ck

Don,

There is a 180 Ohm, 1/2 Watt resistor running from
the power switch to Pin-1 of V-2 (50C5).

W7FG Vintage Manuals has a decent copy of the manual
available for $16 + $3 S&H.

Suggest leave the erstwhile gear-flipping boy alone; he'll learn in time, and go back to painting cars or whatever.

Perhaps he's no worse than the guy that actually shows up at the widow's, gets $600 of good stuff for $400, stuffs his pockets with other rare bits when he thinks I'm not looking, begs for more freebies, whines thoughout the process, then later cries like a stuck pig when he finds out that one little contact in a rare old beauty needs his minor attention. Think I'll start wearing the Colt when they come, or maybe request results from an MMPI by a licensed psychologist beforehand.

Guess we're all imperfect at times, but it seems tough to find many of the right folks outside of Jack's list, and were it not for the occasional presence of a few great guys on this NG, many of us wouldn't bother reading it. If L*rry D**go is running a training course for the others here, he needs to tighten up the curriculum a bit. :-)

OK, I promise not to complain here again for the next 365 days!

BTW Ben, if you see this, the link to your currently posted ad isn't working up here - dumps me to C-serve something. Can u repost?

Merry Xmas to Don, Gene, Sandy & the gang.

Frank A.

Message-ID: <348DEFE6.3357@advicom.remove.net>
Source record: 113544

I'm still looking for a DRAKE RV-4C REMOTE VFO. I would like to connect one to my TR-4C transceiver. I've not yet worked any foreign stations (except Canada), but people tell me you need a remote VFO to separate your transmit and receive frequencies for DX work.

Is this really necessary? Is it likely I could work a lot of DX while trans/recv on the same frequency? Or would a remote VFO be a big plus for DX work?

Tom KD4AKC

4984. Old Military Transmitter

Newsgroup: rec.radio.amateur.boatanchors

Hi folks-

I have an old military transmitter made by Western Electric for the US ARMY SIGNAL CORPS. The model is BC-459A and I am thinking about building a power supply for it and getting it on the air in the 40 meter band. The tuning dial is marked 7 - 9.1 MC. I believe it uses 1625 tubes and I have several of them.

Anyone out there done this before? Can you offer any tips to restoration? And does anyone know what kind of stations/vehicles/airplanes this slide-in, rack mounted transmitter was originally used in? As there is no apparent means of modulation, was it CW or was there an external modulator? AM only?

Thanks- Tom KD4AKC

Source record: 113548

This radio was part of the SCR-274N WWII-era aircraft command set series.
The matching modulator is the BC-456. There were scads of accessories
like racks, dynamotors, cables, control boxes, etc, now all hard to find.
DO not modify the rig if it is still original as it will fetch $50 or so
from military collectors in original condition. Happily, it is quite
usable in its original state.
Huge amounts of info were published on using these sets in the ham bands
including a whole book by CQ magazine. SO you should have no trouble
locating data.
Good luck!

Electronic timer assemblies and components.
All items located 10 mi NW of Philadelphia, PA.

DYNAMIC TECHNOLOGIES INC. P/N 88052002 timer assembly

Printed circuit, single board. Digitally counts power
line frequency to generate four precision timed intervals
of 15 sec., 30 sec., 1 min., and 2 min.; also manual
start/stop. Accuracy: +/- 1 cycle of line frequency.

Control; manual input via membrane switch (or equivalent).
User selects one of 6 options on keyboard (DTI P/N
88052003) start 15 sec, start 30 sec, start 1 min, start
2 min, start continuous or stop. On-board piezo loud-
speaker beeps for each keyboard entry. Last command
entered cancels previous command or command in progress.

Power input: 120/240 V 50/60 Hz. Frequency and voltage
selected by jumpers on mating connector (A/MP P/N 1-480287;
requires up to 10 ea. A-MP P/N 60617-1 pin). Connector is
available from A-MP or their distributors. Grounding is
required for best noise immunity.

Output: Normally Open (NO) relay closes during timed
period. One terminal of relay is connected to one AC line
terminal (pin) on the connector; other relay contact to
independent pin on connector. Relay contacts rated 30A
resistive: printed circuit designed for 5A load. External
varistors required for inductive loads; can be mounted on
mating connector.

Timer overcurrent protection; 2 ea fuses, 2AG, 1/8 ampere
fast blow, (Littelfuse P/N 225.125 typical) in clips on PC
board. 1 set of fuses is installed on board.

Size: PC is 4-1/2" X 6" X 1-5/8" overall. Mounting
centers 4" X 5-1/2". Designed to mount with four nylon
snap mounts, RICHCO P/N DLCBS-4-01 typical. 1800 available;
104 timers per carton; shipping weight: approximately 60 lb/ctn.
4000+ matching membrane switches included in lot.

$2000/lot
****
2AG-1/8A fast blow fuses, Littelfuse P/N 225.125.

The SP-600 I had the use of for many years did not have a cabinet. It
was meant for rack mounting. I don't know whether Hammarlund made
a cabinet for it, or you were supposed to use a standard one if you
really needed a cabinet. Such cabinets were available. They were like
a very short rack, with no bottom (at least the one I remember didn't)
and a lid on top. I can't remember what the back was like.

So I would think that the poster has not tried to jam a Super Pro
into a Hallicrafter cabinet meant for a specific receiver. He must
have one of these small desktop racks that the SP-600 fits into
perfectly. Though I am wondering what there is about it that
makes it worth mentioning that it's a Hallicrater cabient. Is
it so marked, or what?

Hallicrafters SX101A and HT32B for sale. Recently acquired from original owner - The City of Greensboro, North Carolina. These units are in excellent condition. Very few scratches on both units and no scratches on from panels. The insides are real clean and do not have any corrosion on the inside. All original tubes and components. No modifications from original. Both units perform well and cosmetically look excellent.
Original purchaser - The City of Greensboro, North Carolina, purchased these units new for the Civil Defense group. The stickers for the CD are on the corners of both units and inventory stickers with serial numbers from the city of Greensboro are located on the rear of each unit. These units were not turned on till this past week for the past 15 years. I carefully raised the line voltage up voltage after carfully cleaning these units. Locals tell me they were in storage since the late 1960's as they were moved from there original operating position after the city constructed a new building.

Looking for a good collectors home. Asking price $775.00

Many BAs went into the "short rack" style cabinets you mention. The SP-600 is deeper than most other BAs, so it won't fit into the usual cabinets of this style (for example, the desktop cabinet for the R-390/390A). Hammarlund bought specially-made cabinets from Premier Metal for the SP-600, and they appear to still be available from Premier (at a price). Some companies made or used short rack cabinets that had no backs, and the SP-600 will fit into these (hanging out about 2" in back).

I am missing the cable from the Power Supply/Spkr to the rig. I can make one up if I can find the proper plugs. It takes an 11 pin octal , male and female. Can't find them locally or in Mouser. Could rig something up, but if anyone can direct me to a source that has them, it would help me a lot. Thanks. James W5LWU

The SP-600 in a Hallicrafters' cabinet is definitely plausible.
Hallicrafters made a military cabinet version of their SX-73 receiver
(R-274). This receiver was sold in a Hallicrafters' cabinet when it was not
used in a rack mount configuration. The Hallicrafters' cabinet even had a
military nomenclature tag affixed to its top, and had two latches on the
front top for opening the top lid. I have seen one SX-73 / R-274 in one of
these cabinets, and the SP-600 would have fit into it, as the dimensions
were identical (the military also assigned R-274 as the nomenclature to the
SP-600). I would assume that Hallicrafters sold some of these cabinets to
the military, as they were identified with their own nomenclature.

Interesting, I saw a SX101A and HT32B at the Greensboro Hamfest this past weekend. Asking price was $140.00 each. Had Civil defense sticker on the top right front corner. The HT32B had a large dent in the right front corner. The bandswitch on the SX101A was very sticky. The owner had stored the equipment in an uncontrolled environment for three years or so. Basically rigs that were all there but needed a complete rebuild. I wonder if they are the same radios???

Wollensak T-1515 Stereo Reel to Reel compact recorder. Beautiful 1950's retro stainless steel tube powered design. Purchased off nephew of original owner, so the unit is in excellent shape for it's age. You won't find many like this! Has original Wollensak mike and carrying case/protective cover with latch-down accessory pocket with Wollensak embossed in it. $200 plus S&H. Have photos to email if you want to see.

I think there are some hairs being split here.

Single rackmount cabinets that take a 10 1/2" panel were and are common. Many of the period were made by Bud, might/might not be branded by others, and might house almost anything that would fit. Many of the Bud boxes have chrome trim strips with red stripes above/below the panel opening. FWIW, the SP600 is deep, and won't fit in standard-depth rack boxes. I have one of the Buds myself; happens to be blue hammertone with those <gasp> fugly strips. The original civilian Hammarlund boxes I've seen have been grey wrinkle, though there are other posters who have seen more of them than I have. Word has it that orig H-lnd cabinets are going for about what I think the rcvr alone is worth. There are four bazillion rackmount SP's around (surplus) without cabinets.

$200 MAX?? The Dachis price guide shows the pair going
for about $360.00. $775.00 may be a bit of wishful thinking, but
you are just as far out of touch with reality with that $200 price!
Dachis also shows the SX-28 going for $125 to 225. When
is the last time you have seen an SX-28 go for anywhere's near
guide pricing? I'd bet the pair goes for over $400.00.

First, thanks for not using all-caps. It's a major improvement.

Your asking price is once again high enough to deserve comment.

These are respectable tape recorders, readily available for $25-75 from antique dealers and in plentiful supply for less at flea markets, hamfests, and garage sales. They are almost always in very nice shape because the materials used wear well and the mechanics are quite rugged.

Webcor Regent Coronet Stereo Model #2380-1 reel to reel. Made in Chicago. Excellent running tube unit from late 1950's or early 60's. Has separate optional Webcor compact mini-suitcase speakers that fold into little suitcase. Handles 7 inch reels. Has top-end options for its time. Weighs about 38 lbs by itself. No mikes, missing small piece of cover plate on bottom, have SAMS photofacts manual for unit. $200 or best offer plus S&H. Have photos if you wish me to email them to you.

Will consider trades all or in part for Civilian or Military tube tester as well.

Homebrew

Hi all,

It has been a few weeks since I posted anything to the group, but in case you do not know, I have put a few circuits on my homepage. The latest was the G8TGL Terminal Unit which was originally designed to power an old teleprinter. It worked well on the HF bands although it needed a good filter (or a strong RTTY signal).

There have been loads of comments about the transmitters, but surprisingly, the BUG FM transmitter is still the most popular of the circuits!! Isn't it funny how amateurs like to play!!

I am still working on my all valve General Coverage receiver but the last two bands are a bit slow. I have been abroad a couple of times and don't seem to have much time.

Anyway, the URL (the new abbreviated URL) is:

http://come.to/sm0vpo

It is easier to pronounce on HF SSB.

Hope you have some fun with my circuits. Best regards and Merry Christmas. Regards Harry, SM0VPO (ex G4VVJ / G8TGL)

I have a James Millen # 92200, 3KW+ antenna tuner. It uses coax in and coax out, 80meters through 10 meters, with relative power meter, measures forward or reflected power.

The case of the tuner has been repainted light gray, the face is original, and in good condition. The tuner works exelent.

I will ship this tuner, UPS ground, to lower 48 states, for $225.

Call (810)445-8175 or e-mail : n8htv@flash.net

>in excellent shape for it's age.
>>$200 plus S&H.

Hey so am I, but I can't get $200 for that either.

While this is clearly a different animal than the institutional models offered here, even the T-1515 is not an model uncommon enough to draw a $200 price tag. However, it is possible that you may find someone for whom the convenience of a quick sale, and the desire for this unit make $200 a bargain. However, I would not hold my breath; this machine at its best, is not worth this kind of money. Tape formulations today and the machine's limited adjustment in record bias current, make any reasonable performance a challenge to say the least. Many cassettes will outperform it. For less.

Collector's value on this machine is limited, and nostalgia is not worth $200. You would be better off, on this board at least, to hold your speculative ventures to board topic: Boatanchors.

But if you're interested I have a similar vintage Tandberg stereo machine that I'd be glad to turn loose of. I'll take you best offer. I'll assume its in the same league as your asking price.

This sloping desktop rack unit is 25-1/4" H and 12" D at the base,
narrowing to 2-3/4" D at the top. Standard rackmount width. Flat black,
in very nice condition with the usual few scrapes and a couple of minor
rust spots.

Even a desktop unit like this is heavy, guys, and I don't wanna ship. I'm
in Maryland, right outside Washington, D.C.

Tell me what's fair. $50? A mint NC-183-D or HRO-60 with full coil set?

Regarding Johnson Messenger transceivers:

I bought one several years ago and used it in the last sunspot cycle peak on 10 meters. The rocks for 29.030 cost me more than I paid for the radio. Mine is the Messenger One (so-called "white-face"). I have not "jumped" the radio or installed the "Christmas Tree".

For those that don't know, the CB'ers coined these phrases decades ago when the Johnson's were popular and the need for increased power was in demand. "Jumping" a Johhny One refers to jumpering the B-plus screen dropping resistor with a wire. "Christmas Tree" refers to substituting silicon diodes for the rectifier tube. These mods were supposed to juice up the Johhny to 10-15 watts output. I doubt if this ever was realized, though...maybe 5-8 watts was more like it.

I have worked several European and other DX with 3-watts coming out of my Messenger with a 3-element beam...see you on 29.030 MHz next time band is open.

Article Reprint from August 97 Monitoring Times Page 72
"The World of Ham Radio"
A Gem of a CD
Ike Kerschner, N3IK

Have you ever stumbled onto something truly valuable? Remember the surprise, the thrill? You can experience that same feeling when you examine a copy of the CD-ROM software by AMSOFT called "The World of Ham Radio"! This is one of the best bargains I have laid my hands on in a long time.

This CD has been around for a few years, and I have seen it for sale at several hamfests. Several years ago I looked at it and felt the CD provided a decent call book with some nice software.

The latest copy, however, knocked me over! I held a copy of it for several weeks before giving it the once over, but after I started I couldn't stop. Programs that I had on separate disks were available to me in one location with an excellent menu, and moreover, they would run directly from the CD. For many years I have collected shareware at the price of 2 to 6 bucks a disk, finding many I liked but a lot more that were just ho-bum. If I were to add up the cash laid out to come up with a handful of decent programs I am sure it would be several hundred dollars.

"The World of Harm Radio" is a collection of excellent software, in fact, almost all of the programs I have chosen over the years as being the best are on this CD, plus a lot more, to boot. All of this and a call book, too! Looking up a call is a snap in AMSOFT's "World of Ham Radio." But, let me give you a brief tour of what else is on this CD.

When you type CDVIEW, a listing of many different subjects is presented to you. Choose "Antennas," for example, and you will find 26 different antenna programs that will provide full information on a host of antennas, from simple long wires to yagi and complex loop antennas.

"Basic programs" are a wide range of simple programs written in BASIC which will run directly from the CD. Examples of the Basic listings vary from antennas to z calculations.

Twenty-six different programs deal with Morse code - from learning programs to programs that will allow you to send Morse from your computer keyboard as well as copy code via the computer and shack receiver.

A variety of engineering programs are included, among which are a a simple-to-use CAD program for drawing schematics, a program to lay out PC boards, and tools for designing specific circuits.

Eight different logging programs give you anything you want for contest logging, general logging, and certificate hunting.

One program I particularly like is a training manual for the oscilloscope. As you go through the Oscope manual the computer shows demonstrations of what will appear on the screen of your oscilloscope under different testing situations. Last Christmas a good friend wanted more info on using an oscilloscope and we spent several weekends going over the use of the instrument in my shack. If we had this program, I am sure my friend would have learned a lot more a lot faster.

Equipment modifications also are included on the "World of Ham Radio" CD. I examined all of the mods available on the CD and am anxious to try several, especially one for a scanner I have. Not every piece of equipment is covered, but there is a lot!

Eight propagation programs allow user to determine the best time and frequency to work various parts of the world.

Included are 36 packet programs from very simple to very elaborate terminal programs, information on using packet, and circuits for various packet projects. If you ever wanted to try RTTY, 10 programs on this CD will let you get your feet wet in this interesting mode with minimum outlay.

A very interesting listing for satellite comm- unications provides info on operating and tracking programs, again from simple to fairly complex. There are several programs for SSTV and WEFAX that I am just now beginning to explore.

As always, there is a "Miscellaneous" listing containing 89 programs which I have only begun to explore. There is also a question and answer section that deals with many subjects, Scanner buffs and SWLs will find a lot of good information on this CD: frequency lists, data bases, modifications, and more.

In short, "The World of Ham Radio" gives you hundreds,
if not thousands of dollars worth of information on ham radio,
and all at a price of $29! If you have a CD drive on your
computer, grab a copy ASAP. If you don't have a drive,
consider putting one on your machine just so you can
use this super CD.

Ike Kerschner, N3IK

hello,
i have a kenwood ts820s for sale. has the 500khz cw filter in it.
the rig has a problem on 160meters. it will not hold freq. don't know
what the problem is and not going to find out. santa brought me a
ts450s/at. all other bands work fine. 120w on cw and 90w on ssb. the
reading is through my mfj tuner. has copy of manual and mc50 desk mike.

asking $200.00 for the rig. the desk mike and cw filter is worth
$150.00. will help w/ shipping in the lower 48 from zip 33830.

73 and merry christmas,

5041. Heath Kit Warrior Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-11 00:00:00 UTC
From: Randall <ke4yzn@wwisp.com>
Message-ID: <3490D0E2.3C79@wwisp.com>
Source record: 113460

I am looking for a Heath Kit Warrior (model # HA-10) amplifier
operations and assembly manual.
I have a big inventory of Johnson manuals
Valant 1&2,
Ranger 1&2,
Viking 2,
122 vfo,
1 KW Desk
All good copies of original manuals not a copy of a copy.
I would trade copy for copy or buy a copy of the "ha-10" warrior
amplifier manual.
Thanks Randy

5044. FS: 1950'S AMPRO VINTAGE REEL TO REEL

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-12 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <66qdh2kcl2@csu-b.csuohio.edu>
Source record: 113320

FS: VINTAGE AMPRO REEL TO REEL RECORDER

A CLASSIC COLLECTABLE VINTAGE AMPRO REEL TO REEL RECORDER

AMPRO CORP MODEL 758 TWO SPEED HI-FI REEL TO REEL TAPE
RECORDER -- MID 1950'S IN NICE SHAPE & EXCELLENT WORKING
ORDER

- GREAT 1950'S ERA BEAUTIFUL STYLING & DESIGN WITH:

* COCOA BROWN CONTROL PANEL & GRAY KNOBS/BUTTON AND RAISED
GOLD AMPRO LOGO.
* MATCHING COCOA BROWN CARRYING HANDLE AND AMPRO LOGO
COVER LATCH
* HAS GRAY SHARKSKIN CASE WITH FULL-FRONT BASKET WEAVE
SPEAKER GRILL. Just a great looking unit if you're a
1950's buff & love that styling.

- GREAT UNIT FOR REEL TO REEL COLLECTORS OR FOR SOMEONE
WHO JUST WANTS A GOOD OLD FASHIONED HIGH QUALITY MONO
UNIT.

- HAS ORIGINAL SHURE MICROPHONE MADE FOR AMPRO (MODEL #189).
IT'S ENAMELED TO MATCH THE REEL TO REEL AREA SHEET METAL
OF THE INTERIOR -- A NICE TOUCH BY AMPRO CORP.

- Ampro made high quality tape recorders in their time and
seeing this unit is an example of it.

Great sounding and EXCELLENT running unit for it's age.

The interior panel is like new and the case shows some wear, but
very minor for a unit of this age. We're talking about 40+ yrs!

- SIZE (APPROX.)

16 5/8" WIDE x 10 5/8" HIGH x 16 1/4" DEEP

- WEIGHT (APPROX.)

38 pounds (fan cooled) TUBE POWERED

CONTROLS:

- Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

- Green Eye Tube Recording Level Indicator

- OFF/Volume Knob

- Treble/Bass Knob

- Buttons
* Record & Lock
* Forward
* Rewind
* Play
* Stop

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- External Amp or Speaker

- Remote Control On/Off Switch & Plug

Handles 7 inch reels.

Plus shipping and handling which won't be much, because I'll pack it free (the buyer will save there). To take it to a professional packing place can cost quite a bit--I hope you agree. Also, to show my gratitude to the buyer, I'll bring it directly to UPS instead of using a local private shipping store which marks up the UPS shipping costs 40% to 60% which is the practice for these stores in order to stay in business.

The asking price is $150 or best offer, since this unit is in fine shape and not what you would normally expect for a collectable vintage unit. The fellow I bought this unit off of refurbished the mechanicals (his hobby) and gave me a copy of the SAMS PHOTOFACT FOLDER he used with it to work on it. This edition is for the Ampro 757 & 757-A, but is close enough should the unit require maintenance in the coming years. I'll throw that in too.

I can email a color photos of the unit for your review, if you wish in the .jpg file format. If you can handle a zipped .jpg file let me know.

Thank you.

Oh, man, now you're going backwards. You'd made so much progress, and now you're shouting again.

I can repeat myself too, but isn't it kind of pointless when everybody's already seen both posts and this really isn't the place for audio equipment ads in the first place? The entertainment value of even a scintillating exchange like ours is only so high.

For those who might have missed it on Sunday:

A new-in-box Ampro should fetch $25 tops, $35 from someone who had one as a kid and just can't live without it. You can find cosmetically very nice ones at any hamfest or local flea market for $0-$5. Mechanical refurbishing takes about a half hour and the parts cost about $15. By any standard they're dogs.

Woof, woof!

(And again, please stop shouting. If you are too lazy to use the shift key, turn the caps lock off and just use lower case.)

Robin,

I do not have any Heathkit manuals to trade but am a collector of BC-348 radios and accessories. I do not
have an origianl manual, only photocopies. I would like to purchase your BC-348 manual if it is still available
and you are agreeable to selling it rather than trading. If you are interested please let me know your price
on the manual.

I tried to email you at the address you used in your post, rdevor@ibm.net, but the mail was returned.

Regards,.

5060. RE: Anonymous@REPLAY.COM WHO HATES my FS POSTINGS ON REEL TO REELS

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-12 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <66rvb0bqv1@csu-b.csuohio.edu>
Source record: 113336

I was wondering about the posting profile of the person who calls himself "Anonymous@REPLAY.COM (Anonymous). He usually BLOCKS his email address to postings in this group, but has failed to on some. This person has great problems with my postings regarding tape recorders. To him, I say "get a life" and go buy all the stuff he brags about and sell it for that. I've done nothing to him. It's a free country and everyone is allowed to express their views whether they're credible or not.

As of 12/12/97 I used the Deja News Search engine and with its Power Search engine feature for an author posting profile which using this person's email address attached to a response this person posted to one of my Ampro Reel to Reel for sale postings. I was trying to figure what makes this person so tick. Read his (I assume) posting profile and draw your own conclusions.

Apparently, the results were very prolific in many groups according to Deja News' Search engine. Here are some to me of the really far out examples of groups to be posting in--perhaps not to others--hey we all have different lifestyles:

Postings Newsgroup

1172 alt.sex.stories
891 alt.amzaon-women.admirers
571 alt.sex.spanking
504 alt.cracks
351 alt.sex.femdom
319 alt.sex
311 alt.politics.white-power
148 alt.sex.erotical.marketplace
126 alt.sex.telephone
78 alt.sex.anal
78 alt.sex.fetish.wrestling
54 alt.sex.fetish.diapers
33 alt.sex.watersports
17 alt.teens.penpals

The above is just a sample--go check it out yourself for an unbelievable profile. I thought I posted alot..., but not to such groups as the above. This Anonymous person usually BLOCKS his email address to postings in this group, but one of his postings has the address.

A warning--now I don't know the accuracy of Deja News' search engine for an author profile of postings and all these above. Deja News used with it's power search feature could have produced errroneous information. If that is the case my formal apologies.

I'd suggest that I not offer any opinion or judgement positive or negative whatsoever about this character -- look him up yourself and draw your own conclusions.

Mr. Anonymous--are the Deja News search results on your postings correct?

Thank you

>I wonder. Do you have an internet account AND a brain? Or just an
>internet account?

It's a common problem, Grant. Whenever you lower the requirements for something, the lowest common denominator heads toward the basement and you start attracting more bottom feeders.

Before someone thinks I am referring to Amateur radio, I should clarify that in this case I am referring to the Internet, where any idiot with a PC and a phone line can demonstrate their ignorance and lack of manners for all the world to see.

I dearly hope these people never ever learn and actually use CW, because then there would be no avoiding them at all. Yeah, we have jerks on CW, too, but somehow they seem to have earned the right. I doubt these Internet children have ever earned anything.

Oh, well, I am sure this will generate another rash of food fights and temper tantrums, but that is to be expected.

73 to you, Grant, and all the other good folks out there.

Annonymous then said:

>These are respectable tape recorders, readily available for $25-75

For the record, I picked up 3 of this model from a local
Elementary school that was going to dump them after not
selling at a surplus 'garage sale'. They are in really
nice shape - I couldn't resist the quality construction.
All 3 work like new, and are not scuffed up.

I bought 3 of them, plus a pallet of TRS-80 Model III's
with software - WHOLE LOAD $25.

The other 10 units went to a recycler. I guess if enuf
get dumped, the value could likely climb in years to
come. MANY years.

Just my $.02

We're glad to see that all the all-caps are gone. Thanks.

FWIW, the Webcor may have "top end options for its time," but Webcor never made any "top end" tape machines even in their time. These usually sell for $20-$35.

Did you pick these machines up for $25 each, put an hour into cleaning them up, and now want $150/hour for your efforts? Or did you pay $125 each and want to pass on your mistake to the next unfortunate owner?

There seems to be a pattern developing here. Are you trying to establish prices for antique dealers to quote to unsuspecting customers, or for inflated insurance valuations?

Hi Lumpy,

A TR-3 was my first SSB rig and I had a ball with it. Never experienced the same problem as yours but here are a couple of things you might want to look into.

Assuming you are getting sufficient microphone output and the transmit audio end is functioning okay (I'd still try a fresh 12AX7), someone may have tinkered with the carrier balance circuit. If you have access to an external receiver, put on a set of headphones and listen to your transmitted signal. If it is extremely tinny and without low frequencies, this could be your gremlin. A severe maladjustment in this stage of the rig would greatly limit the passband response in SSB mode to the extent that very little signal would be applied to the final output tubes. This may explain why you have signal output on CW but not SSB. The TR3 manual has a section on Alignment. It can guide you through this.

Working entirely from memory (back to 1963) I seem to recall that the receiver passband response tracked with that of the transmitter when these adjustments are made. So if the received audio is overly tinny there's a good chance the right adjustment will give you an improvement there, too.

One other thing, 100 watts is low for a TR3. With the 3 output tubes, 200 watts or better should be expected. You might obtain this by replacing the final tubes and/or going through the alignment steps in the manual. It is not a difficult procedure and is very rewarding when you make an adjustment that immediately improves power output!

Bostonian,

I'm sorry you feel I have been unfair with you. I have tried to keep personal comments out of my posts and to keep them on a strictly informational plane. I have tried to achieve a certain jocularity as well, which maybe I am not so good at. If I have offended on this count, I apologize.

I will not apologize for supplying accurate market information. You say that the market should be free and open -- I agree. And markets are free and open when all participants have access to reliable pricing information. The machines you are selling are plentiful and trade at far below your asking prices. Notice that I'm not the only one who has pointed this out.

When asking prices get above double or triple the fair value (and yours are much higher than this), it looks as if the seller is trying to exploit the ignorance of potential buyers. Such a market is not free -- it is seller-controlled. So to *keep* the market free, disinterested third parties sometimes provide the missing pricing information. This is what I have done. I have tried to be collegial about it -- if I have failed in that aspiration, again, I apologize.

5086. ICOM R71A power supply fix

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-13 00:00:00 UTC
From: pierfelice <pierfelice@NoToSpam.MCI2000.com>
Message-ID: <01bd0764$ed2e4b00$LocalHost@default>
Source record: 113356
Cross-posted to:
rec.ham-radio,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.shortwave

My R71A had power supply trouble as many have had or will. The design of
the supply results in poor regulation and AC ripple on the supply output.
My solution was replacing the active components with one ECG1954 low
dropout 12 Volt 1Amp 3 terminal regulator. The ECG1954 requires but 13
Volts at it's input to function unlike other 3 terminal regulators that
require about 16 Volts (such as the 7812). The ECG1954 is a TO220 case as
was the original pass transistor Q1. Cost of the ECG1954 was $5.
Basic steps I performed:
1) Remove the regulator unit from the radio.
2) Remove the PC board / transformer from the regulator unit frame.
3) Remove everything on the PC board except
C11,L1,F4,D1,C3,C4,C5,C6,C7,C9,T1
4) Install the ECG1954 where Q1 used to reside. Note that the mica
insulator is no longer necessary on the heat sink and can be removed for
improved heat transfer.
5) You will have to jumper the input and output pins of the ECG1954
appropriately. Add a jumper from the cold end of the fuse to the ECG1954
input. Jumper from the ground side of C7 to the ECG1954 ground pin and
jumper the ECG1954 output to the radio's DC input. I removed J2/P2 from my
radio.
6) I also glued a rubber grommet on top of T1 to contact the bottom cover
and reduce vibration induced in the cover from T1's field.
7) Put the radio back together.
Note that this fix may not work with other than "bare bones" R71's. Mine
does not have the crystal heater, FM, remote or any other option. The radio
uses almost 1 amp as is and radios with more options may require a second
regulator.
How does it work? Great! Even though the radio was designed to run at 13.6
Volts, mine runs fine at 12. No hum and stable down to 105 Volts line. I
also installed an International Radio (WWW.QTH.COM/INRAD) Fox-Tango CW
filter at the time of this modification and I am very happy with the
filter's performance.

From: jeffreyh@Hawaii.Edu
Message-ID: <66sqku$oal@news.Hawaii.Edu>
Source record: 113361

Received the latest Fair catalog and have fallen for the T-784 transmitter ("3 to 22 MHz CW in bands 3-6, 6-10, 10-17, and 17-22 MHz at 10-15W...tubes 2E26, 6AC7... $24.95"). I *must* have one.

Does anyone have experience with this xmtr? Are those tubes still readily available? Is the rated power input power? (Fair sells transistorized xmtrs too - not sure if they use in- or outpower power ratings). What era was this xmtr in use?

I'm actually thinking of buying the RT-3 transmitter; besides the lack of code-burst capability, are there any other differences between the T-784 and the RT-3? Why such diverse model numbers?

Enjoy the weekend!
Jeff KH2PZ / KH6

5097. eBay Auction Web - something to think about.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-13 00:00:00 UTC
From: mc@shore.net
Message-ID: <66tavi$bs0@northshore.shore.net>
Source record: 113367
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I have been following the discussion of eBay in these newsgroups with some interest. Recently I have tried using the service to dispose of some superfluous equipment in my basement and have mixed feelings on my experiences.

There are two radio sections on eBay - one under Consumer Electronics and the other onder Collectibles. There is a LOT of stuff to choose from. Many have pictures and detailed description. Everyone using the system has to register. The charges are very reasonable compared to other auction facilities in the real world. There is no buyer's fee and the listing fee ranges from .25 to $2.00. Commission is 5% up to a selling price of $25.00 and 2.5% over that. They give you a $10.00 credit line otherwise you have to open an account. They would like your crdit card to hit up every month for their fees but other arrangements are available too.

The neat thing about the eBay community is their user feedback section. Both sellers and buyers can post praise, neutral or critical comments on each other. So if you are a buyer you can check out the seller's references before you bid. Its pretty cool stuff!

However, there is a downside to eBay.....

I have advertised and sold about 10 items on eBau ranging from some collectible shoulder patches to Heath test equipment to an old Konica camera I had lying around. Most of the buyers sent in their payment fairly promptly but there were three transactions that are still pending long after they should have been consummated. I get all kinds of excuses and promises but it is becoming apparant that these people are deadbeats and have no intention on making good on their bids. Their word means nothing! Yet as high bidder they have kept someone else from enjoying the items and inconvenced the seller as well. My only actual recourse is to post this information to the user feedback area and hope someone else might be spared wasting time on them.

Contrast that to using these newsgroups and the relevent mailing lists here on the Net. I can't remember an occasion when someone I dealt with online (or over the air) didn't prove true to his or her word. I know it happens from reading the rec.radio.swap but so far I guess I have been lucky.

At any rate I feel that if something is available on eBay the seller or anyone else for that matter should be free to advise the pertinent newsgroups but should put eBay Auction in the subject line so as to quickly inform everyone the nature of the post and so that those who do

not use eBay can ignore it.

73 and a Happy Holiday Season from snowy Northern Vermont, USA!

Cynthia and Michael Crestohl,
(VE2QF) (W1RC/VE2XZ)

I have never considered us at anything other than peace (nor, BTW, do I "hate" you or your posts). But I haven't agreed to refrain from further comments on your posts. Of course, there will be no occasion to comment if your asking prices are in the general neighborhood of the fair value of the items.

If you can find willing buyers at 5-10 times the fair market value when information about market value is available, more power to you. But people who know the fair value of things needn't sit by silently when sellers suggest that their goods are worth much more than fair market value, which your DejaNews posting history suggests that you do with some regularity.

My quuestion is, how are you making the proclamation that an item is
being priced above FMV? Are you a certified appraiser of this
merchandise or are you merely expressing your opinion? Items that
have one value in New Hampshire might have a different value in New
Mexico.

I do agree that some items are offered at much more than I would pay
or even think of paying but!

Just wunnerin

I have for sale a new in orig. box R-54/APR-4 receiver and a new in box TN-17 tuning unit for the R-54/APR-4. I am asking $300.00 for the receiver and tuning unit. If you think my price is to high please make me a offer. I also am interisted in trades. I am looking for navy receivers navy ship clocks and navy tech. manuals.

5108. Do Swan/Galaxy finals really need to be matched?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-13 00:00:00 UTC
From: rzaruba@qni.com
Message-ID: <882029183.1398145026@dejanews.com>
Source record: 113378

Boatanchor Group:

How important is it that the 6HF5 and 6LQ6's used as finals in Galaxy and Swan rig be matched? I've always heard this is important. Is it really and can anyone explain why?

Also looking for repair source for Galaxy, Swan and BC-348 any help would be appreciated.

Thanks,
Bob - WA4AFJ

Check out the VE4YH Swan Page... Lot's of good stuff! It's at:

http//:www.pcs.mb.ca/~standard

I don't know about others but I don't match them. I could not afford to at $45 per tube (New). I have heard others say it shortens tube life or makes it harder to neutralize the PA but I have not noticed it on my 350, 500 or 1200-X (which uses 4 of them!).

I guess it made some sense when they were only $4.95 back in the good ol days.
(When every drug store had a tube tester and you could actually fix your own TV!)

I suspect it might be a concern if two different brand tubes were used --
especially regarding neutralization. Or mixing an old used tube
with NOS.

This happens on occasion. So goes the real world no
matter where you do business. I have been ripped off
on one deal I was mislead about. The guy said I was
buying a scale and it turned out to be just a 20 year
old display for a scale. About 5% of my sales don't get
paid for, going the other way. I have been through this
weather in a storefront for 25 years or on the web.

I am actually pleased with how well my buying and selling
on the web have been. Surprised too. It turns out that
most people are quite honest.

> Contrast that to using these newsgroups and the relevent mailing lists

And on this point, I have been guilty of posting FS: and
not FSeBay:

I had thought of doing so last time with a scope I posted. I
will do so from now on. eBay has been a great forum for me.
Overall I have no gripes with all I have sold and bought there.

Best, Dan..

Source record: 113392

Peter Gottlieb wrote:
> what is a APR-4?

It was the last WWII evolution of the 1939 General Radio P-540 microwave receiver, almost exclusively used throughout the war for radar ECM. It went through several incarnations to reach this level of sophistication - the Navy bought it as the ARC (after the ARA command RX and ARB liason RX), the Army the SCR-587, then the joint (mostly Navy) AN/ARC-1, and finally the AN/APR-4. The set eventually had five tuning units associated with the mainframe - TN-16, 17, 18, 19 and -54, covering 38MHz to 4 GHz. Postwar, it was redesigned with miniature tubes as the APR-4Y, before it went the way of all military equipment. It was used through the late seventies by third world countries. For a builder/experimenter, this is a WONDERFUL receiver test platform! It uses a 30MHz IF, which matches the trend toward higher frequency IFs, and the plug-in units are plentiful and imminently modifiable for experimentation. I won't comment on prices, other than to observe that its market is somewhat limited to builders and those few who are into the WWII ECM equipment as I am. There are also some peripherals that are desirable, like an APA-38 panadapter and an APA-6 or 11 pulse analyzer.

One other possibility, so that you don't have your sale
dragged out too long - - Once you cut your losses with
the "high" bidder, call up the bidding history for the
item, and contact the "runner-up" - - the history will
give you their e-mail and what they bid.

= = = = = =

I've not been an eBay seller but have been an active bidder
on telegraph items, scout memorabilia, and pottery (the
latter for my wife). I've found the vast majority of the
folks I've dealt with to be honest, prompt, and good packers.

I'll see what happens when I
find that BC-610 I've always wanted! ;^}

I never commented on the price of the Seneca. I built one in the early 60s
and enjoyed using it. As I recall I used it with an Ameco nuvister
converter into an HQ-145. Nice radio, go for it.

> then the joint (mostly Navy) AN/ARC-1, ...

Just noticed the mental discontinuity there - should have said AN/APR-1. The ARC (non-AN) quickly mutated to the ARC-1 (non-AN) and then a planned ARC-2 (non-AN). Things were moving so fast for a while the Navy was trying to plan ahead. The ARC-2 (non-AN) was actually issued as the AN/APR-1. Thank goodness the AN nomenclature was instituted in 1942 - we could be trying to sort out ARC-3, 4, or 5's!

Hammarlund made a series of Super Pro receivers. The numbered series was based on the original SuperPro model, made for the military. The manual for mine simply reads on the cover:

Super Pro Radio Receiver
Manufactured by Hammarlund Mfg. Co

Published by authority of Chief Signal Officer.

Has anyone used a Hewlett-Packard SIgnal Generator Model HP-606-A ??
This is an R390 size unit covering 50kc to 65 Mc. The owner, a local
non-ham contacted me for documentation (right...lets see what I have in
my file :>) ...nope sorry, nothing related) to repair before he offers it
for sale (probably no more than $75). Can anyone recommend a fair price
(it does not work but looks complete) and does any one have documentation
that can be shared? The unit was surplused from a school and was
probably used in various stages of poor performance until it no one would
turn it on any longer. What is a rescue worth ?

That's easy, he has the *original carton*! The radio isn't worth
very much, but the cardboard box, ah that's something else.

Were you at the Dayton Hamvention in 1995 ??? If so, Please Read this!

At the Dayton Hamvention in 1995 four Rockland 7530B FFT Analyzers were sold - with sets of the appropriate manuals.

I just have a need to make a copy of those manuals, so if you were at Dayton in '95 you might know one of the four lucky people that went home with a Rockland unit with manuals. I'm trying to contact them, but unfortunately, the seller doesn't have any of their addresses.

Also, if anyone you know of has one of those Rockland 7530B FFT Analyzer's (It fits in a Tek Series 7000 Mainframe, into all three slots) could you have them contact me if they have the books ?

Thanks !

Date: 1997-12-14 00:00:00 UTC
From: cnord@snet.net
Message-ID: <3493e21d.3686734@news.snet.net>
Source record: 113284

Picked one of these up recently and of course got it home and it does
not work. I am pretty sure this scope was part of a electronics course
and the full manula is large. i would buy it but would be happy with
a schematic,parts list and maybe voltages. can anybody help here ?
Thanks and 73,
Carl

WELL IT AIN'T WORTH $500.00 LIKE YOU FIRST POSTED HA HA.
$50.00 IS MUCH MORE IN LINE WITH THE VALUE OF A SENECA.
GREED GREED IS ALL I CAN SAY.. GLAD TO SEE NO ONE
PURSHASED IT AT THE INFLATED PRICE OF $500.00

Source record: 113291

IN reading the " for sale " prices I usually laugh at
the listed prices of some of the gear.. Much of what is
being sold , is being sold by " dealers " who buy up
gear at hamfests and then sell at highly inflated prices.
Normally I don't comment on this subject but one I just
read begs for a comment .. some guy is selling (I use
the word selling I should say ripping off) a HeathKit
Seneca for a mere $500.00 .. Now the Seneca is has a
value of about $50.00.... unless you want to pay $500.00
for it .. and I guess thats what the seller is hoping for,
that is to find a sucker willing to pay such a joke of a
price...

I agree that $500 is probably too high, but the marketplace will determine its true value, not what either you or I think.

I have found that outrageous prices are typically from an ignorance of the marketplace, not out of any sinester desire to defraud the innocent. In this case, as in most, I choose to give the seller the benefit of the doubt rather than publically pass judgement on his motives.

Who knows, someday I may ask an outrageous price for something out of my own vast ignorance. I know if I do that I would certainly appreciate a private word of advice to a public lynching.

Oh, well, enough bandwidth on a lovely winter morning. My best to all....

I've never bought or sold anything on the web, but have been kind of watching eBay lately since I've got the bug for a old shortwave. My question/comment is "How do you keep from being screwed?" I can understand a seller not wanting to pack up and ship equipment till they are sure the bidder will pay, but how do I know the seller actually has the equipment and will send it. The stuff I'm looking at is $200-500 and that's a lot of money for me.

What I would rather see is a way to sort by location so I can deal with people withing travelling distance. That way I can see the equipment and make my own judgements about condition and acually get the equipment when I part with the money. Anyone have any tips to avoid being ripped off?

There is no %100 way of being sure. You can check the sellers feedback on eBay, I sure wouldn't shell out that kind of money to someone with little, no, or bad feedback. You can also ask the seller for a Home phone number so you can call them in person. If they're legit and selling a big bucks item they shouldn't object to this. Also most sellers have their location listed by state, thought the odds of finding something you want close enough to go look at it is pretty slim in my experience.
Hope this helps,

Eric.

I have a near mint (missing one key cap) model 19 Teletype. It is complete, and includes a few rolls of paper and punchtape. Plug it in, and it works flawlessly. It is located in an old farmhouse (former QTH) in Madison, WI. This house is scheduled to be burned. I have nowhere to keep it, and it seems a shame to destroy it. It is free to anyone who will pick it up.

C. Dean Norris wrote:

>My quuestion is, how are you making the proclamation that an item is
>being priced above FMV? Are you a certified appraiser of this
>merchandise or are you merely expressing your opinion?

I don't do it professionally (though I did when I repaired audio electronics for a living). I pay attention to the equipment I see for sale, its condition, how much is asked, how long it takes to sell, and at what price it finally sells. I know lots of people who collect and trade this kind of equipment, where they buy it, and how much they paid. So I suppose I'm "merely" expressing a well-informed opinion. Do "certified" appraisers do something else?

Some items aren't offered for sale very often, and their values are less precise. But items one could easily find 5 or more of in a week (which is the case with Bostonian's tape machines) have much more certain fair market values -- they are regularly traded for pretty standard prices.

When asking prices get over 3x the regular trading prices (and soar to 10x FMV as some of Bostonian's do) they deserve public comment in the interests of a free market. If there are 10 Ampros readily available for $15 each, and one prominently advertised for $150, a potential customer may think $150 is the going rate. Taking the initiative to type a page of hype and post it to a dozen newsgroups does not warrant a 9x FMV premium. So I point out that the machines are readily available for much less. Now, if the potential buyer would rather spend the $150 than look around a bit (and there's nothing wrong with that), s/he has made an informed decision in a free market. But without the information on FMV, s/he may have been taken advantage of by someone exploiting the lack of market information.

Looking for information on Sylvania West and the R-1414.

Apparently both the R-1414 and R-1451 were known as
"Sylvania HF Manual Receiver".

Have partial schematics, looking for more complete docs
so I can fix partially functioning ISB, audio and 1st IF modules.

Looking for schematic, assembly instructions, courses, etc
for the NIDA MiniLab 400.

This is a 70's era integrated O-scope, function/signal generator,
DMM, variable AC and 3xvariable DC supplies, also had a
"prototyping and test" area. Photos are on my web site.

> I know lots of people who collect and trade
>this kind of equipment, where they buy it, and how much they paid. So I
>suppose I'm "merely" expressing a well-informed opinion. Do "certified"
>appraisers do something else?

Well, yes... they establish replacement value for the purpose of insurance losses.

> But items one could easily find 5 or more of in a week (which is
>the case with Bostonian's tape machines) have much more certain fair market
>values -- they are regularly traded for pretty standard prices.

There is not now, or ever was such a thing as "fair market value" when applied to antiques/collectibles. The very idea is contradictory to the concept of a "free market". The seller has his/her asking price, and the buyers can do as they please. How much simpler does it get?

>Taking the initiative to type a page of hype and
>post it to a dozen newsgroups does not warrant a 9x FMV premium.

Why not? Really?

> But without the information on FMV, s/he may have been taken
>advantage of by someone exploiting the lack of market information.

Oh come on now! People are responsible for going out and finding recent asking/selling prices for collectibles all by their adult selves.

I don't know about Ampro prices, and frankly I don't care much either. But I have dealt with "Bostonian" and he seems a very decent person, not exploitational, or unfair, or deserving of any of the ad-hominem attacks I have seen in this e-mail thread.

And frankly, I'm tired of people posing as self-appointed consumer advocates taking cheap shots at him from behind the veil of anonymity.

I only have the following manuals left.....

ALL ARE ORIGINALS (no photocopys)

Kenwood TS-700S operating manual $ 8.00
Kantronics KPC-4 oper/tech 93pages $ 5.00
Henry 2002A/2006A/2004A oper/maint 23pages $ 5.00
Ten-Tec # 238 Ant tuner manual $ 4.00
Kenwood VFO-820 operating manual $ 4.00
Dentron Clipperton L operating manual $ 5.00

Will need extra $1.00 postage on any of the above.

Manuals are clean/complete, most are in mint condx.

Wanted: Kenwood TS-530S Operating Manual,
will pay $15. for a clean original.

E-Mail me n8lmt@usa.net

5200. Did the National SW-54 have a back cover?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-15 00:00:00 UTC
From: badger@telalink.net
Message-ID: <671ud6$nne@apple.telalink.net>
Source record: 113224
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Yea, silly question.

I have come across a National SW-54 receiver. Cute little low-end
BCB+SW radio. My example is almost as if it came out of the box
(except for all the paper caps replaced, but that is another story)
except for the back is open -- did this radio have a back cover?
Many of the receivers of the era seemed to have a fiber back of some sort
to keep curious fingers out. I have a repro manual, but it doesnt show
a pic of the back of the set.

If someone has an SW-54 with a back, can I talk you into photocopying
it for me so I might make a replica? Drop me an email if you would .
Don't respond here, as I have a sporatic newsfeed at best.

And dont flame me for wasting my time on such a cheap radio --
I'm going to recap an S-38 in a few weeks too. Gives me something
to do, keeps me out of the billiard halls, etc. :-)

Happy Holidays to all!

Tom KA4RKT
badger@telalink.net

5202. GE TMX8825 800MHz & MVP VHF/UHF special freq programming

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-15 00:00:00 UTC
From: webspace@no-spam.calweb.com
Message-ID: <3494c861.9347978@nntp.calweb.com>
Source record: 113226
Body handling: Binary attachment payload not displayed: 8825.txt, mvs.txt

Attached are two text files telling how to reprogram
TMX-8825 800MHZ G.E. radios to operate on any frequency the
VCO will go to (about 750 to 900 MHz). The same is said for
MVS radios (VHF and UHF). All the front-ends and PAs are
remarkably broadband, so other than this trick and an
adjustment tool on the VCO (if you pull it too far), you
won't need anything else. The VHF should pull to ham bands,
but don't know how much use the rest of this info will be.
These radios are going into dumpsters. Seems a shame for a
programmable radio.

Keep in mind this assumes you can get a copy of the
programming software. Trade something with a tech at a
two-way shop.

Just tossing out data before I wipe it from my hard drive.
So if you flame me (and I deserve it for posting to a group
I don't subscribe to), be sure to fix up the reply address
first. Sure this is the WRONG GROUP (wrong flavor of boat
anchor), but it looks pretty close.

[One or more binary attachments are retained only in the source text.]

I've had better luck buying equipment that works as good as claimed off the internet than I have at hamfests. Packing and shipping is the biggest worry/headache, especially if you're looking at tube-type equipment. I like C.O.D., but there is no assurance they won't send me a couple bricks in a box. If the deal appears to be "too good to be true" then it probably is.

5209. FS: NOSB National HRO-500

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-15 00:00:00 UTC
From: rmote@rain.org
Message-ID: <673ejf$287$2@news.rain.org>
Source record: 113233

The National HRO-500 was the first synthesized solid-state receiver made in the late Sixties. It used discrete transistors in sockets, and all point-to-point wiring. These are still in the long-term storage packing the military added when they got their hands on it (how to make a 42-pound radio weigh 88 pounds!), including the moisture/vaporproof barrier bag inside and wooden crate outside. I have two to sell, at $1,200 each (price is *firm*).

I've got my hands full fixing up the house we've lived in for 20 years (so we can sell and move), so desire serious buyers only. I'm selling them because I have the hots for a specific computerized telescope (also not cheap). Yes, I'm keeping one other for my own use <grin>.

Noted the current "flail" with someone else selling these. Price is what I had to give for 'em, and I'm not about to lower it. Topic not open to debate at this location; confine your comments to others on this group and elsewhere.

OLD ARRL HANDBOOKS AVAILABLE

Several Vintage ARRL Handbooks for sale.
All contain those transmitters and receivers
we cobbled-together as Novices, and those
before 1972 have the wonderful ads in the back!

Condition guide with web page addresses
to illustrations at the end of the list.
A .jpg or .gif file of any Handbook
will be emailed on request.

I will discuss counter-offers and trades.
Add $3 shipping per Handbook.
Multiple requests decided by lot.

1953-- green and gold. $10
poor cover, poor binding.

1954-- red and grey. $12
fair cover, poor binding.

1959-- grey and black. $25
good cover, good binding.

1960-- green and black. $20
good cover, fair binding.

1966-- blue and silver. $22
good cover, good binding.

1969-- (illustrated covers start here) $15
good cover, good binding

1970-- $7
good cover, poor binding.

1972-- $12
good cover, good binding.

1975-- $10
good cover, good binding.

1977-= $7
fair cover, good binding.

1981 (large format)-- Shipping costs only ($3).
fair cover, retaped binding, coffee-touched.

ARRL ANTENNA BOOK-- 1970 edition $6
good cover, good binding.

CONDITION GUIDE
General:
All these books are believed to be complete and are
"as described" to my best ability and the limits of this media.
In those books with Fair or Poor binding, I believe all pages
are present (except as noted), but I cannot check each and every page.
The contents of all the books are in good/serviceable condition.
I have included web addresses to condition illustrations.

As all Handbook collectors know, the cloth bindings tend to become
fragile or even loose over time. Individual pages and sections
can also become loose. Handbooks can be rebound at a modest price.
Check with your local librarian for a rebinding service.

Old Handbooks should always be treated with the same care and respect
you would give any vintage book. Always support the spine with one hand
when opening. Never place any object other then a sheet of paper
on or in your handbook to "hold you place."

Handbook covers and bindings are graded
NEW, EXCELLENT, GOOD, FAIR and POOR.
There are no "new" or "excellent" in this lot.

GOOD COVER:
Minor dings, chips or light dogearring. No large tears
or crumpled areas. Some use wear at spine and/or page edge.
Possible light stains. Light wear.
GOOD BINDING:
All sections secure. Covers firmly attached along more
then 90% of length. Some use wear along spine boundry.
Some use wrinkling. All sections secure.
Possible 2-3 loose pages.

http://pw1.netcom.com/~arc5/good.jpg

FAIR COVER:
More wear, wrinkling and dogearring possible.
Firmly attached to spine along more then 80% of total length.
FAIR BINDING:
Several loose pages or 1-2 loose sections.
Spine shows heavier wear and wrinkling.
This book should be rebound soon.

http://pw1.netcom.com/~arc5/fair.jpg

POOR COVER:
Heavy wear, dogearring and/or scuffing.
Major tears or sections missing.
Loose from binding over more then 80% of total length.
POOR BINDING:

Large number of sections are loose from spine.
Torn, sections missing etc.
This book should be rebound before use.
NOTE: Some otherwise good handbooks are
rated "poor" just because the rear cover is 30% loose.
Ask if in doubt.

http://pw1.netcom.com/~arc5/poor.jpg

Source record: 113242

I love my Hammarlund HQ-180AC and HQ-160, but
their audio quality leaves a bit to be desired. I have
read about a few other receivers that have push-pull
audio (for instance, Hallicrafters SX-42 or National
NC-183). Does that result in noticeably better
audio quality? Or is the difference not great enough to
bother?

Thanks

Phil Nelson

Actually a ventilated steel back, same colour as the rest of the
radio. I just sold one about a year ago. Although I suppose it
may be possible that they produced them both ways. But mine was
definitely original, and steel.

And by the way, I would never even think of saying anything bad --
I have the guts of two S-38s spread out on my workbench as I type
this... :^)

For Shortwave and BCB listening, I LOVE my old Philcos.
Most of the early models used 42 wired as a triode, driving
a pair of triode configured 42s in push-pull class A!

I had a NC-183, and it had darn nice audio as well. Ditto for
the SX-42 and SX-28 receivers -- if you don't mind using 500
ohm speakers.

There may be those tired of hearing my rant, but without question the best "sounding" rx I have is a Hammarlund SP210. Push-pull 6F6's coupled with a continuously variable bandwidth. If you get a nice strong signal from Auntie Beeb or Deutsche Welle, kick back, it's FM time! I hung a fairly good bookshelf speaker on it thru a Radio Shack 70v coupling transformer. There are some pictures of SP's of this vintage sitting on top of cabinets with obviously large speakers in them. The HQ180 and 51J3 sound constricted by comparison....

A. B. Bonds
PS Nice to see a Boatanchor topic in the Boatanchor NG instead of marketing....

5226. Halli Transworld dial cord help

Newsgroup: rec.radio.amateur.boatanchors

Source record: 113252

What sounds best is very subjective and it depends what you're listening to. However, I agree with Mr. Bonds. The Super Pro 200 and 400 series are hard to beat, for broadcast listening especially. They combine a good audio section with continuously variable bandwidth control, with 16 kHz as a max. Not too many other receivers in the communications arena have both of these features. I have a 200 Series. It requires a 500 Ohm electrodynamic speaker. These are generally older speakers and don't have the frequency response of modern day speakers. The speakers ends up being the weakest link in the chain. (70 volt line transformer option discussed below is a way to get around this) I think the 400 Series will work with 8 Ohm speakers.

Of course in the broadcast set arena there were many receivers with push-pull audio outputs. The console types generally have the best sound because they have big speakers (12" or better) and the cabinet act as an infinite baffle. Some of the high end sets also had multiple bandwidths, some as wide as 20 kHz. Unfortunately, unless you live in a rural area, the AM band is too crowded these days to use that kind of bandwidth.

Of course there is always the external audio route. Some receivers, like the R-390A have a terminal strip on the back that includes the output of the diode detector. This can be connected directly to an external hi-fi amp for excellent audio. The R-390 also has several wider bandwidths. (You can do this with any receiver. Some require you to get inside and tap the detector output.) However, you may not want to mess with this extra step.

The ultimate test is your ears. If you can, listen to the receiver before you buy. I'm sure you'll find one that sounds better than your HQ-180 (a fine receiver but not designed for anything near hi-fi audio).

Well, 8tt is correct in that $500 for a Heathkit Seneca is an outrageous price. Either the seller is very ill-informed of what one should be worth, or he is just hoping that some other more ill-informed individual will be stupid enough to pay it.

By the way, buy a dictionary and learn how to use it before you post again.

I have for sale a Zenith TransOceanic Super DeLuxe Radio. This is the A600 series tube type 7 Bands. Just got back from the RadioMan. Checked and retubed. All OK. There are three small wear spots on the nagohide material on the top, easily restorable. The front is perfect. All controls are operational. Antenna is fine. Comes complete with original
operating guide and Instruction guide with map and times locator. The WaveMagnet still has the rubber suction cups on it. This is one of the most collectable radios ever made. I'm open to offers or trades of ham equipment. 73 Chris VE3NGW/W4 FtLauderdale Florida

This is a project radio, and not one that should be plugged in without going through and changing caps and so forth. Cabinet has been partially repainted, few very small holes in cabinet from where someone added and then removed a vernier dial. Knobs are non-original.

Receiver covers .55 to 30 Mc., with bfo, multi-position crystal filter with phasing control, calibrated bandspread, ANL, and rf gain control.
$25 plus shipping from Nashua, NH 03060

I have, in excellent condition, a General Electric Transmitting Type Tube Manual.
It's from 1955, all (slick) pages and tabs are there, and it's a beauty. It's (today's) QST size, about 2 inches thick, and hard covered. It probably weighs about 10 pounds, and it's loaded with data and photos.

I'm not a dealer, and have no idea if it's worth anything, but I'd think it would be good reading- I enjoyed it.

So, make me an offer, money or trinkets.

Hi Jeff,

Although i wasn't a radioman, I am familiar with the Angry 109
system from use in '77 Special Forces. I belive it dates from WWII,
as a suitcase radio.The commo guys liked it, as it could reliably
make intercontinental comms.If you lost your antenna, it would
tune up a dogtag chain.On the down side, the transmitter portion
is crystal controlled to the freq you can find a crystal for.
It is a beast to backpack around, usually with 6+ guys carrying
a portion.I usually got stuck carrying the generator, which sits
on a tripod seat,and used 2 hands to crank,for xmt power.
They were replaced by the PRC-74, then the PRC-70,
SATCOM, and spread spectrum rigs.
There is an excellent article on them in the mil commo site at

http://telalink.net/~badger/millist/mi.html

Hope this helps. De opresso Liber Larry

5240. Boatanchor speaker questions (replacements where and what)

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-16 00:00:00 UTC
From: Ed Soniat <ed@texas.gtri.gatech.edu>
Message-ID: <ghora7do6ay.fsf@texas.gtri.gatech.edu>
Source record: 113171

Greetings:

I need a speaker (and maybe some phones) for a Hallicrafter SX110.
It specs. 3.2 or 500 ohms. Is a 4 ohm speaker close enough.
Where would one get a 3.2 or 500 ohm driver or entire speaker box?
I don't want an original speaker I want a new one. Phones could
be used.

Thanks for your assistance.

Ed

>Where would one get a 3.2 or 500 ohm driver or entire speaker box?
>I don't want an original speaker I want a new one. Phones could
>be used.

Purists would suggest that the speaker should be matched to the output of your radio. 3.2 into 3.2 or 500 into 500 ohms. However in real world applications, a mistmatch upward (output to load) of between 50 and 100% is often acceptble. In most cases an 8 ohm speaker can be connected to a 4 ohm output with only a minor reduction in level that may not be noticed. Meaning that a 4 ohm speaker on a 3.2 spec is not likely to precipitate either electrical failure, or audio quality problems. The 500 ohm output can be matched to virtually any speaker you choose through the use of a readily available matching transformer.

Now all you have to do is decide is the type of speaker you'd like to use. I use a 15" Electrovoice with sectoral horn tweeter with both my Hammarlund Super Pro and my Hallicrafter SX-42. The way God intended radio listening to be.

HP 606's (A or B) go for about $100-$150 here in the D.C. area, but
are in working condition. They are a bit difficult to work on as the RF
section is in a sub-enclosure, etc. The meters bring about $30 a piece
here. They seem to go out with regularity. Iuse mi\y 606B regularly.
They're a lot better than the URM-25( ). If someone needs the book, I
guess I could dupe it for the cost of paper, postage and a "large"
SASE. de K3HVG (good in ANY book/list.)

Source record: 113196
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Would like to trade my BC-375 for something of equivalent value or will sell for cash if necessary. The item is as follows

1. BC-375 unit, NEW condition with original box (box a bit beat up) and one new tuning unit that comes with the radio. I have 4 VT4C tested tubes that I bought for the unit (at hi fi prices ugh) and I have about a half dozen various tuning units for all bands although the units are in good mechanical and electrical condition, the paint on the dust cases is grungy and the front panels are suffering crackel paint separation. The only blem on the basic radio is the top cover's paint has flaked off in a big patch and I plan to repaint that item, the paint on the radio itself in in nice condition. There is no corrosion or dings or dents etc. I have had this unit in dry storage for nearly 20 years now and will never get it on the air. So if interested drop me a line with your thoughts. I would prefer a pick up in Sacramento, but I will ship UPS if new owner will pick up the versapacking fees as well as the UPS ground shipping. I estimate the versapacking to come to around 75 dollars including the main unit and all the tuning units shipped one to a box. I learned my lesson on putting more than one item in a box, even with versapacking.

Thanks for the read.

Biggest problem was broken end stops on the PW dial drum.
By the time they built the HRO-500, they made the PW dial kinda
cheesy! Worst problem in the receiver (besides it being a 'rat's nest')
is the phase lock loop circuit that controls the band segments.
It gets unstable and the loop locks somewhere else besides where the
calibrations on the drum are! It's a ROYAL PAIN to get aligned
really properly! Very tedious and touchy!
The receiver is great when it's working OK, but is a super pain in the
ass to work on!
73,

The R388 is regarded as a better-sounding rig for AM, though I haven't gotten around to recapping and aligning my own to see how good it can get personally. Do remember that communications rcvrs have narrow bandpass for selectivity, even at the widest settings, and will never be hi-fi. You can "push-pull" that narrow frequency response all you want, to little avail. Try an external graphic EQ to boost the highs above 3-4kz, and the very bottom, to get the best it may deliver.

Frank

Hello all.

I am looking for the following T-368 parts for a "F" model that I am restoring. If you have these or any other 368 stuff I would be interested. Hopefully someone has some of these goodies laying around.

-Exciter, complete or parts unit.
-Meters, esp. the Excitation and Fil Voltage units
-Pilot Lights, and or lens
-Circut Breakers frm Front Panel
-2 Deck Handles
-Mic Plug and Socket
-Connector for rear Panel control jack

If you have any, all or other T-368 stuff I would be very interested in hearing from you, will even pick-up a complete unit within 400 miles of Buffalo, NY. Of course for small stuff I will pay shipping on.

Please contact me via telephone at 716/625-800 days, 716/689-6727 evenings, or email to kg2ic@amsat.org.

Thank you!

>Hi AlanIf it is in mint condition, that is both microphone and stand, I'd be
willing to pay the man what he paid for it 25 or so years ago. Or for
that matter, what you feel its worth to you now. I have a D-104 which I
use with (what I call) my brand new SB-102. It too is in perfect mint
condition. Its a great microphone and every time I look at it it brings
back the golden days of yesteryear. In fact, I have somewhere a copy of
QST Nov 1936 in which there is an ad with a real nice picture of the
D-104. It's hard to come by chroming like that anymore (No, I didnt buy
the QST nor belong to ARRL at that time. The issue was given to me by an
old timer who has now become a silent key) Let your concience be your
guide Alan and enjoy it when you use it

I am in the process of cleaning up a 51S-1 that is quite dirty. It's been 20 years since I've worked on one of these.

Now that I have the front panel off for cleaning and am cleaning up the dial mechanism area and chassis...

What is recommended about lubrication on the gears, chains, etc.???

They are quite noisy/"clattery" as I remember them always being but look in good shape and look very dry. Should any lubricant be put on gears and chains? If so what??

*** Remove XXX if you reply by e-mail which is best way to assure that I get your suggestions...***

THANKS!

Original posting follows.

Dick makes a good case for the original post.

Ignorance is about the only explination for market prices that do not
reflect informed value (is this redundant, or circular).
A post exposing the bad pricing is an excelent way for newbie to learn
the good price. It is an excelent use of bandwidth. I appreciate each
and every message. I also appreciate the opportunity to judge each
posting on its merit using my perceptions and the comments of others
to draw my own conclusion. People should post freely and ignore
persons who would inhibit them. As to the "swap shop" nature of these
groups, aquiring equipment is fundamental to learning about it, and
learning pricing is fundamental to aquiring it.

Message-ID: <678i71$i23$1@newsd-162.iap.bryant.webtv.net>
Source record: 113125

Yes, I think you will notice better AGC action and increased sensitivity. Nothing radical because Hammarlund made some evolutionary changes to each model.

I had a number of RX's and I like the HQ140 best. Some will say Hallicrafters sound better or the HQ-180C is the most selective.. but this is highly subjective and often depends on the condition of the tubes and condensors more than anything else and what type speaker they are using.

I like Hammarlund - they made good equipment that will almost last forever if proper care is given. Most parts are easy to find. Circuits are easy to understand and fix. Performance is really good.

I wish my automobile was just as reliable...!

You might want to consider using both the 120 and 140 with different antennas tuned to the same station to get diversity reception. It really changes when you get above the 20 meter band.

I think you will enjoy the 140 once you got it restored... drop me a line and let me know how it turned out.

Merry Xmas,

bis_wichy@webtv.net

From: Rick Hiller <rhiller@sysdev.com>
Message-ID: <3497D42D.47F6@sysdev.com>
Source record: 113128

Folks,

I've got an RCA Type BK-1A MI 11007 microphone for sale for $65
including shipping.

This one is a bit rough and I will try to describe it's condition the
best I can. Top concentric rings over the element--one section (1/3) of
the outermost ring is missing. All others intact. Body is well used
but not abused. RCA gold logo still very readable. Base chrome swivel
portion works but the portion that has the threads for screwing onto a
stand is scratched all the way around from the it's middle to the stand
thread end.

Overall can be recovered with some diligence of repair etc. Was used
for years to drive a Kenwood 830 Ham Transceiver.

Email me with your inquiries to nexus15@flash.net or
rhiller@sysdev.com.....Thanks...Rick in Houston

I've run into cases of low-lifes buying a tube from me,
writing and saying it's defective, and returning a
different, bad tube in it's place for a refund.
I'm sure some of you have as well.
I've started something I think very practical for
stopping these snakes cold.

Every tube's getter pattern is unique. It's like
a "fingerprint" for an individual tube.
I've started getter-patterning all my most valuable
tubes before shipping. It's easy and requires only
a millimeter ruler and a camera.

More details if there is interest.

Anyone know what happened to the BASWAPLIST reflector. Seems like either it has gone down or I have dropped off the relfector's address list. I am not referring to the "BA @ The Porch" reflector, but the one administered by the e-mail address "majordomo".

Regards,
Dave, K2DP, St.Louis

Beware Ron Merrell W0OIZ, this individual is attempting to resell equipment that he sold to me, received payment for as confirmed by my bank, and shipped to me last week by his own word. The equipment involved is an Icom 730 package, advertised yesterday by Merrell but bought and paid for by me last week. Please protect your interests and refrain from any dealings with Ron Merrell, W0OIZ.

73,

Jeff KG6UC

I use an SX-43 to drive a large, 2 way stereo speaker (salvaged from a
yard sale, one of those no-name Audiovox types). The rig has enough wind
to fill the second floor of the house without distorting. This speaker
makes listening a real pleasure...no tinny squeeks from some 5 incher.

5303. Wanted: Info on RCA T8-14 swl set

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-17 00:00:00 UTC
From: russm@netman.ens.tek.com
Message-ID: <6790bk$elk@netman.ens.tek.com>
Source record: 113134

Restoring an RCA T8-14, a BCB, 1.6-6, 6-18 mHz table radio. Six Radiotrons, a rectifier and one other tube. Has an electromagnet speaker that operates off of a 350 V half wave bridge. Circular dial, with on/off, band, volume, tuning and tone (?) knobs in a wooden case.

Would like a schematic and have to replace the power "electroleaky" capacitor which only has the the number 35 on it. (mf?) Lights up but has the expected hum from the power supply.

What year is this baby?

Any help would be appreciated.

TNX, 73

Electronic timer assemblies and components.
All items located 10 mi NW of Philadelphia, PA.

DYNAMIC TECHNOLOGIES INC. P/N 88052002 timer assembly

Printed circuit, single board. Digitally counts power
line frequency to generate four precision timed intervals
of 15 sec., 30 sec., 1 min., and 2 min.; also manual
start/stop. Accuracy: +/- 1 cycle of line frequency.

Control; manual input via membrane switch (or equivalent).
User selects one of 6 options on keyboard (DTI P/N
88052003) start 15 sec, start 30 sec, start 1 min, start
2 min, start continuous or stop. On-board piezo loud-
speaker beeps for each keyboard entry. Last command
entered cancels previous command or command in progress.

Power input: 120/240 V 50/60 Hz. Frequency and voltage
selected by jumpers on mating connector (A/MP P/N 1-480287;
requires up to 10 ea. A-MP P/N 60617-1 pin). Connector is
available from A-MP or their distributors. Grounding is
required for best noise immunity.

Output: Normally Open (NO) relay closes during timed
period. One terminal of relay is connected to one AC line
terminal (pin) on the connector; other relay contact to
independent pin on connector. Relay contacts rated 30A
resistive: printed circuit designed for 5A load. External
varistors required for inductive loads; can be mounted on
mating connector.

Timer overcurrent protection; 2 ea fuses, 2AG, 1/8 ampere
fast blow, (Littelfuse P/N 225.125 typical) in clips on PC
board. 1 set of fuses is installed on board.

Size: PC is 4-1/2" X 6" X 1-5/8" overall. Mounting
centers 4" X 5-1/2". Designed to mount with four nylon
snap mounts, RICHCO P/N DLCBS-4-01 typical. 1800 available;
104 timers per carton; shipping weight: approximately 60 lb/ctn.
4000+ matching membrane switches included in lot.

$2000/lot
****
2AG-1/8A fast blow fuses, Littelfuse P/N 225.125.
5800 available in original packing. $250/lot

NYLON snap-in printed circuit mounts; RICHCO P/N
DLCBS-4-01, Snaps into .156" hole at each end;
1/4" spacer between. In bags of 1000. 25 bags available.
$100/lot

Circuit breaker, Potter-Brumfield P/N W28X1A-5, 5 Ampere;
in original factory cartons (600/ctn). 4500 available
(7-1/2 cartons). $2000/lot

RELAY, 12VDC, SPSTNO, 30 Ampere; Printed circuit mount,
Potter-Brumfield P/N T90N1D1-12; in original factory
packing. 250 available. $150/lot

Hi, all
I too have to concur with Bob and defend Ron who is a GOOD GUY.
Wish people would think twice with some patience B4 openning up darn
mouth. I wonder how Jeff is going to repair the damage he caused.
He better come out and apologize to him LOUD on the news group.
I have dealt with many different hams on the 'net involving some times
thousands of dollars but never got cheated or burnt. Aalso I never cheat
or burn anyone. SEASON'S GREETINGS TO ALL, HAPPY AND SAFE HOLIDAYS.
Tony, VE6CGX
P.S. My guess is that, Ron did not delete the FS post after selling the
radio to Jeff.

5319. How good were the Gonset sidewinders?

Maybe that 600 has gold knobs too, hi.
What's special about 500? As a first generation PLL, Synth. radio,
it was a nightmare with PLL going unlocked. Of course anything can
be maintained to work OK but at what cost and pain? I'd rahter have
HRO-60 than 500. No thank you.
Tony, VE6CGX

> A post exposing the bad pricing is an excelent way for newbie to learn
> the good price. It is an excelent use of bandwidth.

Yes and no. The guy who "exposed" the bad price proceeded to offer up a "good" price, which smelled equally strongly of fresh rhinoceros dung.

I admit to a somewhat biting comment to the original Price Monitor report. The Price Monitor (correctly, actually) commented that $500 is probably too much for a Seneca.

Left there, even I would have ignored both posts and gone on. But the Price Monitor then stated without qualification that the same Seneca was worth $50. Now this guy supposedly understands the current market demand/pricing of BA's -- if not, he had no business making the original Price Monitor's report. But this same report now makes an even more serious error in the statement of value of the BA.

You just can't have it both ways. If you know what you're talking about, make the statement. If you don't (and that particular Price Monitor clearly did not) then shake your head and hit delete, or have the common courtesy to communicate in PRIVATE with the original poster. Surely we can all find more productive ways of feeding our egos than appearing as performers in Stupid Pet Tricks.

Frankly, all of this about who's monitoring who is a total waste of time and bandwidth -- as is this comment of mine on the same tired subject.

I had the 6M version for awhile. It looked neat (you know what I mean - early 60's Star Trek... god bless those wacky California engineers!) but worked OK. Final tuning was a bit finicky (with a 3 ele beam - 1:1 Swr) and you could accidentally -(easily)- ;^) go down below 50 and have fun with your next door neighbors wireless phones. Funny how AM can sound like FM on a cheap phone...

Mine must have been an early model because it did not have a squelch. (Hated that!)

Best I could say is, it worked as good as a early 60's transistorized RX and 3 Tube TX could... somewhere between a Clegg and Benton Harbor Sixer lunchbox...

When the band was in, I made many contacts who said audio ssb quality was "good".. whatever that means...

Phil,

My vote goes to the SX-28 Super Skyrider. Push-pull audio with a bass boost circuit, yet! A 500 ohm speaker or proper matching transformer is needed for best results, but it is worth the effort.

First runner-up goes to the SP-600 Super Pro. I've never owned an earlier Super-Pro, but they are well-regarded by AM operators.

Good Luck & 73,

Tony Schroeder, N8SNC

Those receivers have a 50 KHz IF that will limit high frequency response
If what you are looking for is "loud output" then the P - P output
will help....but...if you want fidelity...then..a wider passband is what
you
want. Receivers that have at least an 8 KHz passband for AM is what you
want. Also, many receivers limit the frequency response in the audio
stages, cutting lows and limitings the highs..."good communications"
quality...YUK!!!...The only "stock radios" that sound reasonable are
things like early Hammarlund Super Pro's SP-200...ect..Hallicrafters
SX-62, SX-28, The R-390 with an external amp (receiver in the 8 or
16 KHZ position). Many other radios CAN be made to sound as good
or even better than the previous examples but with modification.
73,
Chuck...K1KW

It looks like a KWM-380 but don't bother you will not be able to
buy one. Only 10 were manufactured and not all survived.
It should bring whatever an eager buyer wants to pay.

Eric, It looks like you were sucessful in hacking the freq.
files for these rigs. Here is a trick that I learned a while back and
it has worked on all GE Programming that runs on a pc. Type in your out
of band freq and instead of hitting the enter key press and hold "CTRL"
and then press "E" The CTRL E trick has worked for me on the DELTA and
MDS software. Let me know if you have any luck.

From: Joe_S <bigjoe@fnet.friendlynet.com>
Message-ID: <3499ca0c.0@news3.kcdata.com>
Source record: 113028

Thank you for taking the time to read this.

On my Hallicrafters SX-110 receiver there is a band selector switch labeled 1,2,3,4. On the tuning dial there are five bands...80m, 40m, 20m,15m, & 10m. Which number on the band selector coincides with what band on the dial?

What does the "AVC" on the sensitivity knob do?

What does crystal phasing do?

I don't have a manual for this radio....yet. While I'm waiting for one I thought I'd ask some questions.

Thanks in advance for any help.
Happy Holidays.

Well, I doubt you have a bypass capacitor problem - This model HQ was made sometime between 1963 and 1972.

Ceramic and disk capacitors made during this period are very reliable. It is very unlikely one would open up and then "fix itself" 30 minutes later.

If it was a tube problem - the signal levels would drop and stay down.

More than likely, it is a problem that I have seen in a number of heavily used Hammarlunds - dirty band switch wafers - This morning, I had the same problem happen on my favorite HQ... - BUT- it does it on the AM BC band... I rock the band switch and it clears it up. 30 minutes later, signal levels are down again. This weekend, I'll take it apart and clean it and make sure I have good contacts.

So try rocking the bandswitch and see if it fixes it...

If it was shipped by UPS ground from KS to CA, it would take AT LEAST 6-7 days, not counting the fact that this is the biggest shipping season of the year. UPS DOES NOT GUARANTEE a time frame on items shipped ground, anytime. UPS is telling our company to expect 10-13 business days on a similar ground shipment (weekends don't count) with the holiday season. So even if it was shipped on Monday of last week, that's only 7 business days.
I also would agree that the post either didn't get deleted, or as sometimes happens, it got reposted by the server.

Either way, patience is the keyword this time of year.

I echo Glenn's observation about UPS delivery running slow this time of year. I went to ship some things from the local UPS terminal last week and they were just as jammed up with Christmas packages as the post office. So naturally a shipment will take a few extra days. Big deal.

I've had several dealings and phone visits with Ron. And I hope soon to drive up for a visit in person. I met Ron in an internet radio deal and we have become friends. All the guys who refer to him as a gentleman and a man of his word echo my sentiments exactly. Ron does not do bad deals. In addition, he would go to any length to correct anything that went wrong in a deal.

I certainly hope that Ron continues to post items for sale on here. He honestly represents the equipment and his prices are more than fair. Save the flames for the bad guys.

I think the result of this thread is that people will look for opportunities to deal with Ron and will beware of the guy accusing him of dishonesty. I'll deal with Ron again soon if at all possible.

5396. HQ180A refurb

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-18 00:00:00 UTC
From: steve sheppard <sns@indcomp.com>
Message-ID: <882459238.1159266321@dejanews.com>
Source record: 113101

I'm a happy HQ-180A user and would *not* want to part with it. I had one as a teen (too many years ago now) and thought I'd never see one again but found one at an Atlanta ARC HAMfest flea market a few years ago. It was a little rough at purchase (owned by at least one smoker in its lifetime), but after a general cleaning and tweaking it bloomed again. Since purchase I've had only one shorted (original equipment) rectifier diode which I promptly replaced -- no other problems.

Sadly, it has lately developed some problems (no, not dead dial lights, I can fix that ;-). Specifically, after turn on and warm up (about 30-minutes) I started noticing the 15.35 - 30mHz band segment is quite silent -- significantly, even the crystal marker freqs -- but gradually comes back to life in another hour or so. Given the age of the unit and the fact that virtually all components are original equipment, my first guess would be one or more leaky bypass caps somewhere following the 1st RF / 1st mixer sections. Sigh, I could replace *all* the caps, but what a pain. Could also be a soft tube, too, but then I need to buy spares to do a tube swap here and there to prove/disprove that. Power supply seems up to snuff -- all voltages within about 5% of those speced on the schematic. Nothing obviously burned or baked.

Any other thoughts ? Suggestions ?

Else, it's off to the tube store for spares, then hit Mouser or DigiKey for caps...

I did a bit of trolling on the WEB but haven't found much -- a lot of people like the HQ-180A, many want to buy one, a few want to sell one, but no-one seems to have problems.

Thanks for any help you can render !
I'll compile any useful replies and repost soon.

This is a real decent looking amp,(could paint it and it would be new looking.) Has 4 Brand New 24LQ6's in it. Was converted from 6LQ6 because of easy and cheap availability of the 24 volt tubes. Also has new relay in it and in now functioning perfectly. For $300 shipped it would be hard to beat! I had 7 other tubes with it but all were soft!....New ones from Antique Radio for $12.50 each and plenty avialable from several sources. 73 and where do you want it shipped. If you arent satisfied with it, I will take it back or trade you UP!! Murray

5400. Ancient Multiphase C.E. Junk for Parts

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-18 00:00:00 UTC
From: luecknik@world-net.net
Message-ID: <34996ae2.6340470@news.world-net.net>
Source record: 113105

Don't know if anyone still messes with this old stuff. Pretty ratty. Been stored in a leaky woodshed for 30 years. Maybe someone needs some parts .
C.E. 10B. No tubes, but it looks like everything else, including the knobs and about 8 plug-in coils are there. Front panel has had some paint dribbled on it. Some rust, but no dents or extra holes. Even has the old manual.
MM-2 Frequency Analyizer. Panel looks like it would clean up good. Some rust seeping through the gray wrinkle case. No dents or holes. I believe it was working when I stuck it in the shed, but now the on/off is frozen, and not worth messing with. Probably a partial manual with this.
C.E. 458 . Front panel would clean up nice. Lifting the top lid, it looks like probably an 807 in there, with an empty socket beside it. All these would require extensive cleaning, and about 2 cans of grey wrinkle paint..
Willing to trade this useless junk for just about any useless junk you may have. Any old rx., tx,. ant.tuner, vfo, keyer, power supply, or failing that, perhaps a good story. But these are heavy, and no warranty!. So just the specific needed parts would be cheaper.
Thanks. James W5LWU

5401. Collins 270G-1 Speaker for sale

Collins 270G-1 speaker enclosure for sale. I think this is
the model that goes with the 75A-1. The actual speaker is NOT
a Collins speaker, it is some type of replacement speaker.

The enclosure has some paint rubs on it and the chrome
trim is scratched.

Price is $85 plus UPS.

Source record: 113107

It was my understanding that Central Electronics did not make a VFO.
The "458" is a Command Set, with a new panel and probably some
modifications to make it more suitable as a VFO. I wasn't around back
then, so I'm not sure if CE sold a conversion kit, or someone else
did, or the ham was supposed to do it by himself.

There must be two or three good quality variable capacitors in that
Command Set, and with some cleaning and lubrication they probably are
still useable, and still valuable to those who need them. Two of them
have a very good gear drive built in. They might have been modified,
however, for a narrower tuning range, by removing plates. There is
also a nice ceramic coil form for vfo builders.

About $25-$30...that's what sells at hamfests. Anything higher remains there at the end of the day. The D-104 is such a beautiful and well performing microphone, why on earth would you want to sell it? I think if I ever NEEDED to let go of mine I would give it to some newly licensed Ham and let him/her enjoy it for another generation. 73 KA9YZB

I now have two AF-67's, and three PMR-6A's.

I need a decent AF-68 with power supply.

Will trade an AF-67 and two PMR-6A's for one AF-68 with supply (original supply preferred, decent homebrew supply acceptable).

The AF-67 and first PMR-6a are in decent condition (these are mobile rigs, so they do have some scuffing wear). The previous owner says he had been using them and they worked fine.

The second PMR-6a is a parts radio that is untested, may work fine, but it has been modified.

5409. Need Drake 4 series Tuning Knob

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-18 00:00:00 UTC
From: Bryant McAllister <mb_mcalllister@juno.com>
Message-ID: <01bd0bf6$cbacc600$a65d56d1@nimitz>
Source record: 113114
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Seasons greetings all,

I am looking for a tuning know for the Drake 4 Series. Specifically the T4XC. While a correct, mint one would be nice, I really need one to tune the radio. I have checked with Drake and they no longer have 4 series tuning knobs.

Any help would be appreciated,

Bryant

5410. Needed for Meissner 150B

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-18 00:00:00 UTC
From: jonweiner@aol.com
Message-ID: <19971218210501.QAA15563@ladder02.news.aol.com>
Source record: 113115

I am restoring a Meissner 150B transmitter, and need a few parts. I am missing C-211, C-212, and C-213, antenna padding condensers. These are 2500V mica caps in the following valuse: .0003, .0006, and .0012, manufactured by Sangamo. Nothing real unusual, except these have banana plugs attached to plug into the transmitter. I could also use coils L202 and L203 (both plug in coils). I would also love to find (fat chance!) the matching military version of the Signal Shifter, model 02433. Anyone having any of these items for sale, please contact me. Thanks.

Jon, K1VVC (Greenville, SC)

Nothing. Absolutely nothing. IMHO, top price for one of these is $400 - 500,
and that's only if it's in good working condition, with manual, and a series
88 or 104. I like mine, but as someone said, it is a pain to work on and I
haven't had grief like some folks have (yet).

LABGEAR Power Amp.

I'm looking for information regarding a Military, UK made, Power amplifier marked:
LABGEAR Cambridge Eng. LSM100 P.
The amp. is housed in a Alu. sealed container with cooling ribs on the outside 23 x 23 cm in front and 50 cm diep . It is a hybrid construction 3 parallel QZ 06-20 tubes in the amplifier and 2 power transistors mounted on the outside front acting as Flip-Flop in the power supply, I think late 1950's early 1960's
What I can see from the construction it has 4 preset channels. The channels are selected by a rotary relay.
What I would like to know is: what installation is it a part of, what is the frequency band and of course schematics would be very nice.

DeOxit it is HIGHLY recommended. I have used on several HQs with DEAD bands.
Get some of those fine tipped cotton swabs (GC makes) and DeOxit (from
Antique Radio Supply) and clean away. 99% chance that is the problem!!

>Any other thoughts ? Suggestions ?

I would vote for a soft tube or dirty bandswitch contacts. I had a similar
problem with mine that I traced to the switch deck.

5436. HQ-180 Audio Quality Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-19 00:00:00 UTC
From: cliffkot@interaccess.com
Message-ID: <cliffkot.238.007C5A9D@interaccess.com>
Source record: 113054

I've noticed that my HQ-180 seems to peak received AM signals in two places. Apparently it has a double hump in the I.F. stage which is evidence of overcoupling. I wonder if anyone else has noticed a similar effect?

Cliff

Hi gang,

Looking for Drake B-line twins with AC4/MS4 in working condition.
Also looking for Heath SB-303. Prefer Cleveland, Ohio area for pickup.
Wouldn't want to risk shipping these classics.

hope your holidays are good.

Source record: 113064

Cliff,

My HQ180A does the same thing on AM signals...this, after
a careful alignment in the WB9GKZ laboratory. I really cannot
comment on why it does this...but your "overcoupling" idea
sounds right.
Your message header states "audio quality". I admit that the
audio quality on my 180A on both AMand SSB is not sparkling.
I thought of investigating this further with sinewave modulated
signals injected into the IF, then trace distortion with a scope
through the IF and the detector...but I have too many radios
and not enough time. Sometimes, I just settle on these radio
sets being true in character to their vintage...and leave them
alone.

Pat Keogh, WB9GKZ
Green Bay, Wisconsin

A misaligned IF stage can cause the same problem. You might
have two IF transformers peaked on slightly different frequencies.

I have the following items for sale. Prefer pickup for those in DC, MD, VA area...

WATKINS JOHNSON 8718A:

BEAUTIFUL LARGE LED'S, SILKY SMOOTH SILVER LEAD WEIGHTED TUNING KNOB, BLACK FRONT. ONE OF TWO ACQUIRED FROM USG SURPLUS OVERSEAS, THE 8718A IS THE DIRECT FORERUNNER OF THE HF-1000. USED IN INTEL/SURVEILLANCE AND MONITORING FACILITIES, THE 8718A HAS EXPENSIVE BFO AND TEST OPTIONS ALREADY INSTALLED. 120/220 OPERATION. FRONT PANEL OPTIONS SELECTABLE BY SOLID RECTANGULAR PUSHBUTTON CONTROLS INCLUDE READOUT TO 10 HZ (FIVE SWITCHES INCLUDING ONE THAT DISABLES TUNING KNOB), FOUR POSITION BFO OFFSET, AM, FM, CW, ISB, LSB, USB, FIVE SELECTIVITY POSITIONS FROM .3, 1.0, 3.2, 6, 16 KHZ, RF GAIN, AF GAIN, AGC FAST/ SLOW/MANUAL, SEPARATE LSB/USB BUTTONS FOR ISB MODE, WONDERFUL WHITE ANALOG S- METER ON FAR LEFT WITH LINE AND SIGNAL STRENGTH OPTIONS, AND FRONT PANEL HEADPHONE JACK. BACK PANEL CONTROLS TOO MANY TO MENTION (INCLUDE IF OUT, FM AUDIO OUT, ISB AUDIO OUT, BNC ANT, SPARE FUSE HOLDER). INSIDE ARE EASILY REMOVABLE CARDS (SIMILAR TO JRC CONSTRUCTION). THIS IS FOR THE SERIOUS COLLECTOR ONLY. DON'T EXPECT ALL THE OPTIONS OF A JRC 535 -- BUT ONCE YOU TUNE ON A WJ YOU'LL BE HOOKED. RACK MOUNT WITH BEAUTIFUL SILVER ALUMINUM HANDLES, BLACK PANEL FACE, HEAVY ALUMINUM CONSTRUCTION, TOP AND BOTTOM PANELS AND SIDES. I'LL SEND A COPY OF THE SPEC SHEET TO SERIOUS BIDDERS. SEE OSTERMAN RECEIVER BOOK FOR A SUMMARY OF THE 8718A (IT'S SO RARE IT ALMOST NEVER APPEARS ON THE USED MARKET). THOSE "IN THE KNOW" KNOW THAT FAIR RADIO SALES NOW ASKING OVER $2,000 FOR 8718'S. I'M STARTING A BID AT $1200. NO REGULAR CHECKS -- CERTIFIED OR MONEY ORDER ONLY. SHIPMENT ON CLEARANCE. I'LL RESPOND TO EMAIL REQUESTS FOR ADDITIONAL INFO.

DRAKE R-8: PURCHASED NEW IN 1993, BARELY USED AND IN MINT CONDITION, WITH DRAKE MS-8 SPEAKER, TECH MANUAL. LOOKING FOR SOMEONE WHO APPRECIATES THE ORIGINAL OF THE NEW DRAKES -- FRONT PANEL UNCLUTTERED BY TOO MANY BUTTONS, PERFORMANCE TOP RATE. ASKING $600 -- IN ORIGINAL BOX -- NOT A SCRATCH. PICKUP OR YOU PAY SHIPPING.

SONY SW-1: FULL KIT IN ORIGINAL SONY CARRYING CASE WITH EXTERNAL ANTENNA, POWER SUPPLY, ETC. PURCHASED TWO YEARS AGO IN SINGAPORE AND BARELY USED. THE CLASSIC SW-1 IS STILL USED BY JOURNALISTS AROUND THE WORLD WHO WANT A SUPER- SMALL, SENSITIVE, RECEIVER THAT CAN GET IN YOUR SHIRT POCKET. FOR THOSE WHO APPRECIATE CLASSIC DESIGN, THE SW-1 HAS PUSHBUTTONS THAT ARE SMOOTH AS SILK -- IN LOGICAL PLACEMENT. ALTHOUGH READOUT IS ONLY TO 5 KHZ, THE SW-1 IS AN ON-THE- ROAD MIRACLE WORKER WITH A GOOD SPEAKER AND STEREO SOUND FOR HEADPHONES TO BOOT. COMES WITH SONY LEATHER CARRYING CASE, ORIGINAL MANUALS, ETC. PICKUP OR YOUR PAY

SHIPPING.

Hello, de Jim, N1MAA...Have a very nice and RARE Hammarlund HQ-215. This receiver can be best described as a solid state Collins 75S3C. Has Collins 2.1 mechanical filter, with room for 2 more, 6.0 and .800. These filters are the FA series. Has extended receive. Will xceive with Collins 32S series xmitters. I am looking for help pricing this radio. I think it is worth around $800,(more or less) but offers are welcome. I am aslo willing to take trades. Looking for Central Electronics 100/200V, Hallicrafters HT-32A/B, Collins 75A1/4,32V, 51J, 51S1, or KWM 2A. Tnx, Happy Holidays, es 73. Jim N1MAA

One mod that I've found that works is to change the R.F and mixer
fet's (3SK40's) to a 3N211's. You can try the ECG equivalent, but I
found the 3N211 works much better. Your sensitivity and noise floor
will improve. You'll have to readjust your "S"meter, zero beat your
calibrater on 14.200 and set to "S"9.

Good luck on the mod..... "73" Gary KF9CM

AOL users --- Please join us for an on-line swap meet, Monday night at 9:00 Central time in "Special Interests -- Antique Radio Swap Meet".

The purpose of this chat is to create an on-line forum to trade radios, parts, schematics, test equipment and other related items. We will try to stick to those topics.

Let's give it a try this Monday, Dec 22nd. All suggestions, comments, etc welcome. Spread the word for a great turnout.

Garret,

Check in old radio handbooks for "Arithmetic Selectivity".

The bandwidth of a resonant circuit is a ratio. Ever notice
that a receiver that has no RF stage, and only one tuned
circuit in the antenna has good image rejection at say 6 MHz,
but is totally inadequate at 16 MHz? Thats because the image
is 910 kHz away -- the tuned circuit has good rejection at 6 MHz,
but isn't sharp enough at 16 MHz to offer much rejection.

Let's say you have a coil and capacitor in a resonant circuit
at 6 MHz. You find the response is down 20 dB at 500 kHz
either side of resonance. If you were to scale the coil and
cap down to 600 kHz, the circuit would be down 20 dB at
only 50 kHz either side of resonance. Scale the coil and
cap to 60 kHz, and the 20 dB bandwidth would be 5 kHz.
Going in the other direction, scale the coil and cap so they
are resonant at 600 MHz, and your 20 dB bandwidth would
be a whooping 50 MHz!!!!

This is why early radios used a low IF frequency as possible;
the lower the IF, the easier to get selectivity. The tradeoff???
The lower the IF, the closer the image frequencies and the
more RF stages needed in the frontend.

For your 50 kHz IF, any radio using such a low IF was
multiple conversion. The first IF was higher for good
image rejection, the second IF chosen for best selectivity.

I hope this helps you.

I'm building a self excited Hartley based transmitter from a magazine article from 1932. I could not find a T-45, 210 or 245 tube mentioned but I do have a 201.

Does anyone have a base diagram for a 201?

It has 4 pins - two are filament - one is grid and the other plate. I could hook it and guess... but that's my only one and I hate to fry it.

- FYI - I built a 30 - 30 regen RXvr from another article and some old radio parts from the 30's. It looks really cool and works suprisingly well. Good enough as a station RX for 80 and 40. If I can get the transmitter working, I'd have a early 30's QRP station.

Can't travel back in time... but this is the next best thing...

For a given Q, the bandwidth (measured in Hz) of a low frequency
resonant circuit will be less than a high frequency resonant circuit.
The bandwidth measured in percent of resonant frequency will be the
same.

That is the reason Hallicrafters (and others) use second IFs of 50 KHz,
100 Kc, 200 KHz, etc. It is easier to get narrow bandwidths for SSB/CW
through L/C filters at those frequencies than at 455 or 1600-1700 KHz.

Most have a high-Q circuit for their narrowest bandwidth, then spoil the
Q by adding resistance to get SSB and AM bandwidths.

When I built MY Heath marker generator years ago I was surprised to
have a crystal left over when it was finished. Now I have been saving
that crystal for about 20 years and had sudden visions of reaping a
vast fortune on its sale to someone who now desperately needed it ;-)

Unfortunately, I find that my spare is the 3.08 MHz. Sorry.

Source record: 113002

The short answer is the closer the IF frequency is to audio frequencies, the more you'll need to lowpass filter the output of the detector to keep the IF from feeding into the audio amplifier stages. Since most of the receivers I've looked at with low IFs (like 50 kHz or should I say 50 kc) use only a simple RC type filter on the output of the detector stages, not much rejection of 50 kHz is available at say, 5 kHz, unless the cutoff frequency of the filter is set very low. Once this is done, the higher audio frequencies are now attenuated too.

Some receivers used an IF trap (notch filter at the IF frequency) to reduce the IF feed through. This approach should affect the higher audio frequencies much less. Another approach is to utilize a multi-element LC filter on the output of the detector with the cutoff set at the highest desired audio frequency. The sharper cutoff characteristics of this type of filter would provide enough attenuation of the 50kHz IF and still pass audio up to 10 or 15 kHz. I've never seen this done in a BA type receiver.

Terry, there are tons of on-line swaps available on the Internet that
are not limited to AOL-ers, but which can be participated in by ANYONE
with a web browsewr, including AOL folks.

See the information on this at:

http://www.mnsinc.com/bry/hamlynx/hambuy.htm

I hope that's helpful.

Hi. Wonder if anyone has a Hallicrafters SR-75 set? This is an AC/DC receiver that looks like a S-38 (Has two half-moon tuning dials), but has a slide switch marked "TRANSMIT/RECEIVE" on the lower right-hand side of the front panel instead of "RECEIVE/STANDBY". I had one as a kid and would like to find one again.

Ron has been a subscriber on the BOATANCHORS LIST for quite a while and I have never read of anyone having a bad experience in dealing with him. Although I have not had any direct dealings with him I know him to be a knowledgeable ham who often gives away stuff for the cost of the shipping.

Maybe he has two such radios or didn't delete the posting. So I feel that you should not post such a message so publically casting Ron in a bad light before making sure of your facts.

Geez!

I wouldn't think of paying anything less than $950 for a Hallicrafters SX-101A. Since you are offering it cheap, I am not interested. You didn't mention the speaker. It must be worth at least $600. By the way, I have an SX-25. It is older and better, and it has a speaker.

Um, I saw at leat 5 complaints- I mean, I wouldn't want you to
under-sell yourself when you could charge $750 for it. Do duplicate
complaints count? If so, now consider it $800.

Ethan

>Frankly, all of this about who's monitoring who is a total waste of time
>and bandwidth -- as is this comment of mine on the same tired subject.

1) why not waste bandwidth? this is 1997, not 1907.
we could really save bandwidth, and have no comments
allowed at all, only nomenclature & price.

2) and yes, price monitoring is a waste of time. if someone wants
to pay $500 for a Heathkit and they're happy with what they buy,
and they actually receive what they send their
money away for, fine. besides, $500 for one person may be like
$50 for another person. and a rank beginner is
probably not going to slap down $500 for some radio that
he has never seen a photo & description of, anyway.

I just picked an interesting radio. It is a Dr. Pepper radio. The owner thought it was from the late 40's / early 50's. It has a green wood case that is made to look like a cooler/chest pop machine. The tuning and volume are on the top and the speaker is mounted on the side. The speaker cloth has the famous 10, 2 and 4 clock on it.

I'm curious if anyone has seen this and roughly what it would be worth. It has some scratches, but it does work!

73,
Joe

Jihad,what are you some kinda furriner?

Speaking of not having a life I noticed your two posts to the NG were
pissing and moaning about someone commenting on the price of
equipment.

At least I MAY be helping someone avoid a gouger like DALVES.

Just what the hell is YOUR purpose in posting this meaningless drivel
other than to add a (very) little purpose to your otherwise
MEANINGLESS existence.

Source record: 112938

A friend of mine just picked up a Gonset Communicator III and a really funky little 2 Meter amplifier.

This amp really intrigues me. It is about 1 foot cubed. It has a little window in the front and you can peak in at the two 826 tubes.

I cannot find any info on the 826????

The amp does not appear to have a keying line. Is something of this vintage RF sensed?

Is anyone out there familiar with this amp?

How much power does it make?

I'd be interested to find out. There is no manual available and the amp is in real nice shape. I would like to hook it up and try it out.

Any information would be appreciated.

Merry Christmas!

Gentle Reader:

My father has hearing loss resulting from combat artillery.

His hearing is 80% up to 5K Hz then drops off very sharply
and remains low for the remainder of audio frequencies.

He wants a radio with broadcast AM/FM and SW.

I was thinking the sony 2010 would be a good choice but I
don't know if it has good enough audio.

$350 is the top of his budget so the 2010 fits.

Portable is not necessary.

It may be best to get a good radio and add some amplified
high quality speakers.

It may be necessary to have an equalizer to match the output
to his particular needs, but then the cost becomes prohibitive.

Any and all suggestions will be appreciated. Especially from
someone who has a similar condition and can relate.

Thank you for your time
Ed Soniat

Probably the best known stand-alone commercial DSB(SC) transmitter was
the WRL DSB-100 Sidebander. These were produced in the late 50's. The
Central Electronics 100V/200V transmitters also had a DSB capability.

Maybe it is about time to end the price discussion and remember
what the purpose of this newsgroup is.

There were some interesting articles about the HRO-500 in Electric
Radio. I got interested and bought a HRO-500 for my collection new
in box last week because of these articles. It is a fossil. It looks
like and is build like a boatanchor but it is solid state.

I just saw a HRO-600 in Fred Osterman's book. Never heard about that
one before. Seems to be pretty rare. Has anybody ever owned one?

> -- on this list !) , well, SO WHAT ? Do we need Price
>Gestapo to manage all sales ?

First of all he's not managing ALL sales, he's commenting on this one. And a couple other ones, so let's return to issues here.

The issue is not whether this radio is overpriced. Nor whether some nitwit wants to fork over his hard earned cash for it. The issue is what it does to prices of radios, not only this model, but eventually all special interst radios.

Word spreads when someone reads that the asking price on a HRO is pushing 2 kilobucks. When that word spreads, more speculators figuring that if this guy can get $2k for his HRO, what can I get for mine, and raise the price of ALL the HROs to cash in on the market. The spiralling prices eventually splash down to the NC-173s, for example, and eventually to other desireable radios, and their parts, making this hobby less of a hobby, and more of a speculator's business.

I will remind you what happened to the classic car hobby less than a decade ago. When Tom Monaghan had the money and lavished it everywhere simply because he could, without respect to value, and drove classic car prices and their parts through the sky. Those lucky few who had owned an original Cobra, for example and lovingly cared for it through the years, could no longer maintain it as parts prices began to approach the original selling price of the car itself. The hobby almost overnight became closed to nearly all of its most ardent supporters. And it became a collector's market driven by only a very well heeled few.

Not suggesting that Tom Monaghan is interested in an HRO 500, but those of us that are, do not wish to see such outrageous prices become commonplace. Nor do we wish to see even the staples of the hobby like the NC-173s, NC 88s, or the Hallicrafters like S-53s, SX 43s, and Hammarlunds, and their like and their kind, become more costly than is practical to use them. And the highly public forum such as this allows a single speculator with the balls to publish an outrageous price to start a chain of speculation events that will take this from a hobby of gentlemen, with a true interest in these radios, to a collector's market, involving people who are not interested at all in these radios for their functionality, their nostalgic value, or their intrinsic worth, but only for the money. Taking these radios out of the hands of those who will enjoy and cherish them, and putting them into the hands of those who will only put them on shelves, with even higher price tags.

Keep in mind that Tom Monaghan, and his well heeled peers, have never ever driven the cars for which they paid so much money. They have only taken them out of circulation and priced everyone else out of the market.

Do we need a Price Gestapo? No. And we are not talking about Price Gestapo, so lets stop the National Enquirer extremes. But do we need vigilance? Yes, Or we could be looking to find other things to do with out time on what limited resources the majority of hobbyists have.

Source record: 112956
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

This note may be too little and too late.....

As many know, the Electronics Equipment Bank (EEB) in Vienna, Virginia is apparently closing up the retail shop operation. The current plan is that they will be open on Saturdays until the first of the year. That may mean they will be open on the 27th of December, although they normally close during the holidays.

Why is this important here.....

For those of you who have been in the shop, the owner (Dick) has a quite extensive Boat Anchor collection, some of which is on display on a shelf that runs around the ceiling. It is for sale! Each item now has a price tag on it. All the regular BA names are there, Heath, Knight, Halliscratcher, National, Gonset, etc.

I do not know what else is in the attic, much was apparently let go during the various building moves over the years. If they are open on the 27th, it might be worth a visit. If you've seen something recently, it might be worth a call. Did not see any tags very high. ARC-5 TX in great shape was $50.00, etc. As they cleared out the stock, there was some shooting from the hip at the counter which resulted in some very nice buys!

If you live in the area, and have "transport" it might be worth a call and visit. I could visualize a package deal here.....

I don't even know what a SX-101A is, but I was bored, and I thought your attitude appeared so self-defeating, I couldn't help but wonder if you'd actually raise your price (which I assumed was already on the steep side) if someone had the audacity to express the opinion that it seemed high.

A cursory search of rec.radio.* (using "SX-101A") found 7 different units/sellers (not including yours), avg. price was $144, mean was $125. Being an official price cop, I'd like to lodge a formal complaint against you for charging 4X typical selling price for this unit.

Officer Ethan, WWWPD

Peter

An excellent reply. I have seen this happen with many radios.
SX-28 sets were made by the tens of thousands. I am sure
the majority still exist. The SX-28 is a very desirable radio --
but I doubt they are "scarce". In the past several issues of
ARC one person has been commanding a $535.00 price
for his SX-28 radios. As you noted, everyone else is inclined
to follow suit for the reasons you outlined.

I am not in favor of "flame wars" on Newsgroups; but when a
price is way out of line and posted in a PUBLIC forum, folks
have a right to question their validity.

Bravo!!!!

Peter

5549. UNASSEMBLED HEATHKIT DX-100 TRANSMITTER FOR SALE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-21 00:00:00 UTC
From: wb9gkz@aol.com
Message-ID: <19971221205401.PAA18357@ladder02.news.aol.com>
Source record: 112962

For Sale: I have an unassembled Heathkit DX-100 transmitter for sale. The transmitter is not "pristine" or "mint". Its assembly was started by its owner in 1956 and abruptly stopped after he assembled the cabinet and a few parts on the VFO. Only some mechanical construction was started. No components were soldered. The cabinet and kit contents were stored for some forty years. Some parts are still in their boxes (tubes, caps, tube sockets). Some parts were unwrapped and stored in other boxes. Therefore, some parts are cleaner than others. I do not have the assembly manual. The kit may be missing parts.

I will be inventorying the kit against a parts list to verify what, if anything, is
missing before sale.

This could be a wonderful project for the serious Heath collector. Please contact me via e-mail to make me an offer on it. I will let you know the status of the parts inventory and answer other questions you may have on the condition of the parts, panels, chassis, etc.

Source record: 112963
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,uk.radio.amateur,alt.ham-radio.marketplace

I am thinking of compiling a list for Uk collectors
of mil gear, as post from other lands is usually
quite high and prohibits purchase.

If you would like to go on the list then we will see
how many we get and if worthwhile, we could start
our own mil group, passing around items for sale swap.

Or has anyone a better suggestion ?

cheers, Ben G4BXD@compuserve.com

Sirs,
My intent is NOT to start a "flame war".

I couldn't explain myself better than Peter so I wont try.

But I can tell you this their are certain of our "fraternity"
on the NG's who are consistently asking WAY to much for radio
equipment.

And I AM going to call them to task.

I don't care WHO objects.

A ham who cares.

5561. W0OIZ...the real story

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-22 00:00:00 UTC
From: jls <jls@tminet.com>
Message-ID: <349F18C8.A2C9C7C6@tminet.com>
Source record: 112774
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I am the amateur who purchased the Icom 730 package from Ron, W0OIZ. Many of you have contacted me and asked that I comment publicly on this incident. I believe all of the facts are known and now is the time to do this. While Ron seems to have many friends in this group and according to some of them a good reputation buying and selling radio equipment, the manner in which he treated me remains a mystery. To make a very long story short, I sought an Icom 730 by posting to this newsgroup last last month. Another amateur suggested I contact Ron about a 730 he might be selling. Ron and I did get together by email and we arranged the purchase. I was somewhat apprehensive about a long distance deal arranged by internet and asked Ron how we might proceed. He wrote a very nice, long letter that spoke of trust and set up a means for confirmation and verification beneficial to both parties during the transaction. Five basic conditions were set. Ron wanted complete contact information from me. I provided that. He then asked that I send funds by personal check. I did that. He said that he would confirm receipt of funds by email. He did not do that. He said that he would alert me when the radio had been shipped. He did not do that. Finally, he said that upon shipment he would provide me with a UPS tracking number so that the equipment could be in his words "tracked right to your door". That did not happen either. I confirmed receipt of funds through my bank. A week went by and not hearing from Ron I called him by telephone and asked if the gear had been shipped and what the tracking number was. Ron said that the gear had been shipped but that he had no UPS tracking number. He went on to say that the driver had scribbled an illegible number on a piece of paper and that further it was lost somewhere in the next room. We concluded the call amicably. I thought about this for a while and decided to call him again to see if the tracking number had been found. Ron said that he could not find the number and further said that he could not remember whether the gear had been shipped by UPS or U.S.P.S. I reminded him of the verification process he had outlined in the letter and asked if he might try to recover the number. At that point Ron became abusive and profane, accusing me of questioning his integrity. I made it clear that I was just trying to find out what was going on with the shipment. The call concluded shortly after with both parties at loggerheads. A short while later Ron posted the equipment in question as for sale to this newsgroup. I could not believe my eyes! He was advertising equipment as for sale that was supposedly in shipment to me. I thought that I was being defrauded of my money and made a post to that affect. I could not understand why this person who I thought was a gentleman had so quickly turned the corner and become someone unfamiliar to me. To conclude, the equipment arrived here the very next day in good condition and

exactly as Ron had represented it to be. Subsequent to this Ron made a post about this here saying that he wanted HIS equipment back and that he was sending money to me. In my book once something is paid for it is the property of the buyer! His money order arrived the very next day and the very next morning it was on the way back to him. According to his post today, he has his funds. If Ron had followed through with the transaction the way he said it should happen all of the bandwidth expended here would have been available for other purposes. I wish Ron the best and hope that in the future he will reasonably follow through with agreements, especially those where he defines the conditions.

73 and Merry Christmas,

Jeff KG6UC

Dave,

I'd be surprised if there's much left to pick over. I saw Dick
escorting a gentleman of Oriental descent (Japanese?) and his assistant
(son?) (dressed in suits) around the store weeks ago, and there was much
pointing at the gear along the ceiling with words like "You'd be
interested in this one too? Ok!" and some writing on a pad... But maybe
there's something still worth looking at. Who knows?...

Jim:

Picked up a PTT mike the other day in a junk pile. Element may be OK.
Seems to be carbon. Cable connection is bad. Has switch on top to push
on and off. It says Magnavox Co NAF 213264-6 on it.

If interested, we can discuss...

Source record: 112784

I think the debate over price is valid -- but some receivers (not necessarily the HRO500) are going to be sought after due to condition and reputation. Among the Hammarlunds, the 180 series is an obvious. In Hallicrafters, excellent to mint condition 28's or 28A's might also demand a premium. In Collins the 51J4's/R388's/and even some of the 51J3/J2 models would command a higher price, especially for Collins collectors. But how do we figure on a HRO500 (remember the 600?) new in box (which I presume is true) for nearly $2,000???

5572. Hallicrafters SX-100 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-22 00:00:00 UTC

Source record: 112785
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hallicrafters SX-100 receiver. Very clean receiver, works
good on all bands but needs to be peaked on the high frequency
band. Very good condition, two slight paint worn spots on top of
cabinet, but overall looks very good. Will sell for $175 or trade
for other equipment. UPS should run about $20-25 depending
on your location.

Being that it is the Christmas season and all, I thought I would take advantage and launch one of my periodic pleas for unobtanium:

WANTED BY N2CQR:

One 2-4 Mc. plug in coil for a B&W Little Dipper. (Wouldn't you know it, I've got all the rest, but that's the one I really need!)

Driver plate coil and switch assembly for DX-60 or DX-60B. (I'm currently stranded on 40, the victim of a previous owners perverse attempt to put this rig on 10 Ghz or one of those other weird bands.)

Lafayette HA-600A Receiver. Rid yourself of this solid state radio! Move your shack closer to "tube only" status! Send it to me! I need it for nostalgia purposes (Christmas present, 1973!)

Tuning dial skirt for the Drake 2-B receiver.

Merry Christmas to all! May all your shacks be warmed by the glow of thermionic emission!

73 de N2CQR Bill

5577. Re: Gonset 2 Meter Amp: Info Sought

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-22 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <19971222013601.UAA18383@ladder01.news.aol.com>
Source record: 112830

Hello Don,

The only info I can find on your Gonset comes from the product review in QST for October, 1955. This linear was meant to boost the output of the Communicator by about 10 dB or so. It's an AM linear, though it could probably be used on other modes with some modifications.

There were models for both 6 and 2 meters, with identical layouts and tube complements. Plate voltage is 1050 to 1100, supplied by two 5U4GBs in a series arrangement, and there is a selenium rectifier for bias.

The two 826's are in push pull, and are neutralized. Tuneup consists of applying about 6 watts of drive (about what you get from the Communicator) and adjusting the controls for the brightest indication of the tuning lamp that will permit upward modulation. In AM service, this means a plate current of about 225 ma. with carrier only, and an output of 40-50 watts.

Control of the amplifier works like this: Two cables are needed between the linear and the Communicator. One connects the Communicator output (the regular antenna connector) to the amplifier input, and the other connects the Communicator's receiver antenna input to the linear. (The amplifier has an internal antenna relay, and the rig it is used with has to have a separate receiver antenna connection). The antenna relay in the linear is connected in series with the 826 cathodes, and picks up at about 100 ma. The amplifier has B+ on the 826's at all times, but they draw very little current with no drive. When drive is applied, the 826's draw more current, and the relay closes. I guess it qualifies as RF sensing, but not as we usually think of it.

BE CAREFUL WITH THIS THING! The 1100 volts B+ appears as soon as the unit is turned on, and is present at many points inside the unit.

The 826 is a VHF/UHF triode of WW2 vintage originally meant for early radar sets. They were common in surplus at a quarter apiece, because they are so unusual compared to conventional tubes. Here are some ratings:

Type 826 Power Triode
7 pin Septar socket, max ratings to 250 MHz, reduced ratings to 300 MHz.
Ratings are for one tube.

Base connections:
Pins 1&7: Plate
Pins 3&5: Grid
Pins 2&6: Filament
Pin 4 (the big one): Filament midtap

Filament: 7.5 volts 4 amps
Amp. Factor: 41

Cin: 3 pf
Cout: 1.1 pf
Cgp: 2.9 pf
Plate shows cherry red to orange red color at maximum dissipation.

Maximum ratings:
Plate Dissipation: 55 watts
Plate Volts: 1000 Volts
Plate Current: 140 ma.
DC Grid Current: 40 ma.

Typical operation (First number is CW, second is plate modulated AM)
Plate Voltage: 1000 1000 V
Grid Voltage: -70 -160 V
Plate Current: 130 95 ma.
Grid Current: 35 40 ma.
Driving Power: 5.8 11.5 watts
Power Output: 90 70 watts

Hope this is helpful.

73 de N2EY

Becareful with those tubes!!! 826s that haven't been used
for years should have their filament voltages brought up
from 0 volts to the operating voltage over a period of about
one hour. This is best done with a filament transformer
and variac. I had two or three instantly poop their filaments
when I applied filament voltage several years ago.
An old-timer set me straight on the filament reconditioning.

About the best you can get boatanchor-wise would be the Hammarlund SP series.They even made one in a nice console cabinet with a minimum of knobs to market to home use.But if you really want the best,no holds barred,no compromise fidelity the only choice is one of the E.H. Scott radios.
The All-Wave 23 uses four 2A3's in push-pull-parallel to develop about thirty watts class A to drive two jensen 5" field coil tweeters and a 12" magnavox auditorium field coil with 2" voice coil and curvelinear cone. All stock and in 1935 no less. The four stage IF strip was capacitively coupled and was continuously variable. Audio amplification was all push-pull except for the first stage and transformer coupled as well.I'm finally happy at last after owning many boat anchors but this one is so far superior as far as fidelity is concearned that all the stuff mentioned in the other posts performes the job feebly at best,sorry but theradio is simply that good!

look......
comments on price are appropriate
but The Price Ranger? do YOU really need someone to
tell you not to spend your money ?
btw, Price Ranger, don't buy that radio, save the money
for a dictionary, or a remedial English class.
friends, the genie is already out of the bottle. did you greet
the latest Illustrated Price Guide with welcome? you
probably did, but when one of these is published, your
hobby has made the "bigtime" and the spiral begins.
this is an open market, for better or worse. sure there are
speculators in this market, as there are in any market that's
overheated. if you want a different environment, you
might want to think about one of the moderated interest
groups, where there there's a civil, non-ripoff trading
environment.
the analogy to the collector car market is interesting.
but frankly i think it's kinda too late already. you're
not dealing with just one speculator, there's the whole
thing with ARC, Ebay, Bill & Sue's Illustrated Price
Guide for you name it, Japane$e buyer$, and so on....
regards, hue

5583. Silly Economics

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-22 00:00:00 UTC
From: dxguy@earthlink.NET
Message-ID: <349DF9DF.3B37@earthlink.net>
Source record: 112836

I have been supressing major laughter here, following the hysterics of the HRO-500 "price-wars". You'd think that the poor schmuck who placed the ad had started WW-II or invented cancer. C'mon guys, get lives. If the collective energy & time were spent at a productive endeavor, I'm sure enough capaital would have been generated to buy... oh, perhaps an HRO-500 at market price. Whatever market price is.

Most hams I know (and have known over 35 years) are fairly conservative folk, tending to the Republican notion of free & open markets - sans outside interference (ie. gov't regulations or price setting) - or even Libertarian, bordering on the anarchistic. We all "shop" all of the time. The market offers a plethora of opportunities, and prices for anything you could ever want. The price is set by willing participants, buyer & seller. The notion of being "overpriced" is relative, and STRICTLY the seller's perogative. If you don't like the price make a counter-offer, or move on. You didn't really want it that badly. If someone else buys it, he wanted it more than you. What could be more democratic & fair? The price is ultimately set by the scarcity & demand (this is too basic though, we all studied basic economics, and we all understand how this works, right?).

I can think of a very rare thing that has no market value whatsoever - how about a nice autograph of my aunt on a 1996 Christmas card? It's quite rare, she only wrote about 10 or 20 times per year, and I'm sure all of these are in the trash by now. Any takers? How about something very common, it's in the ground everywhere - yopu just have to dig a bit & you'll find some. It's gold. Found everywhere, right out of the ground, but very valuable. Supply & demand. Just like Ford Cobras. Someone wrote (with a somewhat tragic tone) that ALL of the poor slobs who owned these cars couldn't afford to keep them because the price of parts was too high! Gimme a break! These were always expensive cars with a very limited utility and virtually no production - there are fewer than 1,000 examples extant. The demand was very high when they were new (mostly race teams), and as the years go by, the demand is even greater. The poor slob who can't afford parts CAN, however, sell the thing for sveral hundred thousand dollars. Poor guy! Are you all suggesting that it would be a good thing for a bunch of hysterical mamby-pamby folk to run around wringing their hands and shouting "...it's not worth that much! It's not worth that much!"?

The notion that, suddenly, run-of-the-mill radios made by the tousands will rise to the heights of the Cobra, is too funny for words (although I've managed to generate a few flatulent one's here - hi). If they do, it only validates our hobby (and what we've been telling our wives for years - "But dear, these radios are worth a lot of money, I can't throw

them away") by showing that these old junkers are really worth something & they are desireable. Remember, for every Cobra made, there were probably 1,000,000 "normal cars made in any given year - there's one for you, at just the right price.

PS: I also think the HRO-500 is a crappy radio, and 1700 is way more than I would spend, even though I really wanted one when I read the write-up in Popular Electronics (1965 or 66?).

In article <19971221184201.NAA05612@ladder02.news.aol.com>, petermaus@aol.com (Peter Maus) wrote:
<snip . . an excellent reply>

I couldn't agree with Peter more about the pricing of radios in our hobby. I've made similar comments in the past and been reminded, sometimes rather forcefully, of the so-called "law of supply and demand". Well, IMHO, we're talkin' radios here and not just economics. True, a seller is free to price the radio at whatever price the seller feels appropriate. Also true, buyers are free to accept or decline, and make comments.

But, as Peter points out, the real danger is that everyday people may be priced out of the BA hobby by people with too many dollars and not enough sense (pun intended!). For example, I once saw a Hallicrafters S-38 in an antique shop priced at $150. Now, most of us know an S-38 is not a $150 radio; it may be barely a $50 radio. There are just too many of them about and it's not outstanding in terms of circuitry or performance, even though it is a great little "starter" radio.

Getting back to the radio that started this, I paid (in 1992 or so) $500 for my HRO-500. It was in great cosmetic shape, and was a series 140 (the latest run and, with the 88 run, the most desirable, or so I'm told). Even though the radio wasn't working when I received it, I considered that a fair price, as did the seller. And even though I've put in a fair amount of work on it (as 500 owners will tell you is necessary!), were I to sell it, it'd get a $500 price tag on it. These radios just aren't worth, again IMHO, more than that.

Bottom line is let's keep this hobby affordable for all, and most definitely all, buyer and seller alike, will benefit.

my comments, (still a bargain at $ .02 worth!)

to comment on some insane price is fine but i (maybe
mistakenly) got the impression that the Price Cops
would only be happy if this price were not posted
(i.e. censorship) or was lowered (violation of seller's
rights).
where is this mythical newbie who's in danger of blowing
$1900 on an HRO-500 ?? if this mythical person cannot
search the newsgroups and see a new crated HRO-500
for $500 less than that, this very weekend, then he perhaps
should be shown how to look and read ads. also, if this
supposed potential victim has near to $2k to blow on a
radio, and he contemplates buying an old radio, that face
it, doesn't work nearly as well as a current model for half
that, how are you going to help him thru every day?
lastly, when was the last time the Price Cop warned a
seller, "You're selling this much too low! You're robbing
yourself!"
It might be fun to rag on some seller with his head in the
clouds, but public service, "yah, right......"
btw, i too longed for one of these back in 1965-66.
now, i don't even want one for cheap.

I don't phrase it quite like that, but I often tell Sellers (of stuff
that I'm actually interested in/trying to purchase) that the piece
they're selling is worth more then they are asking.

Ethan

Make that $850 Jeff...

$800 is WAY too much (grin!)

Message-ID: <19971222135800.IAA06406@ladder01.news.aol.com>
Source record: 112846

I have 2 SX-42's for sale. #1 works on 1 or 2 bands and is complete with cabinet, knobs, etc. The bandswitch will need some work. Price -$150 plus shipping.

2 is complete except for the small topside audio transformer (?) but is untested. Line cord missing.Price -$100 plus shipping.

Both sets are good cosmetically. These are large, heavy radios.

5596. Re: Gonset 2 Meter Amp: Info Sought

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-22 00:00:00 UTC
From: Steve <amradioNOSPAM@thebizlink.com>
Message-ID: <349E8E53.49BA@thebizlink.com>
Source record: 112849

A friend of mine uses one on 6 meter FM. He gets well over 100 watts output (I think more like 150). The big viewing window serves a purpose. Since the amp does not have a plate ammeter, you tune by minimizing the glow of the plates. As Bill said, you'll know you've loaded heavily enough when the plates have a nice orange-red color. If you plan to use it with a transceiver, you'll need to intall a switching arrangement to bypass the amp on receive.

The yellow colored units were the CD models.

Heinz:

Sent your relays to Martina last week. They might be there now.

Have the following:

1942 Good to very good condition. Front cover some wear and loose but intact; can be reattached with craft glue. Inside excellent; pages are like new. $28
1968 Cover worn but binding excellent. Pages excellent. $15
1971 Cover excellent; pages excellent with some foxing. $15
1981 Excellent with cover, pages like new; ex-librus library copy. $15

Best Regards, Hal K3AB/7

I agree more or less (I have a very fine-sounding Scott All-Wave 12), but
it ain't a BA. No BFO. If you want to go in this direction, H. H. Scott
(or was it Fisher??...) built a SW/FM tuner in the late 60's which could
be hooked up to your McIntosh driving Altec Duplex 602's....

I have a quantity of old magazines for sale or trade.
"Radio Craft" from 1934 thru 1938, "Short Wave Craft" 1935,
(Both Hugh Gernsback publications).
"Service" 1935 thru 1941, this dealt with servicing consumer
radios.
"Radio Engineering", later changed to "Communications" 1937 thru
1944. Dealt mostly with broadcast radio industry and technical matters.

Some are in extremely good shape, some have torn covers, some have
termite damage. I will entertain cash offers and trades.

I am looking for old radio texts from the 1920's and 1930's,
ARRL/JONES "Handbooks" of the same era. I am interested in moving
the entire lot or by the year only. Not individual issues please.
If you want a complete list, let me know.

Hi all,
I'm looking for info on an old receiver that my father and I used when I was a kid. It was a Pierson KP-81 or a KP-88, I can't remember correctly. It was an electro-mechanical nightmare.

I was wondering if anyone out there had ever heard of it or used one? Also, I'd like any help finding one and/or accompanying documentation.

I know it's a longshot, but....what the heck.

Now back to my newfangled Drake C-line :-)

Please respond via e-mail to rowemb@bga.com

Thanks in advance

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for High End computer EQ. will be considered. All working last time tested unless noted. Shipping will be added to each item
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $250

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $225.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $250.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$125

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $150

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - As new. Purchased 4-5 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz. $150+ shipping.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volums, some continous: numbers as follow: Continous 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $5 each.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $100

• Craig- 6" Reel to Reel Stereo Tape Recorder. $50

5624. ATTN: Collins R-390 owners

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-23 00:00:00 UTC
From: cccacutts@mindspring.com
Message-ID: <67o6qc$mus@camel15.mindspring.com>
Source record: 112795

If you own a Collins R-390 you might want to get one of these 3TF7 Ballest tubes from AES. They have been going for $28 to $32, but AES has them on sale for $10. I bought 2 of them for my R-390 and I am glad I waited until now to buy them.

Just thought you guys would like to know.

Allen

Truly mint equipment (NIB and never used) is exceedingly rare - I'd say it's out of the scope of generally-accepted pricing. Might be worth $5 or $50,000. 'Course, like a collectible firearm, once you "shoot" it even once, it's all over,

Looking for a National NC-170 or any other model that is painted with the original "cosmic blue". Original painting must be in good condition.

5631. TV-7 maintenance hints needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-23 00:00:00 UTC
From: betif@mailmac.macbbs.com.br
Message-ID: <betif-2312971414540001@d1p17.macbbs.com.br>
Source record: 112802

I recently bought a used-checked TV-7D/U military tube tester from the nice folks at Fair Radio Sales. The unity seems to be working fine, but while trying to tune up some minor details, a few points appeared:

i) how to tighten up the nuts for the main switches? They are mounted on a sub-panel, covered by the front panel, and that sub panel is seemingly unremovable without "destroying" the unit;

ii) where to find the three (7-pin mini, 9-pin mini and octal) low profile socket savers? The only one I found for sale is the Pomona SS-7 (7-pin mini) at AES, and is considerably higher (I'm afraid of oscillations while testing high-transconductance tubes); by the way, is the octal socket saver needed (I thought octal sockets were rugged enough for that use);

iii) my mains supply is 127V, and the line adjust rheostat runs too hot; is there any inconvenience in leaving it working this way?

iv) about the tubes: is it OK to the 83 rectifier to work in the horizontal position? My RCA manual reads "vertical mount only". Is the JAN 83 a special version that overcomes this? And what about the 5Y3GTB? The TV-7 manual reads "do not downgrade to 5Y3GT". What happens if I do it?

Any hints will be greatly appreciated!

5634. Trade computer equip. for older CW or CW/SSB transeiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-23 00:00:00 UTC
From: hcripe@sprintmail.com
Message-ID: <34a0ec32.9500344@nntp.a001.sprintmail.com>
Source record: 112805

I am looking for an older inexpensive tranceiver for my 8 yr old son
to start working CW on. I have various computer equipment to trade:

2 hard drives (240meg, 320meg)
2 dot matrix printers (one wide carriage)
Near new daisy wheel printer
PC with 386 DX/40 motherboard
800x600 VGA monitor
SCSI 2x CD drive
Colorado 250meg tape trive (internal)
Misc i/o cards, cables, etc.

Email with description of equipment and what you would need to trade
(or sell, if inexpensive).

Thanks,

Howard Cripe
WB5YES (Kansas City area)

Message-ID: <349FF015.E522F0AE@erols.com>
Source record: 112806

Looking for a mint* Viking II. I intend to use it as a collection piece and to use it. Hopefully (but not exclusively), I'll find one in the mid-Atlantic area where I can have a look before buying. (* mint: looking for one as good as they come). As an addendum, so long as the front panel, knobs, etc are original, intact, and both the panel itself and the "guts" are very clean, I can refinish the case as I understand this can be a problem area. VFO 122 also considered. Thanks.

5636. Info on PR112/GR

Source record: 112808

I'm happy to say that the SX-101A rcvr, originally advertised for only $500, was sold for $850.

Of course that didn't include the speaker nor the manual; those went for $200 and $150, respectively.

Too bad the price-cops don't spend their time building some tube gear rather than sticking their nose in other folks business transactions. There is nothing more rewarding than operating a homebrewed rig on the air. I guess that is a lost art amongst most hams these days. (Heehee - I'll be posting my tube list soon; I'll ask prices that will drive the cops' blood pressure through the roof.)

Jeff KH2PZ / 7

P.S. I have to wonder what these folks do when they see too high prices in say, their local radio store. Do they form a picket line outside the store? Do they take out newspaper ads warning prospective shoppers to stay out of that store?

My vote goes to the SX-43 (has Ham-bands) and the SX-62. Both have
full selectivity controls and BFO's. Both used P/P 6V6's in the
outputs.

None of my BA transmitters have BFO's and neither do regen receivers!

Crosley also made a monster console radio that could contend for the ultimate hi-fi BA receiver. The console was nearly six feet tall and weighed on the order of several hundred pounds. It contained multiple chassis - RF, audio amp, power supply. The audio amp was rated at something like 50 watts, and speaker system was composed of woofers, mid-range, and tweeter drivers.

I wish I could remember the model number!

My dear friend and fellow collector:

You are indeed a fellow of good fortune and luck!

I happen to have two prime examples of early
Hallicrafter radios that a serious collector can afford NOT to
have in his collection. The SX-101, by comparision, is a rather
mundane and pedestrian example of the "Hallicrafter Era".

For your consideration, I have the original version of the SX-28
receiver, considered to be the Epitome example
of the Later Period of Art Deco styling..
Remember, a limited production run of only 123,000
sets were ever produced!

(not the gussied up SX-28A nonsense you see all too
often offered by others to less discriminating connoiseurs)

This radio is a <<<Rare Find>>> and is highly
sought after by Discriminating Collectors.
The receiver bears a fine PATINA of age -- the original
owner's nictotine habit is well reflected by the grime covering the
chassis and panels. Carefully stored and allowed to naturally
age in a damp garage in Southern California for
several decades, their is also the desired rusting
of the chassis and front panel Befitting
the age of this artifact. (Yes, it would not be improper
to compare this set to a fine, aged vintage port.)

The SX-42 is a prime example of the Industrial Age
influence; the design of this radio was commissioned
and entrusted to the firm of the famous Industrial
Designer of that era: Raymond Looey,
(Lowey??, whatever....).

In keeping with Tradition, the oft
missing internal cover panel has been *carefully*

removed and discarded, allowing you a clear and unobstructed
viewing of the numerous tubes adorning the large chassis.

We are not offering the companion speaker,
as it is felt that the large size of this unneeded accessory
only detracts from the innane beauty of the SX-42.
As with the SX-28, this radio bears the dirt and grime of
the early Radio Pioneer who originally owned this ***classic***.

My friend, these radios are RARE, and are Museum Quality
(with some work and $$$$ on your part).
It won't be long before they are scoffed up(on)
by knowledgeable collectors or overseas
interests who are all too aware of the investment quality of
this offering.....

I am asking a modest $1999.99 for either radio. While
I would prefer to keep one for my Personal Museum, I will
reluctantly sell the pair for $4351.02.

Please allow an additional $493.29
for airshipping, packaging and handling charges for each
set CONUS to help -- partially -- offset my costs.

For an additional $500.02 consideration, I will
include a copy of the Dachis Hallicrafter book, autographed
by myself.

NOTE TO PRICE COPS: These prices may appear
to be high, but they assure ALL OF US, as fellow collectors,
that the buyer is serious and intends to give these sets
the environment and respect they deserve.

Peter :)

(I must be reading ARC too much.)

"WLW" . . . But I doubt it sounded as good as it looked! I am also skeptical of the 6-foot height. Publicity photos were taken with a rather short young lady standing next to the receiver to make the receiver look bigger. The construction of this set, including the speakers, was quite compromised when compared to the Scott or McMurdo Silver sets. After all, Crosley's motto was "Better for less (cost)" or something of that essence.

Everything Larry has is the rarest of the rare at outrageuos prices.
I guess he does find "stooges" who have more money than they will ever
need, so a few of them "buy" at the astronomical prices.

5652. SX-101A Modification ID Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-23 00:00:00 UTC
From: searay270@juno.com
Message-ID: <882931450.568131598@dejanews.com>
Source record: 112873
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

I just came upon a nice looking SX-101A with two modifications.:

7-pin 6DC6 RF amp replaced with a 9-pin 6EH7 or 6EJ7 mounted in a sunken ceramic socket after surgery. Tube is only a guess based upon my Drake 4-line experience.

7-pin 6C4 added as an amplifier in series with 2nd mixer and notch filter.

Does anyone know if these were common mods, or have any documentation such as from QST, 73, CQ, etc?

Any help or recollection would be appreciated.

Thanks for reading.

Jack W3RU

Flavio:

I have these notes for you and maybe others can comment also:

'i) how to tighten up the nuts for the main switches' - The sub panel comes off with 3 screws on the front panel. Remove the knobs first. Probably have to unbolt the transformer and tube holder bracket also. Really not too hard. Unusual to find these nuts loose...

'ii) where to find the three (7-pin mini, 9-pin mini and octal) low profile
> socket savers? I may have a few used ones. Email me and we can talk..

'I'm afraid of oscillations while testing high-transconductance tubes)' - The TV-7D/U has ferrite beads on every pin of every socket. This should help w/the oscillation probabilities.

'I thought octal sockets were rugged enough for that use' - I have worn them out as easily as the other types. Recommend a socket saver for octal also.

'iii) line adjust rheostat runs too hot' Don't worry too much. In the summer, I can barely touch the panel. Whole unit runs very hot. Does not seem to affect reliability. If you can step it down, it will run cooler. I have more pots of you burn it up next year..

'iv)OK to the 83 rectifier to work in the> horizontal position' After looking at lots of TV-7's, the 83 in this position has never been a problem.

'5Y3GTB?' - Use WGTB (Brown Base)

Well, I dont' know if Dick looks at the boatanchors list frequently but...I had been drooling over the HQ180A he had for years on that shelf in the shop. I had been keeping after him for about two years -- making offers, and such. In '90 he finally agreed to sell me the Hammarlund -- it has been with me ever since -- in mint condition, shiny interior, beautiful dark unscratched front panel -- about as near mint as you can get. I bought the 180A when he was "selling out" many of his old pieces -- so I wonder, indeed, what he has left now. Perhaps there were additional receivers in the attic.

I don't think you can support this thesis with ANY real econ text.
The two functions are independent and of equal importance.

>>-The price is ultimately set by the scarcity & demand
>
>No. Only by demand. The selling, or offered price for any commodity is

>demand for it, its dollar value is Zero.

The asking price has nothing to do with either supply or demand, it is
just the sellers hoped-for first approximation to the intersection of
the supply and demand functions.

>While sometimes pushing the envelope, I think the posts re: ripoff
>prices serve as a valuable reminder to those new to the boatanchor

>Several of the critiques I've read contain useful pricing information
>in addition to flaming the sellers.

Extreme high prices represent, at best, wishful thinking, or, at
worst, gouging of an ignorant market. These are ethical questions,
however, and have very little to do with economics. In the larger
picture those who manage to sell their items for "too much" will be
balanced by those who sell theirs for "too little." Would you also
feel compelled to advise someone that he was selling his item for "too
little?"

>No one's objecting to the so-called free market. But those trying to
>take advantage of the ignorance of others leave themselves wide open
>for printed ridicule and criticism. As happens in everyday life. As it
>should be.

You seem to be defending a free market system, and yet objecting to one of the abuses that it naturally produces. I agree that there are many abuses that we should as a society try to discourage, but that can only be done by putting limits on the freedom of the market. It really makes no difference WHO polices the market; if it is policed then there are policies and these policies form limits on the market freedom.

>Or don't you Guardians of the Republic believe in freedom of
>expression?

A little off topic, but yes.

5669. FS: Complete Heathkit station and accessories

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-24 00:00:00 UTC
From: jangus@netcom.com
Message-ID: <jangusELoFz4.HI@netcom.com>
Source record: 112889

For Sale: Complete Heathkit station.

HW-101 transceiver, HP-23 powersupply, matching speaker.
All original, all with the invoices. I built this as a
kit back in 1976. Very clean, modifications are documented
and done on rear panel. (I.e., no toggle switches in the
front trim etc.) The HW-101 has the optional CW filter.

Known problems with the HW-101. The other night the lever
on the CW-SSB filter switch snapped off. Modifications
include IF loop connections for external equipment, and
connections for RTTY.

Included with the above are several items I've acquired
over the years.

HP-13 12VDC inverter supply for the HW-101.
SB-610 Monitor, RTTY scope
SB-620 Panadaptor
SB-630 Station console, with watt meter, phone patch and clock.

Known problems, missing the IF coils for the Panadaptor. Someone
mounted a toggle switch by drilling a 1/2" hole in the front panel
of the Monitor. And I'm not sure if the 10 minute ID timer is
working correctly with the Console.

All equipment has been tested recently and include manuals. Original
manuals and invoice included with the HW-101, HP-23 and Speaker.

Initial asking price, $750 and will ship anywhere in the continental US.

For info-> Please note !!

A simple substitute for the 3TF7
ballast tube in the R390 series receivers is
as follows:

1: REMOVE the 3TF7
2: MOVE the wire from pin #2 of the socket to pin #4
3: MOVE the wire from pin #7 of the socket to pin #5

plug in EITHER a 12BY7A tube OR
plug in a 12BH7 tube

You will be using the filament only in the tube
you plug in and the voltage and current spec
for either of these tubes is equivalent to
the 3TF7 ballast tube ..

Good article on E.H. Scott custom made radios in Audio written sometime in 1970'S. The story behind the Scott receivers is very interesting. Some Scott models have a b.f.o. which is used to find stations. Earlier models had plug-in coils. Some models had continuously variable i.f. bandwidth. The Philharmonic has a headphone jack. These are the finest radios. The pre-war Hammarlund Super Pros are next. One model came in a wood console cabinet with large speaker. The Hammarlund story is equally interesting. I have an E.H. Scott Philharmonic that I plan on restoring. It has 30 tubes. The audio - power supply chassis has two 5Z3 and four 6L6G tubes. It is capable of 40 watts class A audio. Some say the sound is cleaner since it is before the use of feedback. I worked on SP-600JX-17 in the cold war and they were the best until the Collins R-390'S started to show up. I have an SP-600JX-36 that I got several years ago.

Help.... I purchased a Collins Mechanical Filter for my 75A4. I thought I was buying a 500 cycle filter with a 455 khz if. When I plugged it in, the filter had about 7 or 8 s-units of attenuation. It is clearly not usable. At first I thought I had a bad filter. But after another look at the number of the filter I noted the number may be the key. It is .... F455.7J-05 ... This looks like it for a 455.7 IF. I have never heard of this. Can anyone give me an insight as to what is going on here?

My HQ-180 sounds great on AM. I use it almost daily, paired with a
Johnson Viking 500. The proper alignment of the 50 khz IF (as per the
manual) is important. If you get a double peak after doing this perhaps
some of the fixed components that control the bandpass have changed
value.
Good luck,
Jim, K9RJ
Downers Grove, IL

Agreed, *if* the market has a large number of buyers and sellers.
If the market is dominated by only a few buyers or sellers, then
the roles of supply and demand are distorted. See monopoly
and oligopoly.

>>>-The price is ultimately set by the scarcity & demand
>>
>>No. Only by demand. The selling, or offered price for any commodity is

>can only be done by putting limits on the freedom of the market. It
>really makes no difference WHO polices the market; if it is policed

>then there are policies and these policies form limits on the market
>freedom.

A true free market can only exist when buyers and sellers have
perfect information about the market, IE they know the price and
trading volume history of the commodity being traded. Without this
information, the free market mechanism does not arrive at the
optimum exchange.

That's where the "price police" who post information about market
price history and availability of commodities perform a service (assuming
the information they provide is accurate). In an uncontrolled forum
such as this, false information is quickly challenged, so fairly accurate
information can be obtained if enough people participate. For most of
the items sold here, "blue books" are of very limited value in establishing
a current price history, but they can be useful for reporting commodity
volumes produced, and in some cases, product volume remaining in
the market.

The best form of "price policing" is an open outcry auction. People will
only present price information that they believe is accurate because they
are subject to having to pay that amount if their bid is the highest. If the
bidders form a cross section of the market, this mechanism gives the
true instant value of any commodity offered. (That's why the commodities
exchange and the stock exchange work this way.)

But if the market cross section represented is small, as it typically
is in this forum, significant price distortions can occur unless there
is some form of pro bono "price policing" by members of the group.

> the effects of the departed?
>

That's the executor's job--the market will still decide the final outcome. A simple axiom of economics would infer that an economic balance would occur when both buyer and seller were doing the best that they could do in the transaction everything thing else being equal C.P. if you prefer.

> In either case I agree, it is a matter more of ethics than economics.

> posting at triple that price tends to rectify both problems.
>

Ecocnomics usually does not entertain the concept of greed--just self interest. I really doubt of many buyers on our newsgroups or listservers are out to do much in the way of altruistic deeds. But I would not call any of them greedy--just filling a need. Seller wants to get as much as he/she can and buyer wants it for free. Amazing system we have. If a person gets on the net selling 6146 tubes for 75 bux a pop and there is a movement by a lot of folks to buy them at that price, then there will probably be a lot of folks out their digging up back yard to find their 6146 stash and perhaps offer to sell em' for a tad less to be competitive.. then the system is off and running again. Would you sell your Tung Sol 6550 tubes to a fellow for his CE100V for 15 dollars each, or would you sell them to the audio dudes for $75 each?

> >You seem to be defending a free market system, and yet objecting to

5698. Re: 1998 San Antonio Swap Meet, Corrected Directions

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-25 00:00:00 UTC
From: ki5sl@hotmail.com
Message-ID: <34a6fd01.91994031@news.texas.net>
Source record: 112669

The San Antonio Radio Club is presenting it's 1998 Swapfest on January 10, 1998.

It will be held at the "Country Gold" dance hall at 7405 Old Pearsall Road. Old Pearsall Road is west of IH35 south of San Antonio off of Loop 410. Exit onto Loop 410 from IH35 south of San Antonio and go west on 410.

Take the Pearsall Road exit and go left approximately 1.7 miles to "Country Gold."

Preregistration Prices:

Tables $5.00
Admission: $2.00

At the Door:

Tables: $6.00
Admission: $3.00

Setup begins at 7:00 AM, doors open to the public at 8:00 AM.

There will be hourly door prizes, Preregistration and Grand Prizes given away at the fest...

PREREGISTRATION MUST BE RECEIVED BY JANUARY 3, 1998.

To Preregister, send name, call sign, number of tables, number of admissions (these are seperate from tables), and a check to:

San Antonio Radio Cluyb
P.O. Box 34253
San Antonio, Texas 78265-4263

For more info, e-mail swapfest98@juno.com or call Royce (KA5OHJ) at 210-680-0432

Thanks and hope to see you there!

Rick, KI5SL

I am looking for some information on how to build a keying circuit to use the audio output of one radio to key another radio and retransmit the audio. Sort of like a cross band radio does only I am going to use two diffrent radio. Spacifically I am using an HTX-202 for the reciever and an HTX-404 as the transmiter.

Any information you might have would be helpful. Please E-Mail them to brad@dialnet.net

Thank You.

Brad,

ONLY $18K? There ares several floating around out there with $25K plus asking prices. Makes $18K seem like a bargain :-)

Oh, well ... when a little Knight Ocean Hopper sells for over $300, as one did in the last few days on eBay, or an S-38E for $150, what can anybody expect anymore ... It was pretty funny, some other joker trying to sell an S-38 on eBay later on used THAT one to try to convince people his was also a rare vintage antique worth a bundle :-) The market has clearly gotten a bit out of whack ...

Regards .. Grant/NQ5T

5710. Re: Silly Economics vs. Romanticism

Newsgroup: rec.radio.amateur.boatanchors

HI Jim,
I agree with you 100 percent on the disposition of our precious amateur resources. I was trying to play the devil's advocate re the application of economic theory to a venue that is
ruled in many cases by intense romanticism. And since Ham radio has been very good to me, that
is to say in the early days of my ham career my mentors were very generous with their excess
toys and rarely charged a dime for anything regardless of their original costs. No economic engines running here. I for one would rather just give the crap away rather than sell it cheap. Like yourself, I've given a lot of stuff away over the years and of late I have sold off
a lot of my crap too to cover the costs of my hobby--although I will probably never reach any
point of economic equalibrium C.P.
But I guess if some bloke sees his toy is worth a king's randsome (sp) then that is his problem and not mine.
Re CE100vs, I recently mailed out for the price of an SASE a score of size D copies to fellow hams. I have collected three of these rascals and love 'em.
I have sold some of my collins stuff at market prices and I think everyone was happy with the deals..have yet to be roasted...but I',m sure my day will come as Ron Merrell found out (I
have also dealt with Ron and found him to be a very nice and understanding person who just likes
to putter and trade and so on with the hobby).
So I really do not think we are far apart on the romantic side of our hobby. But somewhere along the line economics will decide the final fate of our toys as gravity gets us all in the
end and the HRO-500 and the 312B5s ultimately end up in the land fills. But in the mean time,
let's have some fun and if some of the guys push the envelope in the self interest department,
the net will (it seems) correct any deviation from what is right vs. economic theories...C.P.

Have a nice holiday es 73 to all

The R4B and R4C are both excellent receivers, with the later C version being one of the best you can find of its generation. They show up fairly often in this newsgroup as well as rec.radio.swap. You might also keep an eye on rec.radio.amateur.equipment. A bunch of folks don't know any better and a lot of wanted/for sale stuff gets posted there, too.

Good luck. I am sure you will enjoy either of these two nice receivers.

HI Jim,
I agree with you 100 percent on the disposition of our precious amateur resources. I was trying to play the devil's advocate re the application of economic theory to a venue that is
ruled in many cases by intense romanticism. And since Ham radio has been very good to me, that
is to say in the early days of my ham career my mentors were very generous with their excess
toys and rarely charged a dime for anything regardless of their original costs. No economic engines running here. I for one would rather just give the crap away rather than sell it cheap. Like yourself, I've given a lot of stuff away over the years and of late I have sold off
a lot of my crap too to cover the costs of my hobby--although I will probably never reach any
point of economic equalibrium C.P.
But I guess if some bloke sees his toy is worth a king's randsome (sp) then that is his problem and not mine.
Re CE100vs, I recently mailed out for the price of an SASE a score of size D copies to fellow hams. I have collected three of these rascals and love 'em.
I have sold some of my collins stuff at market prices and I think everyone was happy with the deals..have yet to be roasted...but I',m sure my day will come as Ron Merrell found out (I
have also dealt with Ron and found him to be a very nice and understanding person who just likes
to putter and trade and so on with the hobby).
So I really do not think we are far apart on the romantic side of our hobby. But somewhere along the line economics will decide the final fate of our toys as gravity gets us all in the
end and the HRO-500 and the 312B5s ultimately end up in the land fills. But in the mean time,
let's have some fun and if some of the guys push the envelope in the self interest department,
the net will (it seems) correct any deviation from what is right vs. economic theories...C.P.

Have a nice holiday es 73 to all

I agree, both 4B and 4C are pretty good. But they are starting to get scarce - the reasons are:

(1) Performance is really good compared with new rigs. My R4B can keep up with the Kenwad TS-50s sitting next ot it. CW reception on both is excellent.

(2) Even though 30 years old they are still easy to fix - R4B uses common tubes - TS-50s uses custom IC's that say "Kenwad" on them. Do you think they will be hard to find in 30 years ???

(3) Very compact in size. Most BA's take up a lot of room. Drake BA's have got to be the smallest size rigs around. XYL's think they are " cute "... ??!!??!!

(4) Halli, National, Hammarlund, Globe and Collins are all gone... DRAKE is still here and -YES- they will fix their own rigs! Parts are still available for most models.

An R4B or C with a homebuilt 6L6 will keep you happy in CW land for a long time!

Good Luck!

Mark,

If your sighting was weeks ago, then the stuff may not be gone.
On Saturday, 20 DEC 97, the ceiling shelfs and a few other places,
still had lots of BAs (none appeared gone), all had price tags,
none were marked sold, and a quick chat with Dick indicated there
were still BAs available. The question will be if they plan to
open to the public on Saturday the 27th, or anytime?

Tube line up is different. Both are Triple Conversion Receivers. R4/c has a solid state audio section driving the audio output tube. R4/c has a different scheme for noise blanking with the pug in board. Several changes were made in the C line production so not all C lines have the same tube line ups.

Message-ID: <34A3409F.AA0E3AB5@homestead.org>
Source record: 112698
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have an old Lafayette HA-460 6 meter AM tube rig for sale. This model used to be used for 6M mobile AM in the 1960s. It needs new tubes, and a checkup, but is in extremely clean condition. It could probably be made to work by someone with a little time to spend on it. I think the power out is something like 20W or so. Great for a boatanchor collector or someone interested in 50MHz operation (here come the sunspots!).

$50 or best offer, plus shipping (weight about 15lbs or so, I'd guess)

Thanks,

Basil Darin Arrick, KB5KHR

The Drake R4B and R4C are both very, very capable receivers. If you can find either unit in excellent physical and electrical condition and at a good price, buy them.

First of all....both receivers, as they come out of the box, cover 80-10 meters. No WARC. However, both receivers are capable of covering the entire range of 1.5 to 30 Mhz using accessory crystals. The R4B has the capability of 10 additional 500 Khz bands. The R4C can cover 15 additional 500 Khz bands.

The stock R4B includes bandwidth selectivity of .4, 1.2, 2.4, and 4.8 Khz. The stock R4C includes the SSB selectivity of 2.4 Khz. AM and CW selectivity options are enabled via filters that plug into the back chassis and or inside the receiver for later S/N units.

The R4B has xtal calibrator as stock. The R4C xtal calibrator was an option (though most R4Cs I have seen have them).
The R4B has noise blanker as stock. The R4C noise blanker (4-NB) was an option. This noise blanker is very effective you should hope to get an R4C with this included.

Both have effective IF notch and PBT.

The R4B has a copper clad chassis, the R4C is steel.

I own several of the R4Bs and R4Cs. From my subjective/objective opinion, both receivers are very close in performance with the slight edge going to the R4C. Both have excellent sensitivity, selectivity, AGC and audio. Use with companion transmitters is easy with the ability to zero beat the two PTOs a little easier with the "C" line.

As collectibles....the R4B is a little more desirable.

BTW....the R4A is also a very capable receiver, most similar to the R4B --- don't exclude the R4A from your list.

If you need more specific info or questions, please contact me.

Source record: 112705

The R4B and its predecessors are, I believe, dual conversion designs using a premixer system to get the correct first LO frequency. The first IF is at 5645 kHz, and there is an 8 kHz wide crystal filter at that frequency. The second IF is at 50 kHz. Selectivity is obtained by LC circuits in the 50 kHz IF, and is variable from 400 Hz to at least 2.4 kHz (it may go even wider, I'm not sure). The passband tuning is mechanically derived. There is a noise limiter built in, but it's a limiter, not a true noise blanker. There is a notch filter in the 50 kHz IF which is very useful. The design is almost all tubes, but they are fairly common types.

The R4C is a triple conversion design using a premixer and first IF system very similar to the R4B. The first IF is still 5645 kHz, and there is still an 8 kHz filter at that frequency. The next part of the receiver is somewhat confusing, but I'll try to make it understandable. If the mode switch is set to SSB or CW, the 5645 kHz first IF is converted to 5695 kHz, where it is passed through another crystal filter, which sets the overall receiver selectivity. If the mode switch is in the AM position, the mixer which converts 5645 to 5695 is converted to an amplifier, and the signal is passed through an AM width crystal filter at 5695. Finally the 5695 or 5645 kHz signal is converted to 50 kHz, and then detected. There is a notch filter in the 50 kHz IF, and the passband tuning is now electrical, rather than mechanical. (That's why all the conversions). There is also an optional noise blanker (model 4NB) which plugs in, and is very effective. The design is hybrid, using both tubes and discrete transistors. All of the oscillators, the audio and detector stages, and the second mixer are transistorized. There are only 6 tubes in the receiver - two 6HS6, two 6BZ6, and two 6BA6. The dial and front panel are somewhat different from the preceding models. The R4C has four crystal filter positions: AM, SSB, CW1, and CW2. The stock R4C was supplied with only the 2.4 kHz SSB filter. Drake made optional filters for bandwidths of 4.0 kHz (AM), 1.5 kHz (RTTY/sharp SSB), 500 Hz (normal CW) and 250 Hz (sharp CW). Other aftermarket suppliers (Fox Tango, Sherwood, and International Radio) made/make compatible filters for these and other bandwidths, but you're limited by the number of socket positions available. The R4C is transceive compatible with both the matching T4XC transmitter and the earlier T4XB. For more details, see the review in QST for January, 1974.

Both models have auxiliary crystal positions which make it possible to receive the WARC bands, WWV, etc., if you buy the right crystals.

The reason for giving all this detail is that your decision of which rx to buy has several factors to be considered. First, both of these receivers are really first class. The R4B has more tubes, but is probably easier to service because of them. The R4C has better selectivity (the crystal filters have better shape factor than the 50 kHz LC circuits) but you may have to buy the filters at 100-125 bucks each. The 4NB may be very hard to find if the rx you buy doesn't

already have it installed.

Hope this helps!

= = = =

rig Operators Club"s. Procedures will be as outlined in
"PROCEDURES - 19 SET GROUP - CW NET (ver 2.2, 11 Sep 97)".
Additional details are as follows:
Time/Freq: 0500-0530Z on 7005 KHz
0530-0600Z on 3705 KHz
Net Control: VA3ORP (Dave, 20 Km NE of Kingston)
Mode: A1 (CW) at 12 WPM
North American stations will be called in beginning at
0445Z. Trans-Atlantic work to start at 0500Z. Net Control
Station will be using modern equipment with 100 watts and
both vertical and horizontal antennae available. NOTE: THIS
IS A DIRECTED NET! Participating station to be on time and
on frequency. Priority will be given to 19 Sets as the
objective of this sked is to complete a trans-atlantic 19
Set/19 Set QSO. Propagation should be good for the 13th and
27th but is forecast to be very noisy on the 20th.

b. 17 Dec - There will be a small display of vintage
computers at the Military Communications and
Electronics Museum. This is in conjunction with a
commercial display. Hard to think of 20 year old gear
as being vintage! (do you remember CP/M? - it was BD;
that is - Before DOS)

5. Members' Activities

a. VA3ORP/VE3RCS. The 19 Set in the Museum is now
operational and available for use on Thursdays. The
Thursday sked amongst VE3RCS, VE3RIH & VE3FYR has been
named the "Old Sweats Net". Any military folks are welcome
to drop in at 1000 EST, 3760 KHz (alternate 7060 KHz). Some
additional information was found concerning the
"Alexanderson Alternator" (see the HMCS Haida web page link below)

b. VE3ORP. Waiting for the fleamarket season to start up
again. Some old gear is showing up on Sunday Night Swap Net
(details of an AR-88 passed to WF2U). Had some details
concerning a REALLY BIG antenna problem (Omega antenna in
Hawaii).

c. VE3DPC. Frank has a Command Set (both tx & rx) in good
condition but needs some tubes for the receiver.

d. VE3RIH. Alan continues to do a lot of operating with
his 19 Set. Claims to be the only "authentic" set on the
air as he runs off of battery and dynamotor! (bet his
sulfuric acid isn't 50 years old!) Alan is available for
all three trans-Atlantic skeds.

e. VE3CBK. Chris is available for all three trans-Atlantic skeds.

f. VE3FYR. Enjoys listening to the comments about the
vintage sets. The closest Fred actually got to military

radios was the PTT switch in a Hurricane fighter during WWII.

g. VE3POS. Relayed the story of his first purchase of a 19 Set from Hercules Sales in Toronto for $48 (THAT was some time ago!)

h. W1NU. Vic gave a run down on the modifications that he has done to his 19 Set over the years. He checked his log book and confirmed that he has been using that set since 1947 when he bought it, in new condition, for $1.00. Vic is available for all three trans-Atlantic skeds. (LATE ENTRY: On 8 Dec 97, Vic worked a station in Denmark on 80 M using his 19 Set! Well done Vic).

i. VE3NKK. Dave needs some info on the W.S. No. 29 "B Set". VA3ORP will check the Museum archive.

j. WF2U. Meir got another 19 Set in very good condition and with most of the accessories. He will try to have it on the air for the 8 Dec 97 CW Net (how much was the shipping from British Columbia?) Still looking for information on the RCAF AT-12 (will send photo to VA3ORP).

k. VE3CFY. Greetings from Bill. Glad to hear you on the CW net from time-to-time.

l. VE3AZA. Had some interesting comments about using a spark transmitter at King Edward Collegiate (Vancouver?) in 1939. May check-in to the CW net with one of his 6L6 home brew transmitters.

k. VE3FKQ. Hopes to get to the Museum for a tour of the back room. Maybe Frank can help identify some of the foreign military sets.

6. Ongoing Projects:

a. 19 Set Web Page. This just keeps getting better! Great work by VE3BDB - Bob. Lots of check-ins from all over the world. Some "Wants" and "For Sale" items listed.

b. CW Net. Going well and the training seems to be paying off. Participants are asked to use their dummy load for frequency spotting or, better yet, zero beat using the proper procedure! (set to "R/T", "Net" switch ON, adjust for zero beat, return to "W/T"). As propagation changes it may be necessary to move to the "blue" frequency (7033 KHz).

ADJOURNMENT

7. The net adjourned at 2157Z. QRX Sunday, 4th January 1998 at 2000Z on 3760 KHz (alternate frequency 7060 KHz).

73 es cul de Dave, VA3ORP@VE3CDY.#EON.ON.CAN.NA
(EMail va3orp@kos.net)

...chirp chirp

Monthly 19 Set Net

Join us on regular lower sideband at 2000Z on 3760 KHz (+/-) on the first Sunday of each
month to chat about 19s and other older military radio gear. Control station: VA3ORP

Weekly 19 Set Net

Each Monday night, 2330Z (1930 EDST) on 3703 KHz, CW operation. Fun stuff. You don't
need a 19 Set to participate but you may hear the distinctive "warbling chirp". Note: this a
directed net and the control station directs ALL activity; CW speed is to be kept at 10
WPM with correct spacing; if using a 19 Set, please re-tune often in order to stay on
frequency (digital receiver for side tone and frequency control essential). Control station
VA3ORP.

Watch Amateur Radio Packet for messages to "19_Set" after each monthly net!

Events Involving 19 Sets

Sep 4-7, 98 (repeat 1998) - Reunion 98 at CFB Kingston, Ont.

If you know of any events featuring the 19, please let us know!

: had about 7 or 8 s-units of attenuation. It is clearly not usable. At first
: I thought I had a bad filter. But after another look at the number of the
: filter I noted the number may be the key. It is .... F455.7J-05 ...
: This looks like it for a 455.7 IF. I have never heard of this. Can anyone
: give me an insight as to what is going on here?

Don't know if that's the right filter - perhaps a 75A4 owner can answer
that. But Collins made a few CW filters a little off the center freq
of the radio. Those I see in the '71 filter catalog include the F455.4Y-03
and F501V-05F. I would guess these are mainly for receivers with
separate LSB and USB filters, and a xtal controlled BFO of 455.0 or 500.0
kHz. With a fixed BFO, you need a filter a little removed from
the BFO freq - thus your F455.7J-05 filter would be 500 Hz wide, centered
700 Hz away from the 455.0 kHz BFO, if I can take the filter type
number as being an accurate description, usually, but not always
accurate. The filter should be close enough to the 455 kHz IF of the
receiver to work if the filter is not defective, and if it's the
correct impedance level and expects the size of resonating capacitors
provided by the reciever.

I have both the R-4B and R-4C. The R-4B can usually be bought for less money and has a noise blanker and multiple selectivity built in. The R4-C is usually sold stripped and the filters and noise blanker bring fairly high prices if you can find them. I personally prefer the R4-B's audio over the R-4C. I enjoy using both and really couldn't say that one is better than the other. You won't be dissapointed in either receiver.

>Can anyone tell me the difference between the Drake R-4B and
>R4-C....
>Craig/AA3MD

The biggest difference is that the R4, R4A,
and R4B employ built-in L/C filters, like the R8 series.

The R4C uses optional, plug-in, 6 and 8 pole crystal filters
for the various IF bandwidths, like the R7 and R7A.

You can fit an R4C with steep sided, aftermarket
filters (e.g., Sherwood) if you can still find them.

The noise blanker (and I think the crystal calibrator) are
extra cost options on the R4C but are built into earlier models.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for High End computer EQ. will be considered. All working last time tested unless noted.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $250

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $225.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $250.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$125

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $150

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - As new. Purchased 4-5 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz. $150+ shipping.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volums, some continous: numbers as follow: Continous 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $5 each.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $100

• Craig- 6" Reel to Reel Stereo Tape Recorder. $50

Have I missed something here Bry?
I remember making several transatlantic QSOs on 40m CW in the early 70s
using a 19 set and a piece of wire tied to a brick thrown out of a two

story window to the grass below. (The brick not the 19 set!!!)
I am sure I am not the only one to have done this.
Seasons greetings!

Consider this to be a "complaint" and raise the price another $50. By
the way, I have an SX101A, HT32A, and HT33B that I would be willing to
part with for a "fair" price if anyone is interested. The $500 for
the 101A would go a long way to getting all three of mine.

gjw@efn.org (George Worthington) writes:

[In reference to my posting re: HW-101 station for sale]

>Must be another troll!

>>For Sale: Complete Heathkit station.

>>HW-101 transceiver, HP-23 powersupply, matching speaker.
>>All original, all with the invoices. I built this as a
>>kit back in 1976. Very clean, modifications are documented
>>and done on rear panel. (I.e., no toggle switches in the
>>front trim etc.) The HW-101 has the optional CW filter.

Laugh if you wish gentlemen, but the station package has been sold.
Perhaps a bit less than my earlier posting, but not for the $75
that the price cops would have you think that it's worth.

Consider this, everything in that package has been tested and
is either fully functional, or was noted as to condition. How
many times have you bought something at the swap meet to find a
part missing or a function not working?

To the buyer, thank you, and I hope you get as much enjoyment
out of the station as I have over the past 20 years.

73 es GM from Jeff (not a troll).

FTV is a software only package that can be used to receive images from
Weather
Satellites and Terrestrial Facsimile Stations, text transmissions from radio
telex services, Morse code, as well as Amateur Radio FAX, SSTV, RTTY and CW
signals. It can also transmit Amateur Radio FAX and SSTV. No external
hardware, other than a radio, is required, as all the necessary signal
processing is implemented in software.

The main features include:
WEFAX, FAX, SSTV, colour SSTV, RTTY and CW operation.
Transmits 6 FAX modes, 8 monochrome SSTV modes, 10 colour SSTV modes.
FAX operation supports APT signal recognition and scheduled reception.
No external decoder or converter box is required.
Signal analysis is provided on all modes.
Many parameters are adjustable while receiving.
Full recovery from wrong mode settings is possible.
Program works in real time (about 1 second 'DSP' time lag)

I have improved documentation considerably and an illustrated user's manual
is now
available. You may get more information or download a copy from my web site,
on http://www.geocities.com/SiliconValley/2504

5757. People's Court - W0OIZ vs. KG6UC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-26 00:00:00 UTC
From: 3W8PE1B <willi6@erols.com>
Message-ID: <34A43E27.2BD5@erols.com>
Source record: 112728
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Having watched People's Court yesterday,
I can't help but think that Judge Ed Koch
would love this case......

Rather than a lot of posting and counter posting,
suggest anyone who is interested do a complete
review of the facts (USENET search back to 11/24),
throw out the extraneous stuff, print out hardcopies,
make some notes, use a highlighter if needed, and
see what evolves. Consider only the hard facts
and the timing of posts.

And then, just think about it.
Don't post your Jury Vote!

Only Ron and Jeff know what transpired during the
E-Mail exchanges, and in particular, during the
two critical phone calls. Thus, only they will
know what action or inaction triggered any NG
activity subsequent to 15 DEC 97.

Remember, resist the urge to post the verdict
of the People's Court - it will accomplish naught!

Case dismissed.

[Whack! Sound of Gavel striking bench.]

Regards,

Dave K7HMP

Subject: FS: 12BY7/12DQ7 & Other Pentodes-Updated List

I have a number of rf and other small pentodes for sale. Here's the
list:

(2) 6F6GT Tung-Sol $8.00 ea.
(1) 6F6 Hytron (metal) $4.50
(2) 6K6GT Sylvania $4.00
(16) NOS 12BY7A (RCA, GE, etc.) $6.00 ea.
(10) Used, tested 12BY7A, $3.00 ea.

(2) 6CM6 Sylvania (min. version of a 6V6) $3.00 ea.
(2) 6AR5 $4.00 ea.
(6) 6AU6 $2.00 ea.
(12) 6BH6 $1.50 ea.
(1) 6JC6A $2.00
(2) 6DL5 $2.50 ea.
(4) 6AK5 $2.00 ea.
(1) 6BZ6 $1.50
(3) 6CL6 $2.00 ea.
(4) 6CF6 $2.50 ea.
(1) 6AC7 (2) 12SK7
$2.00 ea.
(8) 6AG5 (1) 12AF6
(1) 6BA6 (3) 12BA6
(2) 6BC5 (6) 12BD6
(6) 6BJ6 (2) 12BL6
(3) 6CY5 $2.00 ea. (3) 12DT5
(3) 6DC6 $3.00 ea. (3) 12ED5
(4) 6DE4 (1) 12EK6
$2.00
(2) 6DT6 (1) 12AB5
(2) 6HR6 $3.00 ea. (3) 12CA5
(3) 6SG7 (4) 12C5
(7) 6SH7 (3) 12DB5
(4) 6SK7 (1) 12FX5
(1) 6SJ7GT $4.00
(2) 6SJ7
(2) 6SC7 $2.00 ea.
(2) 6AK6
(2) 6AS5
(3) 6BF5
(1) 6CA5
(3) 6CZ5 $3.00 ea.
(1) 6DT5

(1) 6DW5 $2.00 ea.
(1) 6FW5
(1) 6GC5
(4) 6DE6
(5) 6AH6
(3) 6BD6
(5) 6CU5
(2) 6EH5

Tubes listed above without a price are $1.25 ea. or 10 for $10.00. The prices listed are even better in most cases than the AES sale flyer!
Shipping is additional (usually $3.00 for Priority Mail). Please e-mail me if interested. Thanks.

Hi,
I have the following equipment for sale (to USA, lower 48 buyers)
since I am unable to locate a shipper willing to ship to Korea or Japan
and still insure the equipment for full value. If you are an
overseas buyer, and have a suggestion on shipping to your
country, please let me know! We may be able to work something out.

Collins S3 line: 75S3,32S3,516F2,312B4,CP1,D104,MANUALS,200HZ and
std 2.1Khz filters, all items CCA good to excellent.
$1300, you pay shipping. Advertised last week, lots
of tire kickers, struck a deal but the guy fell short
of money so the station is back for sale. Several
overseas buyers were interested but have thus far been
unable to find a shipper willing to send to Korea,
Japan, etc.

Collins S1 Line: 75S1,32S1,516F2,copy of manuals. All items CCA good
or better. $750, you pay shipping.

Collins KWM2: no power supply, just a working condition CCA good
KWM2. $380, you pay shipping.

Drake 2B: communications receiver, including 2A speaker.
and copy of manual. $195, you pay shipping.

Kenwood TS50S: 100W mobile HF rig, 160 thru 10M,
SSB,CW,FM,AM, etc. includes manual, hand mic, power cord,
box, bracket,
etc. Very good condition. $645 and I pay shipping CONUS.

Ten Tec TRITON IVD: Triton 4 digital HF rig, 100W out, 80 thru 10M,
SSB/CW. Includes CW filter (model 245) as well
as noise blanker. Also includes matching 252M
20A 13.8V power supply with OVP-2. Very good
condition, though front panel shows slight wear in
a few places. $450, and I pay shipping CONUS.

VHF/UHF
========
Alinco DR110: 2M radio,45W RX cellular too. with Mic, manual. $188
KDK FM-240: 2M radio, 25W output. with mic and manual. $148
KDK FM-2015R: 2M radio, 15W output. with mic and manual. $109
Yaesu FT-2700R: 2M/440 25W. with box, manual, mic, etc. $225
Kenwd TW-4000A: 2M/440 25W. with mic. $195
Kenwood TH-75A: 2M/440 5W HT. box,manual,2 nicads,case,chgr,ant $225

Kenwood TR-2600: 2M, 3W HT. 2 nicads,case,chgr,ant, $155
Mirage 2M amp B-23. 2in, 30out. max 5W input. $49

All gear is in the USA, shipped from zip 46106. Please email if interested, or send me your phone number so we can work out a deal. Trying to buy a house, so selling most of my ham gear.

thank you,
Joe

My son in law gave me as a gag Christmas present a code practice set. It is on an inch thick hunk of chipboard and has a very cheap Japanese straight key. Behind the key is the oscillator. It is in a black bakelite box like a smaller Triplett or Simpson meter about 6X3X2.5 inches. The top cover has a grill for a 3" speaker and two terminals. It is marked, Hallicrafters HA-18. Looking at the internals, I am surprised that Hallicrafters put their name on this little jewel. >From the parts, I would judge that this was made in the early 1960's. There is a TO-3 power transistor, A TO-5 transistor a couple of resistors, one ceramic cap but the real thrill is the emitter resistor which has no cover and has been adjusted by shorting most of the turns with solder.

Was this thing a give-away? If anyone can identify it, please let me know preferably by mail. Thanks very much.

Best regards,

Art Borg

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment.

Brands such as Neumann, AKG, Telefunken, UREI, Universal Audio, Teletronix, Altec, Gates etc.

Especially interested in anything by Langevin and RCA.

Looking for Turner model 77 and 87 microphones, Sennheiser model 409 mics

The older the better, and basket cases are always welcome.

Thanks in advance.

This was a nice little code practice oscillator sold by Hallicrafters in
the late 60's for about $10. Probably something of a collector's item,
although I don't think you could retire on the proceeds :-)

I use to have a Command receiver at one time. I don't know what became of it. I use to call it my general coverage receiver because it seemed to never stop drifting. You just turn it on and wait for it to drift to the band you wanted.

I think I only paid $5 for it at a hamfest, but it was the best $5 I ever spent on a radio. It seemed that years ago no hamfest was complete without 20 to 30 of these units showing up for sale. But in those days everyone wanted a computer instead.

I often look at items at todays hamfest and wonder what will be worth a lot in the future that I am passing up now.

FS KW Electronics Vespa transmitter. SSB, AM, CW. With matching power supply. Sometimes called poor mans S Line, looks a bit like S line gear, and is same color. Great little rig to use with boat anchor receivers. Has had 6DQ6 changed to 6146B. (which I think is an improvement) Overall 7 - 7 1/2. Use mechanical filters in sideband circuit. $125.00 plus shipping (40 pounds with matching outboard power supply)

Steve,

Good post! I sold my mint SX-101A MkIII for $175 about 2 years ago.
I wasn't too impressed with it, and thought the SX-115 was quite a bit
better in performance. Now a mint SX-115 would worth that $500 price tag
IMHO!

Happy holidays/73,
Bob, K3AC

I'm forwarding this from The Boatanchors email list // Jeff KH2PZ/7

---------- Forwarded message ----------
Date: Sat, 27 Dec 1997 12:42:06 -0500
From: "Christopher A. Bowne"
To: Old Tube Radios <boatanchors@theporch.com>
Subject: Electric Radio 160 Meter AM Jamboree Tonight!

Just a reminder that the subject event starts tonight (Saturday night) at midnight EST/2100 PST, and runs for the next 24 hours. A friendly get together on AM on the top band, with points given for those who like to keep score.

Exchange signal reports, name, QTH, tx/rx/ant, and AMI number (if applicable, not a prerequsite to participate!)

1 point per QSO, plus 1 bonus point per QSO with an AMI member.

Competition logs to be submitted to ER NLT 30 January 1998.

I believe that this operating event is being called the N2KSZ Memorial QSO Party, in memory of Dave Smith, of Dekalb Junction, NY, who won last year, before his untimely death a few months later in a farm machinery accident. Dave was a great 160 meter operator, and always enjoyed operating in this event in past years.

I have to confess that I misread the contest announcement in Barry's December ER editorial, and thought it started LAST night at midnight. I was wondering where everyone was (I blamed rotten QRN) until KW1I set me straight on the schedule this morning on the Old Military Radio Net ! With the east coast storm heading north and out to sea, QRN should be better tonight.

73 es CU tonight with the roaring T-195 and the brave little TCS! Don't forget to tune toward the top of the band to catch those guys with miliary rigs like the ART-13 which can only squeak down 30 kc or so into the band.

Season's Greetings To All

Chris Bowne, AJ1G
Stonington, CT

5799. WTB: Ameco TX-86, and a 12BZ6

Newsgroup: rec.radio.amateur.boatanchors

One is available from a local widow, who needs the cash, and who would have to pack it. Dunno what coils are now in it, but there are two spares -presumably one set will do 455.

An offer I could pass to her? Original Manual, too. Cosmentically pretty good and will clean up OK, but is presently in filthy/dusty barn attic.

Source record: 112653
Cross-posted to: rec.antiques.radio+phono,rec.audio.tubes,rec.radio.amateur.boatanchors

I just finished cleaning up my radio links page, at:
http://www.geocities.com/CapeCanaveral/9178/linkrad.html -or-
http://www.netcom.com/~wa2ise/radios/linkrad.html
(both identical).

Removed the bad links (error 404's and such) and updated changed URL's.
There are some duplicate links, though.

Links to antique radios, tube sites, and boatanchors (old heavy ham radios).

What pentagrid converter tubes are in current production today, for production use? I don't want to build a new design based around something that is going to disappear.

I assume that the venerable 6BE6 is still in plentiful supply, but is it still being made? Even so, I'd still like something with considerably greater AGC range for the application.

Jeff or Jaqueline or whoever you are:

It was pretty clear to everyone that your were merely
trolling with the silly price cops postings. What you still
don't seem to get is why many of us find it offensive.
Here are a few clues:

- we really care about amateur radio and think our
reputation as a group is important

- people who take advantage of newcomers by ripping
them off with outrageous prices turn new amateurs off
and give us all a bad reputation

- people who 'collect' older gear, never use it and drive
up the prices will prevent some of us from even owning certain
radios at all.

Why don't you stop wasting bandwidth with this kind of
post and add something more constructive to the discussion

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

REVIEW: R-390/URR - R-390A/URR Handbook, Paolo Viappiana, Editrice Il Rostro

Okay - what am I doing writing a review in English of a book written in Italian? To make matters worse I don't have much knowledge of the language either!

Well, first of all I would like to state that there is enough information taken from the various US Army TM11s, charts, diagrams and figures that know no linguistic boundaries to make the Handbook worthwhile to someone who does not have access to the official documentation. Of course, some degree of familiarity with the language would be a great asset here or a friend who can help.

The fact that a writer in Italy chose to write a book about a forty year-old US military and government radio receiver really intrigued me but it only backs up the claim that these radios are extremely good for listening to the portion of the spectrum they cover - 500 KHz to 32.000 MHz, AM and CW. Add-ons and circuit modifications will also make SSB signals intelligible but since most shortwave broadcasts are AM the receiver is popular among serious hobbyists who like to tinker with their equipment.

The Handbook contains 20 Capitolos (Chapters) and covers a lot of ground; ie: technical data, modifications, history, trivia, statistics, lore and legend about this receiver. Paolo's work covers "la famiglia 390" which includes the R-389, R-390, R-390A, R-391 and R-392 and the differences between them, particularly the R-390, R-390A R-725 and R-1247. It is very convenient to have block diagrams and tube lists of both receivers in one book if you are interested in both models. One of the things it conveys very nicely is that the R_390 and R-390A receivers are VERY different. Paolo has included a detailed chart of contract numbers, contractors, years of manufacture and estimates how many were made in each contract. I am curious how accurate those production figures are, since Tom Marcotte, compiler of the on-line list has not publically speculated in the numbers, at least that I have seen.

As far as illustrations go, Paolo has borrowed liberally from the TMs and these are, of course, in English. There are mention of some of the officially modified models, such as with LSB and SSB, Diode Load output on the front panel and a whole chapter that lists the TM11s and NAVSHIPS manuals for all models and some sources for them. Also included is mention of the Boatanchors List on theporch.com and how to subscribe. There is a ten page bibliography or articles, mostly in English, with familiar and knowledgeable names like Kleronomos, Rippel, Langford that is extremely valuable and this compilation alone is well worth the

price of the book.

I looked in the mods and did not see the very important C-553 mod to change the notorious Vitamin Q plate blocking capacitor on the plate of V501 (1st IF amplifier) to a .01/600V Sprague "Orange Drop" - cheap insurance on your four Collins mechanical filters recommended by Chuck Rippel. In fairness to the author it may be in there somewhere and my ignorance of his language must be forgiven if this is the case.

The book is available directly from the publisher - write them at: Editrice Il Rostro di Patrizio Giovene & C., 20155 Milano, Via Monte Generoso 8 Italy, or Fax: 02-2133869. They will mail you a copy, enclosing an invoice for 35.000 Italian Lire which is about $25.00 US. You must pay in Lire and can get from a bank or currency exchange.

I am hoping that the book will be translated into English one day. However, in my opinion THE R-390/URR HANDBOOK contains enough useful information that it is worth getting if no other detailed sources are available.

Ho4bart wrote:

><snip>
> --where are these newcomers who are being ripped off?

Perhaps there are none- but who else would pay 4 times the average price for a (not very rare or hard to find) item? Even if the collective actions
of price cops never succeded to inform a single novice, or worse yet, even
if their actions were motivated simply by a self-serving desire to lower prices (as some like to believe), their actions are more justified than the person who advocates their suppression. Irregardless, it can hardly be
construed as an attempt to manipulate market forces when people call attention to a price that is truly an isolated extreme. Do you really think any of the people complaining really had any hope of actually obtaining that specific radio- that their complaints would cause the seller to lower his price to one they found reasonable (from $500 down to $125!)? Do you think they feared the sale of this one radio (priced far higher than any other ever posted on rec.radio*) would drive up the market value? Where were
these self-serving price cops when similar radios were posted for 2X their avg. price in the past?

I positively believe that anyone has the right to ask whatever price they want for anything, and similarly, I support the right of anyone to make whatever commentary they like on the price. If sellers OR buyers act in bad faith, I think their less-than-admirable intentions will become apparent to those who wish to conduct business in an equitable fashion. I openly question the motivation of one who knowingly asks 4X market value (when there are no special circumstances to warrant that premium), and I question the motivation of one who suggests it's unreasonable to comment on such a price, characterizing *THAT* as self-serving!? Who's actions appear more likely to be motivated by selfish intent?

Ethan

PS- And to draw a corollary between an internet price cop and an someone picketing a store is ludicrous. A business is a private entity singularly focused on commercial activity. The internet is foremost a forum for the interactive exchange of information, and is one of the only areas of society not simply auxillary to business interests. I'd like it to remain that way.

5827. Clippeton QRO info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-27 00:00:00 UTC
From: Bill Wyatt <bwyatt@onenet.net>
Message-ID: <34A5DCBB.9AE3EE5D@onenet.net>
Source record: 112666

Hi,

thanks for reading this

I have a Dentron Clipperton-L (QRO) that I am
working on for a friend. The amp is in pretty
good
shape and does every thing but work. Has high
voltage, idle current, and keys with the
transmitter
just won't put out any power to speak
of......maybe a few watts. put in 50 get out 10
or so....not
the stuff dreams are made of.....but, what happens
most of the time.....you put more into a project
than you ever get out. BTW the amp was working
fine until, there was a little smoke and then no
puwer out. No smoke damaged components have been
found.

The exciter radio seems to be transmitting into a
very miss-matched load when the amp is placed
in line. I suspect the input matching circuit has
some bad components however, none are burned
and none are damaged. My biggest problem is the
book does not match the amp. The book is for
a Clipperton-L and this is a Clipperton QRO (that
is what is says on the front panel).

The input circuit is different from the schematic
in the book...there are 3 small black 8 legged
devices in the input part of the circuit which do
not show up on the schematic. I suspect they
have to do with the 50 ohm matching on the input
circuit and I suspect one or more is bad. The
problem being I don't know what they are so I
don't know how they should test.

Has anyone dealt with the series of amp and do you
have a manual for it. I will pay any copying
and shipping charges just to get a copy of the
manual and would be most happy with any comments
you might have for me.

Thanks,.

Bill

Hi

If anyone has the diagram to a Kenwood TS-140S, I am trying to determine the proper connection to my SB-221 Linear to key the relay. Standard audio cable coming out of the amp.

Thanks!

Downloading Remember for Windows 95 & Windows NT4 Workstation

Remember is an application which lets you put memos directly on your screen, to definitely get rid of all those littlle yellow papers sticking everywhere on your desk... Remember even lets you have an alarm associated to a note. At the chosen date and time, your memo will appear on the screen. You can even associate a file to a memo. When used in a network, Remember even lets you send notes to other users (with or without an alarm or a file associated).

Remember is very userfriendly. Most of the handlings can be done with the mouse. You can easily move a memo, delete it, associate it to an alarm or a file, send it to another user,...

http://194.78.67.50/frames/Rememberdownload.htm

My Christmas gift.

Hi gang
I recently acquired an Ameco 6 & 2 meter CW and AM transmitter and matching 621 VFO. Unfortunately, no manuals were available. If someone out there has copies of either the original manuals or copies they would sell/send to me, I would appreciate email. Will just figure $3 for Priority Mail to cover shipping.

Thanks.

> What you still
>don't seem to get is why many of us find it offensive.
>Here are a few clues:
>
>- we really care about amateur radio and think our
>reputation as a group is important

--reputation as a group: hmm...wouldn't that depend highly
on what one heard on the air, or saw at a hamfest or club
meeting, instead of the occasional irrational asking price?
>
>- people who take advantage of newcomers by ripping
>them off with outrageous prices turn new amateurs off
>and give us all a bad reputation

--where are these newcomers who are being ripped off?
i've seen posts from possible-newcomers asking about
usual prices for some equipment, & i would tend to give
them some credit as to inquiring about equipment they are
about to buy. for example, i don't think i would worry too much about a
newcomer blowing $1950 on a HRO-500 thinking he is
buying a good novice radio.
>
>- people who 'collect' older gear, never use it and drive
>up the prices will prevent some of us from even owning certain
>radios at all.

--this is a fact of life. do you think your efforts to defend this one
bridge is going to change history? how many other venues are
out there? why is it so damn important to own Certain Radios
anyway? if you really want prices to fall, convince yourself and
all your acquaintances to not want the Certain Radio.
regards, hue

You aren't looking at that crazy thing in the back of the old
RCA tube manual, are you? (I'm just guessing that this is an audio
project?)

>I assume that the venerable 6BE6 is still in plentiful supply, but
>is it still being made?

Hard telling. We still get Russian 6BA6 & 6AU6, so it would make sense

that they'd make 6BE6 too.

> Even so, I'd still like something with
>considerably greater AGC range for the application.

I'd think there would be better ways to do *audio* AGC than
a multi-grid convertor tube, anyway, if that's what you
have in mind.

Allen:
Command Sets are my "big thing," so I just have to chime in.
I've used them for many years and in their original condition,
with dynamotors humming. I've never had a problem with them
drifting.

If you'd like to see my all-original, 1st-production-run
Western Electric SCR-274N Command Set station, or "ARC-5" as
most people call it, point your browser at:

http://pw1.netcom.com/~arc5/blk274n.jpg

I've added all the shock mounts since this picture was taken.
I have several "flavors" of command set stations going
and an extensive collection of them.

5854. Info Needed On Sprague Cap Checker Model Numbering System

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-28 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <684i1m$a3p$1@csu-b.csuohio.edu>
Source record: 112525

Hi,

Does anyone know the Model Numbering Sequuence for Sprague Cap Checkers? And the basic differences in features/specs for the respective model numbers?

Not knowing Sprague's model numbering system, I don't know which model was the top line unit and which was the budget priced unit. For example, which is the better featured unit? A Sprague TO-3; TO-4/TO-4A; or TO-6/T0-6A?

I am looking for a cap checker to work on old instrument/guitar tube amps, but do not know which is the higher model or which models would be suitable.

It seems I see all the Sprague model numbers mentioned above in the $20-$40 range supposedly in good running order, but if I have a choice--I don't know which is the better unit.

Any advice would be appreciated.

Thanks.

5855. Is A Supreme 504-A Tube Tester a Mutual Cond or Emissions Tester?

You are dreaming. Within five years, you'll be buying your underwear online. Retail stores will only exist for window-shopping, and most "information" on the 'net today is second-hand or opinion. Just 5 years ago, you could sit down at your UNIX machine and access nearly every piece of government information in existence by mastering the CLUI. Now, with your GUI and the 'net consumerized, you're just a pissant of the coming global marketplace.

The way you've made major rants over what started clearly as an immaginative humor post thread about excessively-priced gear and the boring twits that constantly jump on same, portrays you as oversensitive, easily baited and needy for personal recognition. You will make an excellent, easily-managed internet customer to those who well-understand behaviorism and technology.

He who dies with the most toys still *dies*, whether they were fairly priced or not. Some of us had a bit of fun along the way, courtesy of the original submitter's outstanding deadpan joke. Too bad you missed out.

Hmmm. And for your insightful contribution to this thread? Display
our posts side by side to any psychologist/psychiatrist, and I think
there'd be unanimous opinion on which of us was more closely fit the
profile of one in need of public recognition.

> You will make an excellent, easily-managed internet
> customer to those who well-understand behaviorism and technology.

Given present trends in "advertising technology" (ie psychology of
advertising appeal), your misdirected spite and sophomoric wisdom
place you more squarely in the "target market" of the future than a
simpleton like me.

>
> He who dies with the most toys still *dies*, whether they were fairly priced or
> not.

And your point? "He who dies with his left testicle having been
forcible removed by government mandate still *dies*, whether it was a
fair act or not." Are you too trying to show your allegiance as a
"pissant", or merely straining towards relevancy, demonstrating more
of that sophomoric wit?

> Some of us had a bit of fun along the way, courtesy of the original
> submitter's outstanding deadpan joke.

If the original post was in fact intended as a joke, bravo, I've been
had. But now, courtesy of your post, I've had some fun along the way
as well. Given your modern savvy, your appreciation for mocking that
which might be construed as out of touch, I'm sure you can appreciate
that.

Ethan

Source record: 112540
Cross-posted to: rec.audio.tubes,rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Can anyone tell me the differences between the various
Hickok Cardmatic tube testers? I've heard it suggested
that some didn't have the button "4" which allows you to
test the "other half" of dual tubes using one card.

If you look at the cards, some have prefixes after the
"model 123", I've seen "B" and "O". Are all the cards
interchangable between units?

Thanks in advance,

I got a Tektronix capacitance/inductance meter from a friend of the family over Xmas. It is an older vacuum tube unit and seems to be in good shape. It fires up, and was last calibrated in 1989(has calibration sticker on it). I do not have a manual for it, but I am sure it is available on the net. I have no need for this unit, but I do need a signal generator. I would like cheap one that does sine/square waves. Eico, heath, whatever you have to offer. I will also take cash if you really want this unit, but would prefer a trade.

Thanks,
Harry Straub

From: Tim Cook <timcook@erinet.com>
Message-ID: <686i9o$nn@eri.erinet.com>
Source record: 112564

For Sale: "Sharp Multiband Deluxe" transistor radio model FV-1800A
17 transistor 6 band AM-FM-LW-SW-MW with a BFO for SSB/CW 14" W x 9"H x 5 1/2"D and weighs 12 lbs without the batteries.
runs off AC or 8 D batteries
has the original operating manual and SW guide under lid in handle.
separate bass and treble audio controls
many external inputs/outputs under cover on back of radio
condition on a scale of 1 to 10 would be a 8 or 9, only because it is missing a small chrome ring that goes over the "power" push button.
works fine.
$80 plus shipping , (it is heavy!)
Please email direct if you are interested. I would also be interested in trading for Ham/SW equipment

I am looking for a manual for the Motorola 1/4 Kilowatt, low-band station, model FSTR 520 BR(AS)1A. Built in the '50s and uses a pair of HK254 or 254W finals. Earlier versions of this beast used 100TH's in the PA, and later versions used 4-125's. The exciter/receiver uses standard 'A' series strips, 829B final. Is anyone out there old enough to remember this station and if so, how about a book gathering mold and dust in a box in the basement or attic. I would like to breath life back into this old beast.

Thanks,

Jon W7FHZ

>
First! remember that the 201 is a receiving tube and should not
dissapate more than
one or two watts in the plate. The 210 is a much more powerful tube. You
can use the 201 for a low power transmitter.

If you have one of the old twist sockets, they often have the pins
marked on the metal shell of the socket. I can tell you that the basing
for the 201 is 1-fil, 2-plate, 3-grid, 4-fil. but it wouldn't do you
much good. If you have a newer tube, with a plastic base, hold it with
the glass envelope away from you and the pins toward you. Turn it so
that the smaller pins are up. The lower left pin is number 1 and they go
counterclockwise.

If it is an older metal and ceramic or wax base, the pins are probably
all the same size. The shell should have a metal locating pin turn this
up and count from the lower left again.

In case my memory has failed over these many years since I worked with
these, check with an ohm meter. The filament pins will be the only ones
which have a measurable resistance. That is, assuming no broken filament
or other problem. If the tube is really a 201, expect the filament to
draw 1 anp at 5 volts. If it is a 201A, expect the filament to draw 1/4
amp at 5 volts.

In fact, it is just barely possible to find tubes with different basing.
In that case, use the ohm meter. Good luck.

Best regards,

Art Borg

1 For Sale PP4763A 28VDC at 50 Amp CCS power supply. Fully metered for DC volts and Amps, 115 or 220/60 Hz primary mains. Massive line filters for both AC and DC power. Fully protected with OVP crowbar and over current. Will handle big dynamotor loads like ART-13, ARC-2, T-195 and later rigs like GRC-106A (which is what it was designed for). Beautiful construction and like new depot pack condition. With documentation (full sized prints). and AC mains cable. Weighs about 130 lbs and will just about max UPS in a big versapack container. Will ship versapack on me for 200 dollars plus UPS on 145 lbs from Sacramento, CA 95827 or pickup at my Sacramento QTH for 185 dollars. I have a few of these in excess to my needs

2. Collins 28VDC to 115VAC/400 Hz solid state inverter. Like new condition, approximately 200 watts capacity, small size, with docs and 9 pin D power connector. 75 dollars plus UPS on 15 lbs (versapack on me).

3. Collins 618T(3) SSB IF module with 500Khz CF USB and LSB mechanical filters (actually complete receiver IF and transmitter SSB 500 Khz exciter. Good filters with complete prints and AM IF module with 500 Khz AM filter 6 Khz b/w and complete audio system for radio also with prints. Filters could be adapted to an R388 receiver as they are small cylinder types. $100 for the two modules First Class post paid conus

4. Collins 618T(3) RF PA module, with pair of 4cx250's (24vdc fils) with servo control module and all documentation. A near KW PEP input the size of a cigar box. $100 post paid conus

5 Collins 618t(3) PTO and HF translator module. K-9 PTO and the complete 3-2 mhz IF system with receiver RF amplifier turrent system and transmitter RF exciter turrent system plus tx and rx mixers. With all docs $100 plus UPS on 15 lbs. will supply versapack.

6 Collins 618t(3) 28VDC to 1800VDC/500 MA power supply. Tested. Lots of those flying saucer high power germanium stud power transistors and great swithing magnetics. $50 plus UPS on 15 lbs. I will versapack.

Other 618T(3) modules available. email me your needs. have a few of these radios with tweaked frames but with good modules and I need the room.

Happy Holidays es 73

Yes, you will find the tube based with short pins as the
UV101/UV201/UV301.... Standard size 4 pin versions have
the UX prefix.

Globe 45 and globe shaped 50 triodes were used in large
numbers by early hams. Unfortunately, due to the demand
of the audiophiles, these early triodes now cost up to 75
dollars for a good new 45 globe, and hundreds of dollars
for a NOS globe 50.

Ethan, one of the price-cops who send me an unsolicited price-cop email, said something to the effect "Why don't you start contributing something worthwhile to this NG..."

When a small handful of us were fighting for the creation of this NG against a rather powerful group of news admins (who didn't even like the name we'd chosen for this NG), where were you, Ethan? I don't recall you contributing *anything* at all by way of assisting us in convincing the folks who control the creation of NGs, that the time had come for adding a r.r.a.ba to the r.r.a hierarchy. But don't let your failure to act interfere with enjoying the fruits of our labour. Feel free to be as critical as you please.

Tell us about yourself: Callsign, years licensed, BAs you've owned... We'd be glad to welcome you aboard as a friend.

73 (if you're not licensed, that means "Best regards"),
Jeff KH2PZ / 7

5910. Lafayette schematics/manuals needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-29 00:00:00 UTC
From: commquart@aol.com
Message-ID: <19971229023401.VAA02732@ladder02.news.aol.com>
Source record: 112581

An older, retired gentleman has written to me looking for help finding the manuals and/or schematics for his vintage Lafayette HA-52 FM comm receiver, and a Lafayette HA-55 aircraft com. receiver. Can anyone pass along a source for these manuals, or at least where he might order copies of the schematics.

The fellow is also looking for a working HA-50 lowband FM receiver if anyone can provide a lead....

Please E-mail me and I will write the gentleman back.
Thankyou for helping out an old-timer.

Having Owned a Drake T4X and R4 I will make a few comments....it has been a few years so please excuse any errors in my memory.

The The progression in the receiver was to ad more solid state...seems there was an FET mixer in the later versions...though still far from a solid state rig. Maybe some transistors in the audio stage.

The Transmitter, I think, Had up dates in the mic audio stages to solid state. I have no more. I do wish I still had my old Drake pair...I sold them after I bought Kenwood T-599 R-599 "Kenwood Twins". I Don't think the Kenwoods were near the radios the Kenwood's were but a friend wanted to buy the Drakes. I Had and Used the Kenwoods up until about 1991 when I sold the Kenwoods to ZD7DP, Desmond Peters on the Island of St. Helena, who is still using them.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades High End computer EQ. will be considered. All working last time tested unless noted.
Thanks

• Kenwood TS-820S - Digital Ham Transceiver 160-10 meters. Looks good and works well. $400

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $250

• Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks good and works well. 250-300W PEP output on SSB. $225.

• Siltronix VFO Model 80. $75

• National Two/Seventy Ham Receiver with 6 Meter band. All Tube with matching speaker $250.

National 188 Receiver not working, but all parts appear to be there. appearance on scale from 1-10 would be 6. Best offer over $50+Shipping

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$125

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $150

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

• Pro 62 - As new. Purchased 4-5 months ago. Still under warranty. Have original sales receipt box manual etc. It is triple conversion Hyperscan 200 channel scan covers from 30-960 MHz. $150+ shipping.

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150

• Sams CB Photofact- Several volums, some continous: numbers as follow: Continous 1- 55 and 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226. Also have some two of same number. $5 each.

• AR Inc.- Stereo Amp, all solid state. $125

• Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $100

• Craig- 6" Reel to Reel Stereo Tape Recorder. $50

5916. LMO for SB-303 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-29 00:00:00 UTC

Message-ID: <883407035.330170376@dejanews.com>
Source record: 112587

Help !

Need working solid state LMO for the SB-303 receiver.
TRW 800668 / Heath 110-48

The one I have has no output. The receiver suffered a
power supply failure and took out the LMO.
Are there any schematics out there for these LMOs?

Need the LMO dial, mine is cracked.
I would be interested in a SB-303 for parts.

Please E-mail me, any and all help is appreciated.

Thanks, and 73'

5917. WTB: old style IF trans for Emerson

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-29 00:00:00 UTC
From: Al Schapira <schapira@lucent.com>
Message-ID: <34A7C893.41C67EA6@lucent.com>
Source record: 112588
Cross-posted to: rec.antiques.radio+phono,sci.electronics.repair,rec.radio.amateur.boatanchors

Greetings:

Does anyone have (or know of a source for) real old input and output 455 kc
IF transformers? (They're old, so I say kc not KHz) I need them for
an Emerson model CS-272 (ca 1939) AM/SW table radio. I'm talking old style
IF's -- not 3/4" or 1" slug tuned cans.

The 1st (input) IF transformer is in a 1 1/4 square can, trimmer tuned, not
slug tuned, top of chassis clip/slot mounting with Red/Blue/Black leads from
the bottom and a Green (grid) lead from the top. Emerson part no
6QT-480.

The 2nd (output) IF transformer is not in a can. Its just the guts -- a
ceramic dual compression trimmer on which is mounted the transformer coils,
wax coated, with Red/Blue/Black/Green leads, mounted to the underside of the
chassis rear apron. Emerson part no 4XT-435D.

Why do I need them? Both primaries are open. :-(

Thanks for any leads you can provide.

-Al Schapira

Message-ID: <34A7D133.7129565B@pacbell.net>
Source record: 112591

I'm looking for a FEMALE 9-pin keyed (like Octal tube base) connector for a power cord on a Collins 51S-1. I know they are available from some commercial places and command a ridiculous price. Anybody have one for a reasonable price?

I was offered one by a San Francisco ham and when it finally arrived, it was the wrong sex! I need a FEMALE. Sure appreciate getting one so I can stop using clip leads and a suicide cord to get AC into the receiver to try to get it running right!

Please remove XXX from my e-mail address.

Ian, K6SDE

Looking for an old AM Broadcast transmitter that I can convert for
75 meter AM use. Something like a BC1G, Collins 820, or anything that
is big, heavy, does 500-1000watts, and has a neat observation window.
Email me price, condition, approx weight, and location. I would prefer
east coast so I can pick up but would consider shipping via truck
frieght if it is possible.
Thanks and have a great new year!
Jim

> Bob LaRose N6OJZ

These twisted wire caps were simply that...to couple a BFO to a
mixer/rf stage, they usually just twisted insulated wires together
to get a couple of picofarads capacitance for coupling, usually a
few turns twisted together sufficed. Also called a 'gimmick'. In
some Rcv'rs, like the S-38's, they coupled the CW BFO by running
an inulated wire to the vicinity of the mixer tube socket.

From: cwsenn@aol.com
Message-ID: <19971229191301.OAA18777@ladder02.news.aol.com>
Source record: 112596

I had one open once on a SB313 which is the same LMO. It had a mechanical problem but I don't remember seeing any strange or exotic electronic parts inside. Probably common trouble shooting will locate the bad component(s). Seems like I remember that the LMO oscillates from 5.5 to 5.0 Mhz so it should be easy to measure with a freq counter once working. Be careful of the mechanical stops which set the frequency range. They are a real "booger" to set right.

Hello and Happy New Year Everyone,

I have a Hallicrafters SX-111 that I recently picked up for the purpose of parting out. I know that many of the fine folk here in the group have these receivers and might need some parts. Someone has removed several of the R's and C's from it and has made some mods that don't look like they were finished. The unit is complete and I have the original manual, so let me know what you need. First come, first served!

Strange coincidence. I just picked up a complete set of Webster Bandspanner coils (rated at one kilowatt) new in the original packing tubes: 80, 40, 20, 15 and 10 meters. Beautiful units cast in a translucent white plastic with the company logo. This quality of merchandise for amateur radio is no longer produced.

What do you need? I can send you copies of the stinger dimension graphs for the bands but there is no mention of the base dimensions.

Not really much in the way of docs but that's all there was in the sealed tubes.

5943. FS: Collins 302C-3 Directional Wattmeter NEW

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-29 00:00:00 UTC
From: Hal Waite <halwaite@sprintmail.com>
Message-ID: <34A88F8A.26F3@sprintmail.com>
Source record: 112614

This directional wattmeter consists of a separate directional coupler and an indicator unit. This item is round label in the original plastic wrap, just as it left the factory, and the cable has never been soldered to the directional coupler. A real beauty.

I have never made a "best offer" posting and have even criticized this practice in the group rec.radio.swap but I do not know the value of such a collectors item. I have used Collins gear in the past but I do not collect Collins; it's too pricey. With that caveat, I would like offers on this fine unit.

Greetings,

I have an ICOM IC-251A that has be tuned up ICOM. Comes with the manual, new desk microphone, and an IC-SM-5 desk microphone. Only $485 Shipped.

KENWOOD TS-520SE with hand microphone,original manual and carton. Excellent shape. Covers 10-160 meters minus WARC. Only $350 shipped.

KENWOOD TH-77A 2/440 Dual-Band Hand Held. Checked by Kenwood recently. Modified for extended transmit and recieve, aircraft/2m/440/800mhz. Includes KSC-7 Desk Charger, BT-6 Battery Case, Rechargeable Battery, orginial manual, container, and modification sheets. Shipped to your door for $295.

VHF ENGINEERING PA140/10 2 meter VHF Amplifier. Large heat sinks. No manual, obtained in a trade. Only FM mode. Shipped for $125.

KANTRONICS KAM PLUS, with Host Master II+ software, only $275 Shipped. This is my second KAM and very little use. MINT condition.

Radio Shack DSP-40 Digital Signal Processor, New in Box, Shipped for $60. One opened, used in excellent condition for $45.

TUCKER T-1000 300 watt Antenna Tuner, (same as Vectronics VC-300DLP), shipped at $120.

Looking for an HF AMP for 10-160 to include WARC/MARS. Will trade towards and depends on the model and age, include $$$ for the difference. Will consider 80A/B and Alpha amps -

Also looking for ICOM IC-706 radio with or without separation kit.

Yea, Depends on how much time and money your willing to spend.

If you got the money and no time - contact www.tubesandmore.com - they can sell you a new one or just do a search under "Tubes" or "Old Radios" and I am sure you can find more vendors.... but....If you got the time...

You can go to the Salvation Army and pickup a old tube clock radio for a few bucks - it's got plenty of sockets and other goodies you might need.

If your lucky enough to find a B&W tube TV - pick up that as well. The horizontal sweep tube is worth $25 to $50 by itself. Don't forget that power transformer, it's also worth quite a bit if purchased new.

It's a great way to learn about electronics and buildup your old tube parts stock.

19 Set Net Report -- December 1997
By Dave Lawrence, VA3ORP
email va3orp@kos.net

INTRODUCTION

1. The monthly 19 Set Net was held at its regular time of 2000Z
on 3760 KHz (LSB) on 7 Dec 97 (first Sunday of the month). There were
13 check-ins (VA3ORP-Dave, VE3ORP-Ron, VE3DPC-Frank, VE3RIH- Alan,
VE3CBK-Chris, VE3FYR-Fred, VE3POS-John, W1NU-Vic, VE3NKK- Dave,
WF2U-Meir, VE3CFY-Bill, VE3AZA-Chuck, VE3FKQ-Frank).

DISCUSSION

2. Correspondence/Visits. There have been a number of EMail
messages between VA3ORP and IK0MOZ reference a trans-Atlantic 19 Set
sked. Details below.

3. Previous Events.

a. 11 Nov - The Remembrance Day sked organized by VE1NU-
Reed, was very successful. Six contacts were made with the
furthest station being VE3BDB-Bob in Orillia. Unfortunately
Reed was using a modern set to receive so his contact with
VE3BDB (who was using a 19 Set for Tx and RX), cannot count
towards the longest 19 Set QSO recognition.

b. 16 Nov - The Ottawa Militaria Show had little communications
equipment on display - only a
Type D Mk V field phone. It was a good opportunity for VE3CBK, VE3ORP
& VA3ORP to have an eyeball QSO.

4. Upcoming Events.

a. 13, 20 & 27 Dec - Trans-Atlantic Sked. This is being
organized between the "19 Set Group" and the Italian "Army
rig Operators Club"s. Procedures will be as outlined in
"PROCEDURES - 19 SET GROUP - CW NET (ver 2.2, 11 Sep 97)".

Additional details are as follows:
Time/Freq: 0500-0530Z on 7005 KHz
0530-0600Z on 3705 KHz
Net Control: VA3ORP (Dave, 20 Km NE of Kingston)
Mode: A1 (CW) at 12 WPM
North American stations will be called in beginning at 0445Z. Trans-Atlantic work to start at 0500Z. Net Control Station will be using modern equipment with 100 watts and both vertical and horizontal antennae available. NOTE: THIS IS A DIRECTED NET! Participating station to be on time and on frequency. Priority will be given to 19 Sets as the objective of this sked is to complete a trans-atlantic 19 Set/19 Set QSO. Propagation should be good for the 13th and 27th but is forecast to be very noisy on the 20th.

b. 17 Dec - There will be a small display of vintage computers at the Military Communications and Electronics Museum. This is in conjunction with a commercial display. Hard to think of 20 year old gear as being vintage! (do you remember CP/M? - it was BD; that is - Before DOS)

5. Members' Activities

a. VA3ORP/VE3RCS. The 19 Set in the Museum is now operational and available for use on Thursdays. The Thursday sked amongst VE3RCS, VE3RIH & VE3FYR has been named the "Old Sweats Net". Any military folks are welcome to drop in at 1000 EST, 3760 KHz (alternate 7060 KHz). Some additional information was found concerning the "Alexanderson Alternator" (see the HMCS Haida web page link below)

b. VE3ORP. Waiting for the fleamarket season to start up again. Some old gear is showing up on Sunday Night Swap Net (details of an AR-88 passed to WF2U). Had some details concerning a REALLY BIG antenna problem (Omega antenna in Hawaii).

c. VE3DPC. Frank has a Command Set (both tx & rx) in good condition but needs some tubes for the receiver.

d. VE3RIH. Alan continues to do a lot of operating with his 19 Set. Claims to be the only "authentic" set on the air as he runs off of battery and dynamotor! (bet his sulfuric acid isn't 50 years old!) Alan is available for all three trans-Atlantic skeds.

e. VE3CBK. Chris is available for all three trans-Atlantic skeds.

f. VE3FYR. Enjoys listening to the comments about the vintage sets. The closest Fred actually got to military radios was the PTT switch in a Hurricane fighter during WWII.

g. VE3POS. Relayed the story of his first purchase of a 19 Set from Hercules Sales in Toronto for $48 (THAT was some time ago!)

h. W1NU. Vic gave a run down on the modifications that he has done to his 19 Set over the years. He checked his log book and confirmed that he has been using that set since 1947 when he bought it, in new condition, for $1.00. Vic is available for all three trans-Atlantic skeds. (LATE ENTRY: On 8 Dec 97, Vic worked a station in Denmark on 80 M using his 19 Set! Well done Vic).

i. VE3NKK. Dave needs some info on the W.S. No. 29 "B Set". VA3ORP will check the Museum archive.

j. WF2U. Meir got another 19 Set in very good condition and with most of the accessories. He will try to have it on the air for the 8 Dec 97 CW Net (how much was the shipping from British Columbia?) Still looking for information on the RCAF AT-12 (will send photo to VA3ORP).

k. VE3CFY. Greetings from Bill. Glad to hear you on the CW net from time-to-time.

l. VE3AZA. Had some interesting comments about using a spark transmitter at King Edward Collegiate (Vancouver?) in 1939. May check-in to the CW net with one of his 6L6 home brew transmitters.

k. VE3FKQ. Hopes to get to the Museum for a tour of the back room. Maybe Frank can help identify some of the foreign military sets.

6. Ongoing Projects:

a. 19 Set Web Page. This just keeps getting better! Great work by VE3BDB - Bob. Lots of check-ins from all over the world. Some "Wants" and "For Sale" items listed.

b. CW Net. Going well and the training seems to be paying off. Participants are asked to use their dummy load for frequency spotting or, better yet, zero beat using the proper procedure! (set to "R/T", "Net" switch ON, adjust for zero beat, return to "W/T"). As propagation changes it may be necessary to move to the "blue" frequency (7033 KHz).

ADJOURNMENT

7. The net adjourned at 2157Z. QRX Sunday, 4th January 1998 at 2000Z on 3760 KHz (alternate frequency 7060 KHz).

73 es cul de Dave, VA3ORP@VE3CDY.#EON.ON.CAN.NA
(EMail va3orp@kos.net)

...chirp chirp

Monthly 19 Set Net

Join us on regular lower sideband at 2000Z on 3760 KHz (+/-) on the first Sunday of each month to chat about 19s and other older military radio gear. Control station: VA3ORP

Weekly 19 Set Net

Each Monday night, 2330Z (1930 EDST) on 3703 KHz, CW operation. Fun stuff. You don't need a 19 Set to participate but you may hear the distinctive "warbling chirp". Note: this a directed net and the control station directs ALL activity; CW speed is to be kept at 10 WPM with correct spacing; if using a 19 Set, please re-tune often in order to stay on frequency (digital receiver for side tone and frequency control essential). Control station VA3ORP.

Watch Amateur Radio Packet for messages to "19_Set" after each monthly net!

Events Involving 19 Sets

Sep 4-7, 98 (repeat 1998) - Reunion 98 at CFB Kingston, Ont.

If you know of any events featuring the 19, please let us know!

5954. WTB: old style IF trans for Emerson SW

Newsgroup: rec.radio.amateur.boatanchors
Date: 1997-12-30 00:00:00 UTC
From: Al Schapira <schapira@lucent.com>
Message-ID: <34A90C44.2781E494@lucent.com>
Source record: 112477

Greetings:

Does anyone have (or know of a source for) real old input and output 455 kc IF transformers? (They're old, so I say kc not KHz) I need them for an Emerson model CS-272 (ca 1939) AM/SW table radio. I'm talking old style IF's -- not 3/4" or 1" slug tuned cans.

The 1st (input) IF transformer is in a 1 1/4 square can, trimmer tuned, not slug tuned, top of chassis clip/slot mounting with Red/Blue/Black leads from the bottom and a Green (grid) lead from the top. Emerson part no 6QT-480.

The 2nd (output) IF transformer is not in a can. Its just the guts -- a ceramic dual compression trimmer on which is mounted the transformer coils, wax coated, with Red/Blue/Black/Green leads, mounted to the underside of the chassis rear apron. Emerson part no 4XT-435D.

Why do I need them? Both primaries are open. :-(

Thanks for any leads you can provide.

-Al Schapira

I have a Delta Electronics, ISB-1 sideband converter for an R390A and need a book/documentation for it. I need to check hook up and have some operational quesitons.

Can anyone help?

Thanks!

"Bandspanner coils"? Did Webster make a Hustler lookalike?

I believe the Bandspanner the other gentleman was talking about was the all-band antenna with the loo-o-o-ong slender base containing about a 36" long coil. The whip portion of the antenna made contact with the coil through a circular spring that slid inside the base. By moving the whip up and down in the base, the antenna could be tuned between 10-80 meters. The whip actually had the band points engraved in it. These antennas were made in the 60s and work beautifully. My wife has one on her Bronco and it is as beautiful as the day it was made.

Anyway, what you are describing, Hal, sounds like the old reliable Hustler with the large 1KW coils.

I'm confused. . . .

I applaud and commend your well stated viewpoint. Would it be fair to say that the biggest problem you have is with speculators who buy only because of some perceived investment value in the object but without any appreciation for what the object is, does, or represents? Such speculation has ruined many hobbies by driving the prices higher than the hobbiests can afford.

>functions" and then has nothing to do with either supply or demand?
>The Lone Ranger's companion would say you speak with forked tongue.

The demand curve is determined by the set of all potential buyers.
The supply curve is determined by the set of all potential sellers.
This seller is only one of the latter. He can have no effect on the
demand curve, and only a tiny effect on the supply curve (since he is
only one of many suppliers.) The seller is free to ask any price, it
doesn't move the supply or demand curves.

Of course if he's a long way from the intersection of the two curves
he'll either sell it instantly or not at all.

I should add that the other poster who commented that all this depends
on complete information for everyone is exactly right. And that is
where I believe your real objection comes in.

>In either case I agree, it is a matter more of ethics than economics.
>Even honesty. I would urge you to direct your future comments re:
>ethics vs. economics to the gentleman who initiated this line of
>discussion.

I only posted because I felt that your economic argument was weak and
really missed your central point which I THINK is the ethical one. In
the ethical question I believe you and I are in agreement.

Hi Gang:

I have two R390As for sale:

#1 is Collins Ser.#4149 Order#8719-P-55...though it does not have many of its original modules left after all these years...mostly EAC and Cosmos...Has allnew tubes including 3TF7....has original meters, top and bottom covers and comes in its original Navy shockmount rack cabinet...asking 400+shipping...the only modification is the PL-259 jack on the back...works excellent and is perfectly aligned....Plug in and play.

#2 is a EAC which I bought as a spare for the above radio...it also has all new tubes, original meters, top and bottom covers but no cabinet...this set has a bad audio module (the radio works with a good module plugged in) and needs its new Cosmos PTO aligned (I will send the old PTO along also).
Asking $275+shipping.

I purchased bot of these radios at Fair Radio Sales, who will sell you any of the modules or parts....I am willing will to deliver anywhere in the Los Angeles or San Diego area...e-mail or my phone in Los Angeles is (310)823-4456

I also have a National NC-88 for $50+shipping...clean and working....JaySimmons

From: Hal Waite <halwaite@sprintmail.com>
Message-ID: <34A9FAD3.42EF@sprintmail.com>
Source record: 112503

I have two of the above tubes which I inquired about after seeing the price listed by AES. There seemed to be considerable interest expressed by many Champion owners in purchasing these tubes at a "reasonable price".

I noted one listing for two tubes at $160 + shipping. On this basis, I believe that a reasonable price would be $145 for the two including shipping within CONUS. That seems reasonable.

These tubes are made in Holland and so marked. The boxes had not been opened until I examined the contents.

According to DL2IE Gerhard B.Salzmann: Kommerzielle Nachrichtenger&#65533;te
von 1914-1945, page 52 it is used in the following equipment:
E227, GuG227, Ha5K39a, Ha5k39b, Ha5K39c, RPG4, RPG4/3, W17
A picture of the valve is shown in
DL6VW Werner Gierlach: Handbuch der Wehrmachtr&#65533;hren (1989). According
to the circuit diagram only 5.4mA flows to the voltage regulator, so
any regulator valve; OA2, 150B2 or other will work as replacement,
perhaps VR150/30 is the nearest physical replacement, but OA2 (it is
different physical sizes) may fit inside an old socket. I used OA2
with pin cut mounted inside the socket for my Zielflugempf&#65533;nger EZ6
(150-1200kHz DF receiver).

The application as mains indicator is normal for a neon indicator
lamp, similar types are used in large extent in many countries, they
often have a series resistor mounted inside the bulb.

Some time ago I posted an inquiry as to sourcing CoverCraft equipment dust covers. Several replies pointed me to Surplus Sales of Nebraska. I ordered (2) covers, to fit a KWM-2, and a 30L-1. They arrived today. They look great, but they are *way* too small to fit the equipment. I have to believe that these particular covers must be amoung the more popular sellers, so I am also annoyed that the came without any caution as to fit problems. In addition to being too small to reach from side-to side, the 30L-1 cover comes down too far in the back, where it fouls with the ALC and Switching lines.

So if you saw my post, and the answer, you should also consider this user report.

I have the opportunity to buy a near mint Alpha 76PA (3 tube, standard transformer) at a good price. I understand the replacement tubes are expensive and hard to get? The tubes in this amp have hardly been used and show no discoloration and the rubberized chimneys are just like new but I wonder what the average lifespan of them is? Are there any special problems with this amp? Any info would be appreciated as I have to make up my mind in a couple of days.

Thanks

Ed Scissons VE5VX

Ed,

The tubes are getting hard to get and new cost about $300 - $400 USD.
Svetlana has started making them but they are in the same price range.

These tubes are not know for their long life. They were short-lived in
commercial practice because of this. They have a short (by amateur
standards) life when used at rated output (less than 2000 hours). Most hams
run them far beyond rated out with the resultant VERY short life. They are
only rated for 500 watts each in PEP service. That says for the 76 PA 1500
watts max. Alot of hams run these amps at 2000+ out, of course they buy
new tubes every year or so...

The 76PA is a very good amplifier. Folks are now converting them to a pair
of 3CX800A7s which have a much longer life span. Check out Dick Byrd's web
page at http://n4uq.home.mindspring.com Lot's of info on Alpha upgrades
here.

Hope this helps.

73, George K8BRW

To my knowledge, there are no domestic miniature vacuum tubes (eg. 6BE6, 6BA6, etc) in production at this time. All US and European glass vacuum tube manufacturers have long ceased production. I understand Svetlana (Russia) is making some hi end receiving tubes, but doubt they're making the 6BE6's. Have a feeling only way to get one in "new condition" would be to buy NOS - new , old stock. Fortunately, the 6BE6 was a popular tube and there were thousands produced prior to the 1980s, so you shouldn't have too much trouble finding a good one. Bob, K3AC

Subject: FS: 12BY7/12DQ7

I have (16) NOS 12BY7A (RCA, GE, etc.) for sale @ $6.00 ea. All are tested, in original boxes.

(10) Used, tested 12BY7A, $3.00 ea. The prices listed are even better in most cases than the AES sale flyer!

Shipping is additional (usually $3.00 for Priority Mail).

Since I began posting tubes in this group I've dealt with a considerable number of boatanchor owners, and I've found them to be a pleasure to deal with. I'm sure they'd say the same about the purchases they made form me!

Please e-mail me if interested. Thanks.

Need copy of owner's manual (detailed instruction manual) for Zenith
Transoceanic, Model A600L, chassis 6A40-6A41

Thanks,

Ben Wallace
